**WE UNLEASH
THE MUSIC
IN YOU.™**

The INCREDIBLE MUSICAL KEYBOARD™

transforms your computer into an exciting musical instrument.

The Incredible Musical Keyboard can do more than turn your Commodore into a music synthesizer.

Deep within every Commodore 64 lurks the unexpected. A versatile music synthesizer. A music video machine. A three track recorder. And a way to create music that's so easy you'll be playing songs within minutes.

Just place the Incredible Musical Keyboard over the computer keyboard, load the included music software diskette, and you have all you need to make piano, guitar, synthesizer and electronic sounds.

Everything you need to create music is included . . . whether you're a beginner or an accomplished musician.

If you can press a few keys, you have all the skills it takes to create and play music with the Incredible Musical Keyboard.

Just beginning? Attach the included ABC key stickers to the keys and match the letter in the note with the letter on the key and . . . PRESTO! . . . you're playing music instantly. It's easy. It's fun. It unleashes the music in you . . . even if you don't read music.

You already read music? Great! We've included a Melody Chord Songbook featuring hits from today's top recording artists. Or play songs from your own sheet music.

The Incredible Musical Keyboard works with other exciting Sight & Sound Music Software programs, too!

Get the **KAWASAKI SYNTHESIZER** and transform your Commodore 64 into a sophisticated music synthesizer and sound processor. With one keystroke, you can control waveforms, vibrato, sweep and other special effects. Let your imagination soar with the **KAWASAKI RHYTHM ROCKER** creating and recording your own songs while you control eye-popping color graphics that explode across the screen. Create your own music with the **MUSIC PROCESSOR**, a word processor for music. Then record it, edit it and play it back. Use the 99 preset instrument and special effects sounds for endless new creations. Or travel through a complete tutorial on music synthesis with the newest Sight & Sound music program, **3001 SOUND ODYSSEY**. After you've learned the basics of music synthesis, you can use the complex music synthesizer included in the program to

compose your own music, create your own sound effects or simply experiment with the hundreds of pre-programmed sounds.

From the Incredible Musical keyboard to software that plays your favorite hits, we've got them all.

Look for the Incredible Musical Keyboard and the complete line of Sight & Sound music software at your local computer software outlets and music stores. And unleash the music in you.

For more information and a free catalog, phone 1-414-784-5850 or write P.O. Box 27, New Berlin, WI 53151.

Trivia Fever™

**"The Hottest
New Game In Town"**

Trivia Fever is absolutely unique — it's the only software entertainment package that can be enjoyed **with** or **without** a home computer! When played on your home computer, Trivia Fever is a refreshing alternative to all those shoot'em up games. An elected "Master of the Game" uses the computer to randomly select subject categories, handicap players, generate questions and answers, keep score automatically, and more! Instructive by its very nature, Trivia Fever can be enjoyed by up to 8 individuals or teams. And when played without a computer, Trivia Fever has all the best features of the "popular" trivia games plus more — all without the cumbersome board, cards, and little game pieces. You can play in a car, on vacation, anytime, anywhere! And Trivia Fever is by far the best Trivia game available anywhere. Here's why:

Trivia Fever offers thousands of challenging questions in 7 interesting categories, so there's something for everyone. Each category has questions with 3 levels of difficulty, which score comparable points. What's more, Trivia Fever allows players to HANDICAP all those so-called "trivia experts" three different ways, giving everyone a chance to win. And players can easily control the length of play from quick thirty minute games to multi-hour party marathons!

Trivia Fever is unique, entertaining, educational, and most of all FUN. And at \$39.95, Trivia Fever is destined to quickly become the best selling software entertainment package of all time. There's even a \$5 rebate available to any non-computer users who return the computer diskette.

Trivia Fever can be enjoyed on the Commodore 64, IBM PC & PCjr and compatibles, Apple II series, and others. So don't delay. Catch Trivia Fever at your favorite software retailer today!

For additional information call 617-444-5224, or write to:

At \$39.95, Trivia Fever comes complete with Question and Answer Book, Category Selector, and Tally Sheets to be used when played without a computer.

Why every kid should ha

Today, there are more Apples in schools than any other computer.

Unfortunately, there are still more kids in schools than Apples.

So innocent youngsters (like your own) may have to fend off packs of bully nerds to get some time on a computer.

Which is why it makes good sense to buy them an Apple® IIc Personal Computer of their very own.

The IIc is just like the leading computer in education, the Apple IIe. Only smaller. About the size of a three-ring notebook, to be exact.

Even the price of the IIc is small — under \$1100.*

Of course, since the IIc is the legitimate offspring of the IIe, it can access the world's largest library of educational software. Everything from Stickybear Shapes™

programs in all. More than a few of which you might be interested in yourself.

For example, 3-in-1 integrated business software. Home accounting and tax

With a IIc, your kid can do something constructive after school. Like learn to write stories. Or learn to fly. Or even learn something slightly more advanced. Like multivariable calculus.

for preschoolers to SAT test preparation programs for college hopefuls.

In fact, the IIc can run* over 10,000

programs. Diet and fitness programs.

Not to mention fun programs for the whole family. Like "Genetic Mapping" and

Have an Apple after school.

"Enzyme Kinetics."

And the Apple IIc comes complete with everything you need to start computing in one box.

Including a free 4-diskette course to teach you how—when your kids get tired of your questions.

An RF modulator that can turn almost any TV into a monitor.

As well as a long list of built-in features that would add about \$800 to the cost of a smaller-minded computer.

128K of internal memory—twice

the power of the average office computer.

A built-in disk drive that would drive up the price of a less-senior machine.

And built-in electronics for adding accessories like a printer, a modem, an AppleMouse or an extra disk drive when the time comes.

So while your children's shoe sizes and appetites continue to grow at an alarming rate, there's one thing you know can keep up with them. Their Apple IIc.

To learn more about it, visit any authorized Apple dealer. Or talk to your own computer experts.

As soon

as they get home from school.

In its optional carrying case, the IIc can even run away from home.

EDITOR'S NOTE

THE BEST-EVER END TO SHOPPING BLUES

I've talked to several people who took one trip to the store and ended up more intimidated by shopping for a computer than by learning to use one. A single factor makes shopping so painful: lack of knowledge.

Editorial research we've conducted indicates that our readers most appreciate the basic kinds of help we provide to make buying decisions easier. That means easy-to-understand product information and articles that simulate the shopping situation, accompanied by guidelines to making the task a lot easier.

Since people are especially concerned with shopping during the holidays, we decided now was the time to put the emphasis there. So we worked especially hard this month to beat the boast on our cover. And we feel pretty secure that we've delivered on our promise—"The Best-Ever Shopping Guide"—to arm you with the understanding and the facts you need to make the right purchases. This issue will guide you in buying hardware, software, and a wide range of peripherals and computer accessories to consider as gifts.

Two bonus services that should also come in handy are "Diary of a Computer Shopper" (page 60), useful for both the novice and the out-of-practice or out-of-patience shopper, and our compilation of special software offers (page 55) that will help you find good software and good deals.

A first for us this month is "Murder at 220 Merrill" (page 74), a novel piece of computer fiction. We were beguiled by author Jeanie Ransom's unusual slant on adventure games (in her first piece of published fiction) when the manuscript reached our office, and hope that you share our enthusiasm.

When talking about "best-ers" it's impossible to overlook our staff. I'm glad I have this opportunity to

thank them here for all they've done to make life at FAMILY COMPUTING the best working experience I can imagine. So thank you Vincent and James, Laura, Nick, June, Lance, John J., and John W., Joey (and Elaine and newborn Erin, in California), Sarah and Bill, Roxane, Linda and Kathryn, Karen and Suzie, and Annie, to round off our editorial and art staff. For running our business, thanks to Shirrel, Steve A., Glenn, Charlene, Harold, David and Michael, Deede, John S., Lisa and Pat, Robin, Virginia and Kay, and Lou, Bruce, Steve R., Deborah, and Brenda, Steve T., Millie, Susan, Marianne, Carol, Megan, and Anne.

And to all our contributing editors, who come through for us each month, thanks to Jamie, Peter, Chuck, Tony, Mindy and Becky, Jeff, and Robin, and to Joe and Steven. And I don't want to forget our regular contributors, our printer, Quad/Graphics, color separator, Impact Graphics, and typesetter, Cosmos.

Above all, a very special expression of thanks to the hundreds of thousands of readers whom we keep in mind every month as we create each issue, we hope the way you want it. You've been responsible for giving me FAMILY COMPUTING, the best present I've ever had—any season. Happy holidays to you all!

LETTERS

A TEACHER'S AIDE

I am writing to tell you how happy I am to have discovered FAMILY COMPUTING. I have recently bought a VIC-20 computer for use in my classroom. I have been dismayed at the lack of software available. Your April issue listed actual programs I can use with the VIC-20. Plus it offered an article that guided me toward two videolike games I can buy with confidence, and steered me clear of wasting money on less than perfect games.

MRS. SHEBAR
Freeport, New York

LOOKING FOR COMPETITION?

"The Secrets of Teenage Software Stars" (September 1984 issue) included entering computer competitions as a way of making a name for yourself in the computer industry. Recently, as contestants in the Apple Computer Clubs' Competition '84, more than 40 youngsters and computer club advisers made a name for themselves!

A panel of five judges, who are experts in educational computing, selected six projects as winners. More than \$100,000 worth of computer equipment and prize money was awarded nationally.

I invite FAMILY COMPUTING readers associated with schools and youth organizations to form a computer club and join in the 1985 Apple Computer Clubs' Competition. For information and club guidelines, write to the Apple Computer Clubs, P.O. Box 948, Lowell, MA 01853. The 1985 competition promises to be even bigger and more exciting than the 1984 competition! Who knows, maybe a FAMILY COMPUTING readers' youth group will win \$1000s worth of Apple computer hardware and software.

JOHN D. MARVELLE
Associate Director,
Apple Computer Clubs
Lowell, Massachusetts

A TOP 10 RATING

I guess you can say I enjoy computers and reading FAMILY COMPUTING.

Your graphics programs entertain me for hours and hours. Your finest graphics program was *Portrait* (July 1984 issue). I have had so much fun drawing pictures. Whenever I get a magazine in the mail from your company, I am thrilled.

On a scale of 1 to 10, you're a fabulous "10." Keep up the good work guys.

ANTHONY TODD, age 12
San Jose, California

THE SOFTWARE BEHIND THE HARDWARE

I have enjoyed your magazine since it first appeared last year. Your articles have been interesting as well as informative. As I was reading the September Letters column, I took note of an item that hit close to home. In answer to a reader's question, you wrote that the Commodore 64 version of the KoalaPad is used to do the Basic Booth cartoon. While I was pleased to hear of its practical application, I feel that you told half the story. Behind every piece of great hardware is a great piece of software. In this case the software for

The computer monitor so ingenious,

If you're torn between buying a dedicated monitor and making do with your regular TV, there's a smarter alternative. The General Electric Monitor/TV.

First and foremost, it's a computer monitor.

Compatible with all major computer brands, it combines these advanced features to sharpen text and graphics and deliver a display that's easy-on-the-eyes: Direct and split video inputs; 320-line resolution via a comb filter; plus a computer grade, .5mm-pitch Neovision™ picture system.

For the name of your nearest dealer, call The GE Answer Center™ Information Service, 1-800-626-2000.

the Commodore 64 KoalaPad is *KoalaPainter*, written by Audio Light, Inc. Thank you for the opportunity to clarify a point.

PETER D. WICKMAN
Audio Light, Inc.
Los Gatos, California

IN SEARCH OF SOFTWARE

In your November 1983 issue, there was an article, "Software for Preschoolers." The software *Hodge Podge* was highly recommended. It was great, reasonably priced, and by Dynacomp. The only problem is, we still have not been able to locate this software, or the address of Dynacomp. Can you help us out? We have one Apple IIe and four preschoolers badly in need of programs designed for their age level.

MR. & MRS. HENRY A. KOCH
Richfield, Wisconsin

EDITOR'S NOTE: You can write Dynacomp at 1064 Gravel Road, Webster, NY 14580, or call (716) 671-6160.

HOOKED ON ADAM

OK, so it worked! I'm a proud owner of an ADAM computer. Because you and Coleco gave me four free issues of *FAMILY COMPUTING*, I'm hooked.

After getting my issues, I'm pretty sure I'll get a subscription. You have one of the best computing magazines around. A little of everything. In your August issue, I loved the *Hangman* and *Renegade Robot* programs. Please, more programs like these and less like *Ice Cream Cone*.

How about special sections for different computers (i.e. Apple, Atari, Commodore, TRS-80, TI, and of course, ADAM)? You could have the programs in each section and explain how they work and give programming hints.

JACK REEDY
Alto, Michigan

EDITOR'S NOTE: Thanks for the compliment and the suggestions. We're thinking about them.

THANKS FOR TELECOMPUTING

It was with much surprise and appreciation that I came across your

section on telecomputing in the August issue. I am a novice when it comes to modem use and had, until recently, been looking for a medium which covered this rapidly expanding field. Few magazines cover telecommunications with the detail and clarity of *FAMILY COMPUTING*.

Again, my thanks for your decision to cover this exciting facet of the home computer. If I may, I would like to call your readers' attention to one of our local boards, Wizardry, which can be reached at (713) 952-3210.

SEAN KUNEC
Houston, Texas

CORRECTIONS

In the October "Buyer's Guide to Printers," we incorrectly listed information on Smith-Corona's Fasttext-80. The \$259 printer has dot-matrix output. In addition, cassette ribbons can only be purchased in a dual pack for \$18.95. In the same Buyer's Guide, the Brother HR-15 was listed incorrectly as a dot-matrix printer; it is a daisywheel.

it even runs this kind of program.

Secondly, it's a first class TV.

Flick a switch and these same advanced electronics give you an outstanding TV, with a high-contrast picture and rich, true colors.

And you get all this for about the same price as an ordinary monitor. Another piece of ingenuity we thought you'd appreciate.

We bring good things to life.

BEHIND THE SCREENS

PEOPLE, NEWS, AND TRENDS

EDITED BY BILL CAMARDA

Reading, Writing, and . . . Zork?

Erving School students enjoy high-tech talk with Infocom game writers.

School's an adventure in Millers Falls, Massachusetts, where Micki Siegel and Mike Lipinski, fifth- and sixth-grade teachers at Erving Elementary School, use Infocom "interactive-fiction" games to teach reading, writing, and organizational skills.

In these games, a player takes the role of the main character, typing instructions—where to walk, what to pick up, etc. To solve them, you have to think logically, plan, and use ingenuity—plus, you have to use correct spelling and grammar.

"All the skills—mapping, directionality, reading for understanding—that the children would ordinarily learn by other methods can be done through the games," Lipinski said.

"You learn how to make your own decisions, how to do it on your own without the help of adults," said sixth-grader Cherie Willoughby. "You have to keep going back to places you've been and objects you've found, and asking yourself 'What's the purpose of that?' and then figuring out exactly how to use it."

When the Erving classes got stumped in figuring out one game, *Deadline*, they wrote to Infocom for hints. The company offered help, and also sent its first "junior adventure," *Seastalker*, which was still in the testing stage. "They sent evaluation forms for the kids to fill out—and the kids were very perceptive about what the game was lacking," said Siegel.

Infocom later invited the classes on a field trip to its Cambridge headquarters, where the students spent a day with the company's programmers.

—LINDA WILLIAMS

Paperless Profits

Here's one company whose profits aren't only on paper. Intelligent Systems Corp., a Norcross, Georgia, manufacturer of PC add-ons, now offers its annual report on disk.

The disk includes spreadsheets and color graphics detailing how well each division performed last year, and describing the company's products. It also comes with market-research information that's rarely included in annual reports.

Leland Strange, Intelligent Systems' president, believes the disk-based annual report may itself be replaced soon, as companies begin to send their annual reports and financial updates via modem.

Intelligent Systems' annual report runs on the IBM PC (256K) or Apple II series (48K).

Taxing Requirements

Planning to write off a new computer at tax time? The rules have changed.

If you're using the computer strictly for business, you can still take advantage of both investment credits and depreciation. But if you use your computer for other things, too, the IRS is getting stingier.

To get an investment credit on the purchase of a new computer, you'll now have to show you're using the computer more than half the time for job-related tasks. Personal-business applications, such as home budgeting and investment analysis, won't count anymore.

If you use the computer for business part of the time, you can take a "depreciation" deduction for some of the computer's cost. *But*, if your computer use isn't primarily job-related, you'll have to divide that deduction over 12 years, instead of five.

Starting in the 1985 tax year, the IRS may request a detailed log of computer use to back up your claim of a deduction.

The new tax law affects not only computers but cars, boats, and leased property as well. If you want

to see the new tax bill for yourself, the telecommunications network NewsNet is currently carrying the full text, with explanations. Call NewsNet at (800) 345-1301 for information. Needless to say, though, for expert advice you should ask your accountant.—ROXANE FARMANFARMAIAN

Apple Sends Felon to pfs: jail

Burglar Levi Anderson is now in prison, thanks to Howard County, Maryland, police and their Apple II plus.

Police knew there had been dozens of burglaries in and around a Columbia housing development. Using their computer and *pfs: file* database software, they discovered a pattern: The thief was working only between 4:30 p.m. and 10 p.m., and hitting homes with sliding doors. Knowing that, they were able to plan a stakeout that caught Anderson. He confessed to 48 burglaries, and is now serving a 25-year prison term.

Howard County police enter information on every break-in that's reported: point of entry, time of day, type of residence, and about 20 other categories. Then, whenever they suspect a pattern, they go to the computer.

In another case, *pfs: file* showed a pattern of burglaries early in the week, in apartments with ground-floor entrances. A police stakeout ended in an arrest; the alleged burglar is now awaiting trial.

—KATHRYN BONN

Introducing

"New Improved MasterType"TM

and the newest members of the MasterType Family.

America's #1 educational software program now has the elements of a traditional touch-typing course in addition to being the most entertaining way ever to learn to type. New Improved MasterType now includes a second diskette of finger positioning drills and games to increase your typing speed and accuracy.

You'll become an expert typist faster than ever as you master the keyboard. Then you'll be ready to try two new programs in the MasterType Family.

MasterType's Writing Wizard.TM The easiest, friendliest full-function word processing program you'll ever find. And Writing Wizard will help you write effectively too. Color highlighting for easy editing, dual windows, a handy database with mail merge capability and multiple typefaces make it easy for you and your children to express yourselves clearly and creatively.

MasterType's Figures & Formulas.TM The "computing encyclopedia" of weights and measures for kids and adults. From centimeters to light years, you can calculate, convert and compare. Figures & Formulas will even

allow you to create customized quizzes for your kids.

The MasterType Family of programs makes learning more fun and easier than ever for both you and your children. Look for these programs at your dealer's now.

Availability:

New Improved MasterType:	Apple IIe/IIc, [®] IBM-PC/XT/PCjr, [®] Atari, [®] Commodore 64. [®] All with 2 disks, only 1 disk drive necessary. Macintosh disk. Atari and Commodore cartridges.

HOME-SCHOOL CONNECTION

LEARNING ABOUT WHAT THE KIDS ARE LEARNING CAI, Computer Literacy, Drill-and-Practice . . . What Do all Those Terms Mean, Anyhow?

BY KAREL HOLLOWAY

My 9-year-old son, Benjamin, came home from school excited. The next day his class was going to begin using the computer in the fourth-grade classroom across the hall.

By the time he came home the following day, his excitement was gone.

"All we do is put in a tape and do some math problems for about 10 minutes, and then go back to our classroom," he said in a disappointed tone. Benjamin wanted to learn programming.

I'd thought that programming started in the fourth grade, but, just to make sure, I called school to ask.

"We start to use the computers in grade K, with CAI. It's mostly drill-and-practice. Computer literacy doesn't start until middle school," the teacher told me.

What? CAI? Drill-and-practice? Computer literacy? Exactly what do these terms mean? And what are kids using the computer for? I wondered.

TYPES OF USES

As I was soon to find out, terms like computer-assisted instruction (CAI) and computer literacy are in common use. To further complicate things, not all schools use the terms alike. However, there are three basic categories of computer-related instruction that are easy to understand. All computer learning can be broken down as follows:

1. Teaching *with* the computer
2. Teaching *about* the computer
3. Programming

KAREL HOLLOWAY, of Dallas, Texas, is a reporter for The Dallas Morning News. She wrote about Houston's "Computers Can" program in the January FAMILY COMPUTING.

All terms I've heard thrown around fit into one of these broad categories.

TEACHING WITH THE COMPUTER

CAI is the most common form of teaching with computers today. When the term is used, it often refers to the electronic version of the math, spelling, or reading drills you did with pencil and paper as a child. Usually, a student will be given a disk or cassette tape to load into the computer and then will sit and do math problems, spell words, or complete sentences. Variations include arcadelike games with pictures and sounds that test a student's ability to come up with the correct answer before being shot down or devoured.

"When you talk about [computerizing] old-fashioned drill-and-practice . . . many people are against it because the computer is capable of so much more innovative drills," said Marjorie Ragosta, a senior, research scientist with the Educational Testing Service (ETS) in Princeton, New Jersey. "But that sort of thing works. Not only does it work, the kids don't really mind it."

Ragosta did a four-year study for ETS, the company that conducts many college entrance exams including the SAT, and found that stu-

dents in grades 1-6 who used drill-and-practice programs for 10 to 20 minutes a day improved their skills in math. In language arts and reading, the ETS study found smaller but consistently positive gains.

Even if the computer drills in your child's school aren't the best available, they still give students individualized instruction that a teacher rarely has time to offer.

She said that students using the computer drill programs could do up to 100 math problems in a 10-minute session. "When you do it with pencil and paper, you don't get anything like that," Ragosta added.

The Mission Independent School District in Texas, near the Mexican border, has used CAI only for the past six years. Students spend 10 to 20 minutes a day with drill-and-practice programs, Lupe Gonzalez, director of the district's computer center reported, and have shown remarkable improvement in standardized test scores.

These programs are not just drill-and-practice. Highly specialized to first determine the child's level and then provide problems on that level, they immediately feed information to the student and teacher on how the child is doing. Subsequently, they move up levels of instruction as the

The Evelyn Wood Dynamic Reader.™
Now, the world's most renowned master brings the techniques of Dynamic Reading to your computer.

Learning to read faster isn't good enough. With the *Evelyn Wood Dynamic Reader*, you'll learn to read three to ten times faster—but with better comprehension and retention.

Only Timeworks brings this highly successful reading program into your computer. It will guide you like a gifted teacher through the drills and exercises at your own comfortable pace, automatically record your progress, and let you graphically review your results

on colorful bar charts. Reading Dynamics is not a skimming or "key word" association technique. It is a totally different reading concept that registers every word, every idea, every shade

If it takes you more than 30 seconds to read this ad, you need Evelyn Wood.

of meaning in the written material. You will use more of your mental capacity and learn to concentrate. Your mind won't wander while you read.

Reading *dynamically* is more enjoyable than reading the old way. Complete thought patterns and ideas emerge from the written material in a smoothly moving picture. Instead of perceiving individual bits and pieces of information and putting them together as best you can, you will see total concepts. Reading *dynamically* is like living in the material.

The *Evelyn Wood Dynamic Reader* provides you with the exercises and tools you need to help you increase your reading comprehension and speed. Your own personal computer helps you develop your skills at your own pace.

You learn the essential techniques of Dynamic Reading in your own home—at any time convenient for you. You can repeat exercises as often as you wish to assure that you maintain optimal reading efficiency. Each program contains 50 Skill-Builder exercises, 20 reading exercises and 40 quizzes.

Only Timeworks offers the *Evelyn Wood Dynamic Reader*. Now at your favorite dealer. Or contact Timeworks, Inc., 405 Lake Cook Road, Deerfield, IL 60015. Phone: 312-948-9200.

Available for Commodore 64*, IBM*, Apple*, Atari*

Timeworks Programs:

Computer program da Vinci, Shakespeare AI Capp would ha

Programs for kids that are, Dickens and we loved.

If they were starting out today, this is what they could start with. Pixelwerks.

THE OTHER WAY TO DRAW AND WRITE

Instead of a brush and canvas, a pen and paper, they'd create on a computer. Because Pixelwerks is the first medium that can keep up with their imaginations.

MR. PIXEL'S PROGRAMMING PAINT SET

With Mr. Pixel's Programming Paint Set, da Vinci (or any 8-year old) could do more than paint a picture. He could also enlarge it, repeat it, move it around, and change colors. Instantly.

And at the same time, he would be developing his programming skills. Painlessly.

SHOW DIRECTOR

On the other hand, Shakespeare would love to play around with Show Director.

He'd use it to create plots and think up one scene after another, and he'd get a big cast of characters, lots of backgrounds, props, and musical sound effects to act them out.

BANK STREET STORYBOOK

Dickens wouldn't be able to keep his hands off Bank Street StoryBook by George Brackett.

Not only could he write his own story, but he could also illustrate the scenes and characters he sees in his mind.

MR. PIXEL'S CARTOON KIT

Maybe Al Capp wouldn't be satisfied with cartoons that just sit on the page after he tried Mr. Pixel's Cartoon Kit. Because he could make his cartoons come to life by animating them. His characters could move around, and even react to each other.

Every kid has a touch of creative genius buried inside. The job of Pixelwerks is to bring it out, with more features, more options and more flexibility than other programs.

In short, we supply the tools. Kids supply the imagination.

 **PIXELWERKS**

HOME-SCHOOL CONNECTION

student progresses. They are defined as "tutorials" or diagnostic/prescriptive programs.

TEACHING ABOUT COMPUTERS

Because of the success Gonzalez's district has had with CAI, it has not been too interested in using the computer in other ways. Nevertheless, beginning in 1985, the district—like all other public school districts throughout Texas—must introduce a computer literacy course to middle school students as part of the state-required curriculum. The course is to cover computer terminology, history of the computer as a tool, communicating instructions to the computer, and issues and impacts of computer use.

The state decided to require a computer literacy program to ensure that all students had a chance to really use a computer for at least one period every day for one semester, said Sandy Pratscher, director of instructional computing for the Texas Education Agency.

Even though the agency requires computer literacy, it also encourages computer-assisted instruction.

"But to be really useful, and not just [substitute for] electronic flashcards," Pratscher said, "CAI must include high quality, appropriate software, teacher follow-up on the computer lessons, and enough time on the machines to be able to progress. Too often CAI programs don't have diddysquat to do with the lesson being taught," she noted.

PROGRAMMING

The computer literacy course in Texas must also include programming—the key to understanding the term computer literacy. Some school districts use computer literacy to mean only programming instruction. Other districts teach computer literacy by teaching computer terms and uses from a textbook. Still others, like the Texas program, combine both in a single class during a single term. "We think it is important to include programming in this course, not for vocational reasons, but for educational reasons," Pratscher said. "It puts students in the driver's seat."

Paul Kimmelman, assistant superintendent for the Norton City Schools in Ohio, said his district will be concentrating on programming and CAI in computer literacy courses for the same reason it has

music and phys. ed. classes.

"We feel we will discover students who are interested in programming when we offer it at a lower grade level," he said. "We are required to offer English; we are required to offer math; we should be required to offer computer programming. We may discover students particularly good at computer programming who are not good at English or math."

THE KEY TO SUCCESS

All the educators stressed that the key to all good computer-related instruction is planning. Whatever its name, a program cannot benefit the student unless clear objectives have been determined and the courses designed to meet those objectives. "The teacher or administrator should take the time to work out a plan," Kimmelman said.

It's not always easy to find out exactly what your children are doing with computers at school. Teachers and administrators, themselves often still unfamiliar with the terms involved, may have difficulty explaining how the computer is being used and what educational goals they are trying to meet.

Here are some questions you can ask to help get the answers you need:

1. How often does my child get to use the computer?

Generally, once or twice a week is not really enough to give measurable results in either drill-and-practice or computer programming. For maximum learning and reinforcement, students should be using the computer at least three times a week.

2. How long does my child spend at the computer?

The ETS study mentioned earlier showed that students could exhibit progress in math, reading, and language arts when spending as little as 10 minutes a day working with an individualized computer study program.

3. Are computer programs used just to drill my child on facts learned in the regular classroom?

One of the major complaints about educational software is that it does not support what is being taught in the regular curriculum. Ask how the programs used match up with other classes in the curriculum.

4. What do you mean by computer literacy?

This is a key question. Computer literacy can mean that students are taught about computer use, but get

little, if any, hands-on experience. Or, it can mean that only computer programming—with no lessons on how computers work or on actual computer applications—is being taught.

Some educators (and parents) believe that all children must know how to program. Others believe that learning to use applications, such as word processing, should be the instructional emphasis. Still others see classroom lessons on computer use as sufficient. Make sure you know what your school district means when the administrators talk about computer literacy.

5. Why was this instruction method selected?

Educators should be able to give you well-thought-out reasons for their selection of instructional programs.

6. How will my child benefit?

In some cases, computers are being used simply because parents or companies have donated them to the schools. Administrators may not have thought about the benefits or goals of computer use. Make sure you (and your child's teacher) know exactly what the computer program is expected to achieve.

The answers to these questions should help you get a better understanding of what your district wants to accomplish with the computer in the classroom.

The closest thing to a standard definition of computer literacy may be that which the Education Technology Center's Advisory Panel came up with last year: "Computer literacy may be defined as whatever a person needs to know and do with computers in order to function competently in our information-based society. Computer literacy includes three kinds of competence: skills, knowledge, and understanding. That means: 1) the ability to use and instruct computers to aid in learning, solving problems, and managing information; 2) knowledge of function, applications, capabilities, limitations, and social implications of computers and related technology; and 3) the understanding needed to learn and evaluate new applications and social issues as they arise." The Advisory Panel admits that computer literacy may still mean different things to different people, but states that one thing it does *not* mean is the specialized knowledge required for a career in computer programming or computer science. ☐

GAMES

STALKING THE PERFECT HOLIDAY GIFT

BY JAMES DELSON

If you're looking to fill a stocking, give a gift, or make the holiday season more enjoyable, here's a list of outstanding games to suit a variety of tastes.

Remember, don't judge a game by its splashy packaging or provocative title. Try to determine the game-player's preferences. Or buy according to personality, using the guide provided below.

Titles appear with manufacturers and hardware availability.

ARCADE GAMES

Arcade games require little or no learning time. And they are easily enjoyed in 15- or 30-minute play sessions.

Ideal for:

- Large groups of game-players.
- People who put in long hours at the computer for serious applications and who want a quick action breather from intense concentration.
- Kids and adults who grow impatient with demanding puzzle-solving exercises. I'd recommend:

Boulder Dash from First Star/MicroFun, for Apple, Atari, Commodore 64, IBM PC
Buck Rogers from Coleco, for ADAM
Donkey Kong from Atarisoft, for ADAM (available from Coleco), Apple, Atari, Commodore 64, TI
Jumpman from Epyx, for Apple, Atari, Commodore 64, IBM PC

Tutankham from Parker Brothers, for ADAM, Atari, VIC-20
Parsec from TI/Triton Products, for TI

STRATEGY/ARCADE GAMES

Although they challenge your hand/eye coordination, success in these contests often demands that you plan out moves in advance, deduce the opponent's strengths and weaknesses, and learn from a careful analysis of your mistakes. Ideal for:

- Game-players willing to spend more time at the computer, perfecting their skills.

I'd recommend:

Archon II: ADEPT from Electronic Arts,

YOUR GAME-PLAYING AND BUYING HABITS

FAMILY COMPUTING's first Games Survey elicited a tremendous response. It's helped answer a number of questions we had concerning our readers' game-playing habits. Here are some of the most interesting facts and figures we obtained.

According to the respondents, Commodore 64 was the most popular computer brand used for game-playing, followed by TI/99-4A, Apple, and Atari.

People seem to play in moderation. Sixty-three percent of the responding families play fewer than 10 hours a week (see chart) with 24 percent playing 10-20 hours weekly, and only 5 percent playing over 30 hours a week.

Not many families impose restrictions on the amount of game-playing in the house—only 18 percent of the respondents. Thirty-three percent have some sort of rules regarding game-playing, however. Chores and homework must be completed before embarking on gaming sessions in many a home.

As you'd expect, TV-viewing has suffered most at the hands of computer game-playing. Seventy-nine percent spend less time watching the tube (see chart). Forty-nine percent play fewer board games, 23 percent read fewer books, 19 percent spend less time at the movies, and 10 percent participate less in sports. But that's not all. Some reported less eating, sleeping, sewing, and even taking care of fish since members started playing computer games.

GAMES—A FAMILY AFFAIR

Every member of the family played games in 63 percent of the responses. For the most part (54 percent), families play together, although solo-play is important, too (see chart).

As for how and what you buy, the average respondent owned 16 computer games and bought one the month prior to filling out the survey. The price paid is, for the most part, \$25-\$35, although almost a quarter of the respondents spend more than \$35. And deciding on what to buy usually involves both parents and kids. Nine percent said that kids weren't involved at all; only 3 percent said parents weren't involved at all. Buying, of course, is a different matter: 64 percent said parents paid for the games, while kids foot the bill in 18 percent of the households that responded.

When asked to name their favorite computer game, readers gave *Parsec* (TI/Triton Products), *Wizardry* (Sir-tech), *Donkey Kong* (Atarisoft), *Lode Runner* (Broderbund), *Archon* (Electronic Arts), *Flight Simulator* (subLogic), and *Beach-Head* (Access Software) the most votes.

As for designers, only 10 percent of the respondents listed a favorite. Scott Adams (*Adventure*), Bill Budge (*Pinball Construction Set*), Marc Blank (*Zork*), and David Crane (*Pitfall*) rated highest.

Favorite game-making companies proved easier to identify. Forty-seven percent voted in that category. Infocom,

Atari/Atarisoft, Epyx, Texas Instruments, Electronic Arts, Broderbund, Strategic Simulations, Commodore, Sierra Inc., Activision, Radio Shack, and Coleco garnered the most votes, in that order.

Arcade games led the field as the most popular form of computer entertainment, with 91 percent of the respondents reporting at least one family member hooked on them. Strategy/arcade games are a popular genre as well, with 65 percent saying at least one family member liked games, such as Electronic Arts' *Archon*. Role-playing adventures like the *Ultima* series, and text/graphics adventures like Infocom's *Zork* series or Sierra's classics are equally popular.

Readers suggested a variety of ways we might improve our games coverage. A large number of respondents requested more reviews of games involving strategy and tactics. They split when it came to requesting either more or less arcade game coverage. Of course, an enormous number of readers, particularly TI owners, asked for more reviews of games for their machine. I've encountered few noteworthy new games for this computer—the reason for the scarcity of TI reviews.

Thanks one and all for your responses. We've selected and notified the winners of the Games Giveaway. We wish them and all readers happy gaming in the coming year. Stay with us as we bring you more of the most exciting entertainment programs for your computer.

GAMES

for Atari, Commodore 64
Beach Head from Access, for Atari, Commodore 64
Beyond Castle Wolfenstein from Muse, for Apple, Commodore 64
Castle Wolfenstein from Muse, for Apple, Atari, Commodore 64, IBM PC
Combat Leader from Strategic Simulations, for Atari, Commodore 64
Mig Alley Ace from MicroProse, for Atari, Commodore 64
Operation Whirlwind from Broderbund, for Atari, Commodore 64
Raid on Bungeling Bay from Broderbund, for Atari, Commodore 64
Skyfox from Electronic Arts, for Apple
Star Raiders from Atari, for Atari
Submarine Commander from Thorn EMI, for Atari, Commodore 64

STRATEGY AND TACTICS

Learn firsthand how battles were waged and won or lost with this genre which simulates all manner of warfare. These difficult games require advanced planning, coordination of a number of different details, and may take several hours or days to complete.

Ideal for:

- World history buffs.
- Players who like long and serious competition.
- Solo or group play.

I'd recommend:

Battle for Normandy from Strategic Sim-

ulations, for Apple, Atari, Commodore 64, IBM PC
Fortress of the Witch King from Avalon Hill, for Apple, Commodore 64
Gulf Strike from Strategic Simulations, for Atari
Legionnaire from Avalon Hill, for Apple, Atari, Commodore 64
Lordlings of Yore from Softlore, for Apple
Parthian Kings from Avalon Hill, for Apple, Commodore 64
Tigers in the Snow from Strategic Simulations, for Apple, Atari, Commodore 64, IBM PC/PCjr

TEXT AND TEXT/GRAPHIC ADVENTURES

These games make you the hero of a novel—as the plot unfolds you encounter more obstacles to the completion of your quest. First-rate problem-solving skills are a prerequisite here, though it's often fun for the whole family to get involved.

- Ideal for:
- Puzzle and braintwister fans.
 - People who like to use their wits.

I'd recommend:

Enchanter (all text) from Infocom, for Apple, Atari, Commodore 64, IBM PC/PCjr, TI, TRS-80

The Mask of the Sun from Broderbund, for Apple, Atari, Commodore 64
Pirate Adventure (graphics) from TI/Triton, for TI
Suspended (all text) from Infocom, for

Apple, Atari, Commodore 64, IBM PC/PCjr, TI, TRS-80
Ulysses and the Golden Fleece from Sierra Inc., for Apple, Atari, Commodore 64, IBM PC/PCjr

ARCADE/ROLE-PLAYING ADVENTURES

These games feature moving pictures and more interaction with the computer. Ideal for:

- Arcade gamers with adventurous urges.
- Adventure gamers with arcade itches.

I'd recommend:

Aztec from Datamost, for Apple, Atari, Commodore 64
King's Quest from Sierra Inc., for IBM PC
Murder on the Zinderneuf from Electronic Arts, for Apple, Atari, Commodore 64, IBM PC

FINANCIAL

Manipulate money, develop strategies to beat the system, and/or your competitors in a race for the most—whether you're dealing in stocks and bonds, real estate, or synthetic bananas. These challenges require a lot of time, planning, and thought.

Ideal for:

- Junior financiers and executives.
- Students learning the ins and outs of economic wheeling and dealing.

I'd recommend:

CUSTOM-DESIGNED BINDERS AND SLIPCASSES PROTECT YOUR

FAMILY COMPUTING™

SAVE YOUR COPIES OF FAMILY COMPUTING FOR EASY REFERENCE.

Collect and preserve an entire year of FAMILY COMPUTING in these handsome, durable Library Binders and Slipcases.

Each Library Binder holds 12 issues in individual snap-in rods. Open-back Slipcases store issues for individual reference. Both Binders and Slipcases include gold transfer foil so you can personalize them with dates and volume numbers.

Bound in forest green simulated leather, and embossed with the gold FAMILY COMPUTING logo in its spine, these handy space-savers protect your magazines for years to come.

Library Binders are just \$7.50 each; order 3 for \$21.75 or 6 for \$42., and save. Library Slipcases available at the low price of \$5.95 each, 3 for \$17. or 6 for \$30. COMPUTING CLINIC

INCOMPATIBLE DISKS • TI DISK FILES • ON-LINE LOCKUPS
GARDEN PROGRAMS • CARTRIDGES FOR THE COCO • VIC-20 SOFTWARE •

BY JEFFREY BAIRSTOW

Are any two disk drives compatible? Disks from my daughter's Commodore 64 will not work in the drives on my Franklin 1000. Why is this so?

ROSCOE MURRAY

Carson City, Nevada

Unfortunately, the recording formats for disks differ from manufacturer to manufacturer, so disks used in one maker's computer cannot generally be used in a model from another supplier. This is true for Franklin and Commodore, for example.

Some computers that use the CP/M operating system can read

JEFFREY BAIRSTOW, a technical journalist who lives in West Redding, Connecticut, was a founder and managing editor of Computer Decisions magazine. He has also taught math and computer science in England. His family, including two preschoolers, uses a variety of computers.

disks from other CP/M computers; many of the IBM PC-compatible systems can also interchange disks. In addition, there are programs available to convert disk formats from CP/M to IBM PC-DOS or MS-DOS, but none, as far as I am aware, to convert from Commodore to Apple (Franklin) formats, or vice versa.

How do I set up files on my TI-99/4A with a disk drive? When I called TI, I was told to look it up in the manual.

JASON DELOZIER

Bedford, Texas

Setting up disk files in BASIC is a relatively complex operation. Unfortunately, space does not permit me to give you complete instructions here. However, TI is correct—the information is in your manuals.

I suggest that you begin by reading the section in your TI-99/4A User's Reference Guide on "File Pro-

cessing." Work through the examples, substituting DSK1.FILENAME for CS1 in the programs. Then read the section of your *Disk Memory System* manual that explains the use of the "Disk Manager Command Module" that came with your disk drive.

I have a Commodore 64 with an Automodem 1650. Once in a while, when I am talking to another computer, the keys lock up so I can't communicate although the other computer can. Is this the fault of the modem or the computer?

JONATHAN TOFEL

Bennington, Vermont

When there's a problem with telecommunications, the phone line is always a prime suspect. Most telephone lines were designed for voice messages, not data, and the least bit of "dirt" or "noise" throws a monkey-wrench. If the telephone tones are

Get even more involved in the adventures—by winning a computer of your own!

You already know about the BYTES BROTHERS mysteries—the exciting series of stories you solve yourself with the help of a home computer. Imagine how much fun it would be if that computer were yours! Here's your chance. Look for a BYTES BROTHERS book display and pick up your Entry Form—or put your name and address on a plain piece of paper.

THE BYTES BROTHERS

COMPUTER GIVEAWAY CONTEST

Prizes will be awarded to the first three coupons drawn at random. No purchase necessary to win. All entries must be postmarked no later than February 15, 1985. Chances of winning depend upon number of entrants. Send all entries to:

BANTAM BOOKS BYTES BROTHERS COMPUTER GIVEAWAY CONTEST

Dept. LP-FC, 666 Fifth Avenue, New York, NY 10103

You could win:

GRAND PRIZE:

One Commodore 64™ Computer with: disk drive, printer, 13" color monitor and modem (retail value over \$1000)

SECOND PRIZE:

One Commodore 64™ Computer with: disk drive and modem (retail value over \$500)

THIRD PRIZE:

One Commodore 64™ Computer and modem (retail value over \$250)

9 TO 5 TYPING.TM BECAUSE NOT ALL TYPING GAMES HAVE TO BE SHOOTING DOWN SPACESHIPS.

Why do typing programs have to involve shooting down spaceships? They don't!

9 TO 5 TYPING lets students and adults learn

to type using an effective method developed by college educators. We've taken the ten basic steps to learning typing and combined them with the fun of sequences from the movie, *9 TO 5**. What could be better than learning the key locations while helping Doralee lasso Hart. Or

increasing your speed while taking pot shots at Hart in a shooting gallery. All the fun of the movie combined with an innovative new approach to learning touch typing.

9 TO 5 TYPING. The typing game for everyone... Spaceships not included.

COMPUTING CLINIC

distorted or disturbed by noise from other telephone circuits, garbage characters can be generated that may appear as errors on your screen.

But your problem seems to stem from other causes. If you have this problem with one particular information service, or individual computer, then check to make sure your settings match.

If your keys "lock up" even when you aren't connected to another computer, then the fault is probably the computer's. Commodore 64s have been known to break down.

Finally, it's possible that you are operating in full-duplex, and the other computer is not "echoing" characters back to you. If this is the case, your keys haven't locked up; you just can't see what you're typing. Try switching to half-duplex.

What companies besides Radio Shack make game cartridges for the TRS-80 Color Computer?

SHIRLEY A. PRETTYMAN
Laurel, Delaware

Radio Shack is the only company that makes cartridges for the Color Computer. However, a number of in-

dependent software manufacturers market software in cassette format for the CoCo. Check at a Radio Shack Computer Center for the *Directory of Reviewed Software*. This thick, three-ring binder, published by Radio Shack, lists third-party software for all Tandy/Radio Shack computers, describes the type, and gives each listing a rating (one to five stars).

Is the Commodore VIC-20 out of production? If so, and if no new software is available, is there any conversion (or emulator) available that allows the VIC-20 to operate Commodore 64 software?

RICHARD E. PITMAN
Marion, Arkansas

The VIC-20 is, by all indications, no longer in production, and software for it from Commodore is increasingly hard to find. However, since many VIC-20s are still in use, independent software makers continue to offer programs for that machine. You may have some success in obtaining VIC-20 software by mail order from one of the companies ad-

vertising in the classified columns of this magazine.

Unfortunately, there's no way to upgrade a VIC-20 to run Commodore 64 software.

Do you know of a good gardening program for the Apple IIe?

ROGER D. THOMAS SR.
Marion, Illinois

There are a number of gardening programs for the Apple IIe and other computers. I suggest you investigate *The Gardener's Assistant*, available for the Apple II plus/IIe/IIc (\$39.95), IBM PC/PCjr (\$45), and the Commodore 64 (\$29.95), from Shannon Software, Box 6126, Falls Church, VA 22046; (703) 573-9274.

This program will allow you to produce graphic displays of suggested garden layouts, and recommends planting quantities and dates for more than 50 vegetables. ☐

ATTENTION TI OWNERS!

In the September Clinic, we omitted mention of a major supplier of TI-99/4A products: UNISOURCE, P.O. Box 64240, Lubbock, TX 79464; (800) 858-4580, in Texas (806) 745-8834.

Wizard of ease.

Easy user.

Letter Wizard is an ideal word processing program for even the most serious wordsmith in your family. It boasts a spelling checker and compatibility with all popular printers. Nice thing is, commands are a whiz to learn and perform.

Easy writer.

Compose and edit right on the screen. At the stroke of a key, you can move, delete, insert, search and replace words and paragraphs like... well, magic.

Easy speller.

Letter Wizard includes a spelling checker which allows easy in-line corrections of over 33,000 words. And you can even create custom dictionaries of your own special words. Have we got you under our spell yet?

Easy buyer.

OK, a powerful program like this must cost a powerful lot of money, right? Stuff and nonsense. Even though Letter Wizard offers more than most, it costs less than most. And that's no voodoo.

For Commodore 64, Apple II and Atari systems.

TELECOMPUTING

BANKING ON THE FUTURE

A Traditional Industry Turns High-Tech

BY JUNE ROGOZNICA

You're leaving tomorrow at 6 a.m. for a long-awaited, two-week vacation in the Bahamas. You just remembered you haven't made the monthly mortgage payment that's due Tuesday. You don't have enough in your checking account to cover it. You glance at your watch. It's 3:32:09 p.m. Your bank just closed. Big problem. The automated-teller machine at your bank doesn't allow fund transfers. You ponder the alternatives:

1. Try to arrange a later flight even though you'll lose your "super-saver" fare.
2. Take a chance. Send the check and hope they don't cash it until your return.
3. Don't send the check and hope your loan officer won't miss it.
4. Take your planned flight. Don't worry about losing your house. You always liked apartment life anyway.

None of these alternatives is ideal. They may work. Then again, they may not. The problem is, these may be your only alternatives—or at least they were, until the emergence of home banking.

Gone is the time when banks lured customers with toasters, clock/radios, and televisions—premiums offered to depositors. Today, banks are turning away from toasters and toward high technology. Their reasons: to keep old customers, woo new ones, and reduce the cost of a labor- and paper-intensive industry.

JUNE ROGOZNICA is the managing editor of FAMILY COMPUTING.

Whether their tryst with technology will be successful is uncertain. What's even more important to thousands of Americans is whether the concept of home banking is sound, and the service useful. Here we'll attempt to answer some of the questions most frequently asked.

WHAT IS HOME BANKING?

Home banking is a relatively new service offered by some banks, thrifts, and holding companies. It allows an individual to conduct normal banking transactions such as fund transfers and up-to-date check balancing at home during nonregular banking hours. With nearly all

home-banking institutions you can pay your bills on-line. For example, with electronic funds transfer, money is moved directly out of your checking account into the vendor's (payee's) account. There are, however, certain important transactions that you cannot do, such as make deposits and withdrawals.

HOW TO GET STARTED

First, you must open or have an account at a financial institution that provides home banking. You will need a computer or terminal, a modem, and communications software. There are a variety of home-banking systems, and each system

LAST NIGHT WE EXCHANGED LETTERS WITH MOM, THEN HAD A PARTY FOR ELEVEN PEOPLE IN NINE DIFFERENT STATES AND ONLY HAD TO WASH ONE GLASS...

That's CompuServe, The Personal Communications Network For Every Computer Owner

And it doesn't matter what kind of computer you own. You'll use CompuServe's Electronic Mail system (we call it Email™) to compose, edit and send letters to friends or business associates. The system delivers any number of messages to other users anywhere in North America.

CompuServe's multi-channel CB simulator brings distant friends together and gets new friendships started. You can even use a scrambler if you have a secret you don't want to share. Special interest groups meet regularly to trade information on hardware, software and hobbies from photography to cooking and you can sell, swap and post personal notices on the bulletin board.

There's all this and much more on the CompuServe Information Service. All you need is a computer, a modem,

and CompuServe. CompuServe connects with almost any type or brand of personal computer or terminal and many communicating word processors. To buy a Starter Kit, see your nearest computer dealer. To receive our informative brochure or to order direct, call or write:

AVANT-GARDE

TELECOMPUTING

is compatible with different computers. For example, Pronto, offered by Chemical Bank of New York and in the planning stage at quite a few other banks, is compatible with Atari, Apple, Commodore, Compaq, and IBM computers. Penn Security Bank & Trust Co. of Scranton, Pennsylvania, serves the same computers as well as ADAM, Apple's Macintosh, TRS-80, and several others.

In general, basic monthly fees range from \$7.50 to \$15 plus the cost of local telephone calls. At least one bank, however, charges 10 cents a minute or \$6 per hour. (This assumes, of course, that you already have the hardware and communications software necessary to go on-line.)

THE ADVANTAGES

The primary benefit of a bank-at-home service is the convenience. It allows a customer to perform banking transactions on a more flexible schedule. In general, home-banking services are available between 6 a.m. and midnight.

For Vincent Brennan of Ridge-wood, New Jersey, home banking's greatest asset is the ability it gives you to manage cash in your accounts on a daily basis. Brennan, a principal for Peat, Marwick, Mitchell & Co., a public accounting and consulting firm, was part of a pilot program conducted by AT&T and CBS. "I could make deposits into an interest-bearing account, stagger my bill payments, and make more interest on my available funds," Brennan explained.

However, if you're dealing with small sums of money, like \$300 in a savings account, the benefits will be barely noticeable. "If you're talking about \$30,000 in a money-market account, it can make a big difference," Brennan said.

Brennan noted that in the past he shopped for high interest rates, interest-bearing checking accounts, low service charges, and high returns on certificates of deposit. "Whether I had to drive two miles or five miles, it was worth it for me. But, I would be willing to accept the

lower interest rates on the deposit for the total convenience and flexibility of home banking." Though the pilot program has ended, Brennan plans to get home banking when it's offered at a financial institution in his area.

But, you don't have to sacrifice a higher interest rate to get home banking. In fact, Penn Security Bank & Trust Co. gives higher rates (2 points higher) on certificates of deposit to customers who obtain them through its home-banking service. The reason: to stimulate activity in the home-banking area, according to Audrey F. Markowski, an assistant vice president at Penn Security.

The bank, the only one in Pennsylvania to offer bank-at-home services, also has a two-month free-trial period. Additionally, after customers sign up for it, they are given two hours of free service each month. There are other enticements as well. Chemical Bank allows new Pronto users to purchase an Atari 300-baud modem for \$75, \$65 below the regular cost.

The time saved is probably the most obvious benefit of home banking. "If it typically took you two hours to pay bills on a bimonthly basis, you could probably do it in a half hour [with home banking]."

Brennan said. Jon Patrick Harper of Sunnymead, California, saves "the commute time and fuel costs associated with trips to the banks" by using Bank of America's HomeBanking Los Angeles.

THE DISADVANTAGES

Home banking is not quite the panacea it might appear to be at a glance. There are problems—flaws inherent in the system of telecomputing—particularly physical limita-

TELECOMPUTING

tions. "Home banking doesn't alleviate the problem of going to the bank and making deposits—or getting cash," Brennan explained. As a result, using home banking doesn't totally eliminate his trips to the bank.

With home banking in its infancy, there are additional bugs to be worked out. There are occasional time lags since most of the information passes through the bank's mainframe computer.

There's the question of system security. Is there a way other users can access another person's account and transfer funds? In general, bank officials say that fear is unfounded. But, others insist there is room for improvement. One home-banking user involved in a voice-based network (his terminal was hooked up to a TV set and telephone-based terminal) overheard another user speaking in his home. "Now, had he verbalized his access number and account number, I might have been able to access his account. And, I have no idea if my voice was ever overheard."

The user suggested incorporating "device integrity" into the system as a way to guard against "break-ins." Device integrity requires that transactions be made from an authorized and validated terminal, usually in the user's home. That way, someone else could not access your account unless they logged on from the designated terminal or computer.

WHO USES IT?

There are about 26,000 American households that now bank at home through terminals or microcomputers, according to a study conducted by *American Banker*, a newspaper that covers the banking industry. That number is expected to grow substantially as the quantity of personal computers and modems in the home increases. Communications Studies and Planning International Inc., a New York-based consulting firm, predicts that there will be 9 million personal computers in homes by the end of this year. And, 10 percent—or nearly 1 million—of those computers will be equipped with modems.

But those in the banking industry admit that converting computer users into home-banking users is not an easy task. Says Mason Ellerbe, a management assistant with the American Bankers Association, "Getting people to use the system is gen-

HOW IT WORKS—ONE USER ON-LINE

One of my biggest banking problems has always been the bank's hours. When it's open, I'm working, and when I'm free, it's closed. Now, thanks to my computer, I usually do my banking—at home—at about 11 p.m. on Saturday, after my kids and I get back from the movies.

With home banking, I can take care of nearly all my month's banking during a single session at the computer. The process begins when I turn on my Apple II plus computer and load the *Smartcom I* telecommunications software for my Hayes Micromodem IIe.

Next I hook up my computer to the bank's by dialing a local or a toll-free number. When the bank's computer answers, I follow a simple log-on procedure, which is explained in the users' guide provided by my bank, Bank of America. Then, I provide my customer number and passcode. (I often think how much faster and more pleasant the log-on procedure is than standing in line at the bank.)

When the main menu appears, I have several transaction choices. I most often use the *PAY BILLS* option, which I access by entering the number next to it and pressing *RETURN*. When the menu appears, I indicate which of my accounts I want to use for making payments.

erally harder than getting the system set up."

THE FUTURE

"To a great extent, you can think of the personal computer in banking as being where the automatic-teller machines were 10 years ago," says Gary Arlen, president of Arlen Communications Inc., a consulting and research firm specializing in interactive services. "People didn't think they'd be using them, but now they're waiting in line to use them." Others, both inside and outside the industry, are optimistic that home banking will become more widespread. But, they are also realistic that it will take some time.

John Fisher, senior vice president of Banc One Corp., Columbus, Ohio, has a more visionary view of home banking. "There are generic services being provided now, but there will be more exotic, specialized services in the future." For example, "If you

I have two sets of bills to handle: those I pay electronically and those I continue to write manually. By using electronic funds transfer, there's no lead or float-time. The date I specify payment is to be made is the date I'm credited with the payment. This earns me maximum interest on my funds.

I return to the main menu by using shorthand commands, like *=EM* for *ELECTRONIC MAIL* and *=TF* for *TRANSFER FUNDS*. A few seconds later I move funds between appropriate accounts to cover the payments I've just scheduled.

Next, I pull up on my screen what will become my next month's statement. Here, I verify my deposits and the checks that have cleared. When my statement comes, I have a neat, concise statement instead of reams of canceled checks.

If I have a question or a problem, I use the service's electronic mail process which is handled by a bank clerk. It's similar to writing a short letter, except that it's all done on a computer screen. After I've sent my messages off, I return to the main menu to make sure there's nothing else I want to do. Seeing nothing, I type in *=LO*, shorthand for *LOG OFF*, and sign off for the night. Total elapsed time? Five minutes.

—JON PATRICK HARPER

want to buy a car and get a loan for it, you'll be able to access the current rate through your computer." And these services won't be confined to the home, says Fisher. They'll be available in offices and public access areas such as shopping centers. Who knows? The next step may be banking from a hotel in the Bahamas. ☐

ELECTRONIC EDITION

FAMILY COMPUTING has started an "electronic edition" on *CompuServe*. Here, you may read fast-breaking news and reviews, post messages for the editors and other users, attend live conferences, and generally participate in the creation of a new electronic magazine. Type *GO FAM* at any *CompuServe* prompt to check it out! You can also leave messages (*SourceMail*) for FAMILY COMPUTING on *The Source* (account No. T15483).

To operate these electronic services, FAMILY COMPUTING uses modems supplied by Hayes Microcomputer Products, Inc.

A black door is slightly ajar, revealing a vibrant, colorful, and abstract scene of light and smoke. The scene is dominated by bright orange and yellow light, with streaks of purple and blue. The overall effect is that of a portal or a window into a fantastical, high-energy environment. The door is set against a dark background, and the light from the opening creates a strong contrast.

IT'S HERE

COOL

INTRODUCING OKIMATE 10... THE FIRST

The printer in a class by itself.

It's here! The new OKIMATE 10 Personal Color Printer. The first color printer that lets you show off and tell all. The printer that lets you print all the information you can create with your Atari® or Commodore® computer. But with the remarkable ability to create original drawings and graphics as well, in over 26 beautiful colors.

A class act! The OKIMATE 10 gives you crisp, clean term papers, school reports and homework. Word processing capability means everything you do can be printed letter quality in minutes, instead of typed in hours. OKIMATE 10

color gives you the opportunity to print graphs, charts and pictures from popular graphics and drawing programs. OKIMATE 10's brilliant color means you'll shine, every time.

OKIMATE 10 feels right at home. Anywhere.

A special PLUG 'N PRINT™ package lets you plug your new OKIMATE 10 into your Atari or Commodore computer. And print. It's that easy. In minutes you'll be printing everything from soufflé recipes to needlepoint patterns. Party invitations to kitchen inventory. Love letters to gardening directions. At 240 remarkable words per minute. And not just in black and white, but in over 26 brilliant colors!

Financial statements will keep you tickled pink for very little green.

If you use your personal computer to keep track of mortgage payments, tuition payments, balance your checkbook or jump ahead of the Dow Jones', there's good news for you. You'll find that the new OKIMATE 10 gets down to business quickly. And easily.

A "Learn-to-Print" diskette and tape shows you how to set up your new personal color printer and start printing. A complete OKIMATE 10 Handbook will show you how you can take your imagination to places it's never been before.

WORLD

PERSONAL COLOR PRINTER UNDER \$250.

And while your imagination is soaring, you'll be glad to know that your new printer can keep right up with it! The new OKIMATE 10 is built with the same tradition of quality and manufacturing excellence that has made Okidata the most respected name in computer printers. Okidata craftsmen specially designed and engineered the new OKIMATE 10 to be incredibly small and lightweight. And they made it quiet as a whisper. But their imagination didn't

stop there. To help you and your personal computer keep within budget, they made the OKIMATE 10 available at retailers everywhere for less than \$250. Something that should make every personal budget tickled pink.

patible with a variety of software packages that will run on your Atari and Commodore with a simple disk drive. Just load and you're off and running. Plotting charts. Designing special graphs. Creating original illustrations and pictures. Drawing special graphics. And printing them all beautifully for everyone. On most kinds of paper. In over 26 beautiful colors!

Color your world.

If you've been playing games on your personal computer, now you can get serious and still have fun. The new OKIMATE 10 is completely com-

QUESTIONS & ANSWERS

Q: Why do I need a printer?

A: You might as well ask, "Why do I need crayons?" When it comes to communicating, "putting it on paper" is still the best way to get your message across. You can have lots of computer equipment, but without the OKIMATE 10, it doesn't mean very much. Unless you get your letter, report, term paper or party invitation off the screen and down on paper, nobody's going to see it.

Q: What makes the OKIMATE 10 better than any other printer?

A: Because the OKIMATE 10 is unlike any other printer. First, it prints in COLOR. Up to 26 beautiful colors. Second, it prints up to 240 words a minute, so quietly you can talk in a whisper right next to it and still hear every word! And third, it prints letter quality, every time.

Q: What about graphics and pictures?

A: The OKIMATE 10 does it all. Graphs, charts, symbols, pictures, illustrations, and special drawings! With a compatible drawing package, anything you create on your screen can be printed in full color; a disk drive is required for color screen printing.

Q: What kind of paper can I use?

A: Just about any kind of smooth paper you want. From continuous feed computer paper to single sheets. From mailing labels to plastic acetate for overhead transparencies, the OKIMATE 10 prints crisp, clean, colorful images you'll be proud to send to friends, teachers, business associates, or frame and hang right in your own living room!

Q: Is the OKIMATE 10 easy to use?

A: As easy as "PLUG 'N PRINT!" No other printer is easier to use than the OKIMATE 10. Connecting the printer to your Commodore or Atari computer is, literally, a snap. The exclusive PLUG 'N PRINT package snaps into the printer. One cable connects it directly to your computer or disk/tape drive. Turn it on and you're in business. Once your OKIMATE 10 is up and running, the "Learn-to-Print" software program (included) teaches you printer basics—the "Color Screen Print" disk (also included) automatically prints everything on the screen in a single stroke. As a matter of fact, most of your printing can be done with just one command.

Q: What's the printer like in operation?

A: In one word: easy! Incredibly easy! The ribbon comes in a "Clean Hands" cartridge. So it's as easy to change as the tape in your audio cassette player.

Q: What about reliability?

A: Okidata has built the reputation of its complete line of printers on quality, dependability and rugged construction. The OKIMATE 10 is no exception. Don't let its light weight and compact size fool you. This printer is not a toy. It's a workhorse.

Available at retailers everywhere.

MERRY COMPUTING TO ALL AND TO ALL A GREAT GIFT!

Make sure every computer user you know wakes up with a great gift in their holiday stocking. Give them **FAMILY COMPUTING**.

It's the ideal holiday gift for all your computing relatives, friends, next door neighbors, and even your car pool chums and buddies at the gym.

But no matter whom you give **FAMILY COMPUTING** to, they'll be Merrily Computing all year long. Because every fact-filled monthly issue brings them valuable programs that are educational, fun and practical. The best-rated hardware and software reviews. Plus expert tips and advice, information on what's new, and fascinating features that show them how to use their computers for everything from planning a family vacation to completing a tax form.

You couldn't choose a more unique and fitting gift. Or one as easy and convenient to give. But don't wait until the holiday rush to order. Or you'll find yourself giving mittens, ties, and other last-minute gifts that won't light up their holidays like a year of **FAMILY COMPUTING**.

A **TERRIFIC GIFT BARGAIN**. Your first one-year gift is just \$19.97 — 33% off the cover price. Each additional

gift is only \$13.97 — 53% off the cover price! And we'll send you festive seasonal greeting cards so you can announce your gifts in time for the holidays.

YOURS FREE...

FAMILY COMPUTING's book of 10 **STARTER PROGRAMS** with your paid gift order. Includes math, sports, home management programs, and more. Great for yourself or as an extra stocking stuffer!

Use reply card provided to order today. If card is missing, write to: P.O. Box 2513, Boulder, Colorado 80321.

LEARNING LOGO

SPARKLING UP YOUR ROUTINES

Learn How to Add Color to the Most Simple Procedures, Then Try Some New Shapes

BY MINDY PANTIEL AND
BECKY PETERSEN

This is the fourth article in a six-part series which takes a step-by-step approach to learning Logo. In the past months, families have learned how to write, edit, and debug their own Logo procedures using commands such as FD, BK, RT, LT, PU, PD, and REPEAT. As with any computing language, these commands may differ somewhat depending on what version of Logo your family is using. Use your Logo manual as a companion to this article to help you pinpoint the exact commands required in your version.

ISSUE TOPIC

September	Meeting the turtle: seven simple commands.
October	Logo learning aids: turtle shortcuts.
November	Teaching your turtle: debugging and saving.
December	Adding sparkle: programming Logo colors; trying new shapes.
January	Variations on a theme: changing sizes and shapes.
February	Advanced Logo: where to find out more.

Kids love color—coloring books, crayons, colored pencils, and markers. Commands that add a rainbow of colors to programs are built into the Logo language. The first thing we are going to talk about this month is how to add color to procedures. Then we will use some discovery-learning strategies to define more complex shapes than those we've explored before, including triangles, other polygons, and circles.

OVER THE RAINBOW

Adding color to procedures is one of the easiest aspects of Logo to master. For most types of Logo, it boils down to two commands: **PC (PEN-**

MINDY PANTIEL and BECKY PETERSEN of Niwot, Colorado, are contributing editors to FAMILY COMPUTING and authors of Kids, Teachers and Computers, published recently by Prentice-Hall.

COLOR), which lets you set the color the turtle uses to draw, and **BG (BACKGROUND COLOR)** which lets you set the color of the screen background. (Some versions of Logo use the commands **SETPC** and **SETBG** for these purposes, but the concepts are the same. This is a good example of an instance when it is important to refer to your Logo manual.) Of course you will need to be using either a color television or a color monitor as your video display in order to use the Logo color capabilities.

To change the drawing or background colors, you will type in a **PC** or **BG** command, followed by a color number which represents one of the colors available. Depending on your computer and the version of Logo you are using, the number of colors available to you at any one time can vary from three to 18. The six numbers listed here for the colors available with Krell and Terrapin Logo are common Apple color numbers:

- | | |
|---------|----------|
| 0 Black | 3 Violet |
| 1 White | 4 Orange |
| 2 Green | 5 Blue |

To change the background color to green, you would enter **BG 2**; to change the pencolor to orange the command **PC 4** would be used. Color commands can be used in either the

DIRECT MODE or they can be written into procedures. In the latter case, backgrounds and pencolors are programmed into appropriate places where specific color is desired.

Here's an example (for the Apple II series) of how color can be written into a procedure which defines four different colored squares lined up horizontally on the screen. First, you define the subprocedures **SQUARE** and **MOVE** because they are needed in the final product. **SQUARE** creates a square with sides 30 turtle steps long. **MOVE** uses **PU (PENUP)** and **PD (PENDOWN)** commands to move the turtle to the next location where a square is to be placed.

Now take a look at the final procedure. The first sequence of commands places the turtle far to the left side of the screen so that there is enough room to fit all four squares. On the following lines you will see that each time you use the

You bought a computer to cultivate your kids' minds. Make sure it's bearing fruit, not growing vegetables.

Introducing a whole crop of Learning Adventure games from Spinnaker.

When it comes to cultivating adventurous young minds, the computer's potential is endless.

Unfortunately, the search for software that makes the most of that potential has been endless, too.

That is, until Spinnaker created the Learning Adventure Series. A unique collection of games that reward curiosity with

hours of adventure and learning. So the time kids spend with our games will help them develop valuable skills. Instead of just tired thumbs.

But what really makes our Learning Adventure games unique — educational value aside — is how much fun they are. Which isn't too surprising when you consider you can do things like bargain with aliens, search a haunted house, or build your own railroad empire.

In fact, our games are so much fun, kids will really enjoy developing some very important skills. Deductive reasoning, note taking, and problem solving, for instance.

So, if you're in the market for software that will truly cultivate young minds, pick the Spinnaker Learning Adventure Series.

It's the best way to be sure your search will be fruitful.

Spinnaker Learning Adventure games are available for Apple,® Atari,® IBM® and Commodore 64™ home computers.

It's new! PRESIDENT'S CHOICE.™

Welcome to the White House — you're the President of the United States! Make the right decisions and you'll win re-election. **Ages 13-Adult.**

It's new! ROCK 'N' RHYTHM.™

It's your own recording studio, complete with instruments and equipment. Play and record existing music, or experiment with your own melodies and rhythms. **Ages 10-Adult.**

It's new! TRAINS.™

You're in charge of an old-time railroad — and whether it turns into a bonanza or a bust depends on how well you run it. But either way you'll find that working on this railroad is a challenge — and a lot of fun! **Ages 10-Adult.**

LEARNING LOGO

THE FAMILY CHALLENGE

Here's a challenge that will give your family an opportunity to celebrate the holiday season with Logo. The challenge begins by entering the procedures shown below into your computer. You will see the outline of a Christmas tree appear on the screen.

```
TO TREE
PU BK 40 LT 90 FD 90 RT 180 PD
TRIANGLE
FD 80 RT 90 PD
TRUNK
END
```

```
TO TRIANGLE
REPEAT 3 [FD 180 LT 120]
END
```

```
TO TRUNK
REPEAT 3 [FD 20 LT 90]
END
```

Note that the main procedure, TREE, calls for two subprocedures: TRIANGLE and TRUNK. Can you tell what each of these subprocedures contributes to the final picture?

Now, the tree needs all kinds of decorations—every size and shape is fair game in making this the most festive tree ever! Have each family member design a procedure to create at least one type of ornament. Use your skills to make polygons and circles—perfect shapes for tree-trimming creativity. Some members of the family might also want to design a gift or two to put under the tree. Each gift shape should be defined as a separate procedure.

The final step is to combine the TREE procedures shown above with everyone's procedures for ornaments and gifts—and then add color! This will require family members to put their heads together and work as a team.

Call your final procedure XMAS. The first step is to put in the TREE procedure. Then, remembering to use PU (PENUP) and PD (PENDOWN) commands as you go, add steps to move the turtle to the points where you wish to place your special ornaments and gifts.

Put color into the final picture by adding PC and BG commands to the main procedure. The final procedure might start out something like this:

```
TO XMAS
BG 1
PC 2 TREE
PU RT 90 FD 100 PD
PC 4 ORNAMENT1
PU RT 180 FD 15 PD
PC 3 GIFT1
```

... and so on until each of your ornaments and gifts is where you want it. As you can see, the tree, the ornament, and the gift are each assigned their own pencolor just before they are drawn in the command sequence. (The example above is written for the Apple, using Krell/Terrapin Logo. Remember to check your manual for specific information on how your Logo system specifies color.)

Season's greetings and have fun! From the Logo turtle.

GOING IN CIRCLES

Up until this point, we have talked mostly about right angles, and generally squares have been used to illustrate Logo concepts and commands. This is because everyone— young children as well as adults— easily understands what a square is and can quickly recognize the forward and 90-degree turn motions needed to create a square.

Now it's time to move beyond right angles and explore circles. On the way, we will practice making many-sided geometric shapes, or polygons, ranging from triangles, to pentagons, to shapes with over 100 sides. The end result should move children toward discovering that one way to create a Logo circle is to come up with a formula for making a figure with 360 sides. Eventually the turtle will repeat FD 1 RT 1 movements until it has created a full circle.

LEARNING BY DISCOVERING

First, challenge your children to see if they can figure out how to make an equilateral triangle with turtle graphics. Many will need reminding that this kind of triangle has three equal sides. See what they come up with and how long it takes them. For that matter, adults and teenagers should give it a try, too, paying particular attention to the thought processes they go through and, again, how long it takes them to solve the problem.

Children will soon discover that they need to do a lot of experimenting with angle sizes in order to get a triangle with equal sides to work. Here's a hint: A quick way to determine how far you want the turtle to turn with each angle of a polygon is to divide 360 by the number of sides in the figure.

Compare notes. Help youngsters to discover the number of turtle turns that were needed in each angle to make the finished triangle. Point out that in creating an equilateral triangle they are telling the turtle to repeat a pair of operations (i.e. drawing a line, turning by a certain angle) three times. How might this knowledge be used to increase the efficiency of a triangle-drawing procedure? Hint: Since all sides and angles of an equilateral triangle (or any regular polygon) are equal, the most

PC command along with a number, it changes the next square to a new color.

```
TO 4SQUARES
PU LT 90 FD 80 RT 90 PD
PC 2 SQUARE MOVE
PC 3 SQUARE MOVE
PC 4 SQUARE MOVE
PC 5 SQUARE MOVE
BG 1
END
```

Using the color numbers listed earlier, read the procedure and see if your family can figure out what color each of the four squares will be. Then, see who can determine what color the background turns at the end of the procedure. (Answers: square 1 is green, square 2 is violet, square 3 is orange, square 4 is blue, the background color is white.)

IN A FLASH

Adding color to procedures that form distinct figures makes sense. For instance, if a clown face has been defined, different pencolor commands can be put into the final procedure to make blue eyes, a red nose and mouth, and orange hair.

Kids love to add flashing colors to almost anything they design. Try adding **TO FLASH** to the end of any procedure.

```
TO FLASH
REPEAT 5 [BG 0 BG 1 BG 2 BG 3 BG 4 BG 5]
END
```

FLASH directs the computer to flash all of the colors in order five times. Add it to the end of the 4SQUARES procedure you did earlier and see what happens.

IF YOU OWN A HOME COMPUTER
THERE'S ONE NAME YOU SHOULD KNOW:

ACTIVISION

Activision's bringing its unique kind of excitement to your home computer. We offer you the best entertainment software for the Commodore 64, Apple II, IBM PC, IBM PCjr., Atari, and Adam home computers. *Realistic simulations* like Space Shuttle: A Journey into Space.™ *Interactive fiction* like Mindshadow™ and The Tracer Sanction.™ *Creativity tools*

like The Designer's Pencil.™ *Adventure classics* like Pitfall II: Lost Caverns.™ *Action hits* like H.E.R.O.™ *Sports challenges* like The Activision Decathlon. And the *strategy and action* of Ghostbusters.™

While programming in **BASIC**, you can use the **16 COLORS** in your text (like the **SmartWriter™** color options); automatically **RENUMBER** your program lines; a **SIDE CALCULATOR** to do **HEX** and **Decimal Conversions** in **BASIC**; and more.

CASSETTE FOR SmartBASIC \$22.00

BONANZA PACKAGE

Not only useful and fun, but these programs can show you some of the capabilities and routines of **SmartBASIC**. This package, by **Martin Consulting**, is packed with programs:

- Mini Assembler
- Disassembler
- Sound Generator
- Song in 3 Voices
- Hi-Res Drawing
- Othello Game
- Graphic Adventure
- Math Game
- Spelling Game
- Home Finances
- Filing System
- Label Maker
- Typing Tutor
- Magic Program
- Tennis
- Breakout
- Designs

CASSETTE FOR SmartBASIC \$35.00

Write or call for detailed **FREE CATALOG**
VISA & MASTERCARD ACCEPTED
C.O.D. Shipments - Add \$2.00

Prices include shipping, handling & tax

Orders normally shipped in 24 hrs.

LEARNING LOGO

efficient way to create such a figure is to use the **REPEAT** command. Remember, **REPEAT** is used along with a number indicating how many times the commands within the brackets are to be repeated. For instance, an efficient procedure for an equilateral triangle might look like this:

```
TO TRI  
REPEAT 3 [FD 30 RT 120]  
END
```

Next, have family members try drawing a pentagon, or five-sided figure, like the one below. And, after that, try the hexagon, or six-sided figure. Make sure to use the **REPEAT** command in each procedure that is defined.

Next, help your kids examine the common elements in the commands that have been used to define these shapes. Toss in the formula for a square (a four-sided figure) as well, and see what similarities they identify. Most kids will need help with this aspect of the discovery learning approach.

Help them to note these four things:

1. Making any regular shape requires repeating a pair of operations (e.g. draw/turn) several times.
2. The number of repeats needed to make the shape is the same as the number of sides in the shape.
3. The size turn (degrees in each angle) needed to make the shape can be determined by dividing the number of sides into 360.
4. The number of forward steps in a side can differ from figure to figure.

To help youngsters get even closer to discovering how to make a circle, have them try a 10-sided figure next, then a 36-sided figure. Suggest that they also begin to experiment with sides that are shorter, i.e. with fewer turtle steps in them. (This will help prevent the turtle from going off the screen, or wrapping around as it attempts to draw the shape.)

Keep going by attempting figures that have over 100 sides. For instance, try a 120-sided figure with sides only four turtle steps long, then a 360-sided figure with sides

that are only one turtle step long. What has been created with the last scenario? A circle!

TIME TO TALK

Naturally, children are going to need some guidance through the discovery learning process and it does require mastery of the basic arithmetic skill of division. (If you're not comfortable with this process, you can either skip it, or better yet, learn along with your child.) Generally, children in the fourth or fifth grade are ready to handle the concepts involved in creating Logo polygons and circles, and have mastered the requisite arithmetic skill of division. Even at that, you will need to talk to them about what they think might be happening. Ask open-ended questions to help them draw conclusions about the progression from 3-sided figures to figures with 360 sides—from triangles to circles. For example, when looking at two circles, you could ask "Why do you think that circle is bigger than the one we just drew?" rather than "Which circle is bigger?"

Parents might wonder why it wouldn't be much easier just to give youngsters the formula for a circle and then show them how to change its size by altering the number of turtle steps in each side. It works. They can make circles that way, but they are missing the opportunity to think through what is happening. In short, they haven't had to put any problem-solving skills to work, thereby circumventing one of the major strengths of what Logo can teach youngsters.

That's not to say that very young children should not use circles in Logo designs. Even preschoolers can put circles to work in their pictures if parents or older brothers or sisters define a set of circles for them to use. However, once they are old enough to understand the conceptual basis for the commands Logo uses to make circles, it would be helpful for parents to back track and help them examine the meaning of those commands.

In the "Family Challenge" this month we provide a Logo program that outlines a Christmas tree. Logo learners are encouraged to write procedures that add colorful ornaments to the tree and packages underneath it. Next month we will take a look at using variables in Logo procedures, making it easier to create shapes of differing sizes. ☐

USA Adventure™

An Adventure in Education™

AGES
10
and Up

The entire family will be challenged and entertained as players travel through time and states learning U.S. history, geography and trivia. For the Commodore 64, Atari (48K), Apple II series, and IBM PC/PCjr.

ROMPER ROOM'S I LOVE MY ALPHABET™

AGES
2-7

For the first time, the techniques of one of the most respected names in children's education are available for your Commodore 64, Atari (48K) and Apple II series home computers.

In affiliation with **WARNER SOFTWARE, INC.**

FIRST STAR SOFTWARE INC.

Picture a computer under \$1000
that runs over 1000 of the best programs
written for the IBM PC.

Now picture this.

There's a lot that's new about PCjr and it's all good news for you.

PCjr now has a lower price. A new typewriter-style keyboard.

A new option that can give user memory a dramatic boost.

And new business and personal programs to add to its fast-growing library of up-to-date programs.

All of which can make PCjr the most useful computer a little money can buy.

It comes standard with 128KB of user memory — twice the memory of its most popular competitor. An advanced 16-bit processor. And a double-sided diskette drive that can store over twice as much information as most single-sided drives.

With all these features, PCjr can run over a thousand of the most popular programs written for the IBM PC. And with the new optional 128KB Memory Expansion Attachment,

it can run over a thousand more.

PCjr also runs a growing number of powerful cartridge programs. They work faster than

diskettes, and don't take up a bit of user memory. The three newest examples being Lotus 1-2-3,™ the fascinating PCjr ColorPaint and Managing Your Money™ by financial expert Andrew Tobias.

As its library of software keeps growing, PCjr keeps growing, too. By leaps and bounds. Because IBM designed it with 13 ports for add-on options. And a modular construction that will accept new capabilities down the road. Even those that haven't been invented yet.

All this in a

computer that weighs a mere 10 pounds.*

Right now, PCjr can run the powerful Lotus 1-2-3™ on diskette (with Lotus 1-2-3 PCjr Installation Kit and additional memory). The new cartridge version, requiring no additional memory, will be available this fall.

Managing Your Money™ by Andrew Tobias, new on cartridge for PCjr, is a comprehensive personal financial advisor and manager.

Turn your screen into a canvas. The new cartridge program, PCjr ColorPaint, lets you create with the added dimension of color.

The new PCjr Memory Expansion Attachment can give memory a quick lift to 256KB. Or, along with a PCjr Power Expansion Attachment, all the way to a hefty 512KB.

Takes up just a bit over a square foot of desk space. And costs less than \$1,000†.

without monitor.

Picture yourself with a PCjr.

Try one out and see what's

new at an authorized IBM PCjr

dealer or IBM Product Center.

For the name of the store nearest you, call 1-800-IBM-PCJR. In Alaska and Hawaii, call 1-800-447-0890.

More computer for your money.	
See how PCjr compares with other computers at its price.	
Memory	Software
User Memory (RAM): 128KB (expandable to 512KB)	Runs over 1,000 programs written for the IBM PC
Permanent Memory (ROM): 64KB	Runs both diskette and cartridge programs
Diskette Drive	Display
Double-sided, double density	40- and 80-column
Capacity: 360KB	Resolution:
	4-color: 640h x 200v
	16-color: 320h x 200v
Processor	Expandability
16-bit 8088	Open architecture
Keyboard	Optional 128KB
Typewriter-style	Memory Expansion Attachment(s)
Detached, cordless	13 ports for add-ons, including built-in serial interface
Warranty	
1-year limited warranty	

PCjr's new typewriter-style keyboard adds a nice touch to business, home or educational computing.

IBM PCjr

Growing by leaps and bounds.

Managing Your Money is a trademark of MECA. 1-2-3 and Lotus are trademarks of Lotus Development Corporation.

*Weight does not include power pack and monitor. †IBM Product Center price.

Little Tramp character licensed by Bubbles Inc., s.a.

Dear Smith-Corona,

Imagine sending an important letter printed on a dot matrix printer.

"Impossible," I would have said before. "Impeccable," I say, now that I've bought your new dot matrix.

A dot that has two kinds of printout (graphics and text) for very little shell-out. That's impressive. And so very practical. A "two-in-one" fast dot. One that does everything I used to use two to do.

I was going to call you to congratulate you on your ingenious dot. But then I thought, and decided a letter would be more perfect.

Thank you,

Ron Rosenfeld
Co-Chairman
Rosenfeld, Sirowitz & Lawson

At last, dot plus dash for very little cash.

The dot matrix printer with superb quality correspondence plus high-speed graphics. For under \$800.

Besides all the super high-speed graphics you expect, what else can you do with the Smith-Corona dual-interface D-200 dot matrix printer? You can print at a speed of 120 CPS (that's dash), with 80 characters per line. And you can write with quality. You can even use computer paper or letterhead with a removable tractor feed, which comes as standard equipment.

You can italicize to make a point. Emphasize to point out a good idea. Emphasize and italicize to make a point about a good idea. Enlarge if it's a big idea. Then subscript or superscript to make it all add up.

It's easy to see why so many people think a Smith-Corona printer is the one and only dot.

 **SMITH
CORONA™**

THE BEST-EVER

SHOPPING GUIDE

FOR • COMPUTER • LOVERS

Buying the right computer and peripherals for your needs requires homework and legwork. We've done the legwork for you so you can let your fingers do the shopping in our "Best-Ever Shopping Guide for Computer Lovers." FAMILY COMPUTING research has shown that you—our readers—want product information. So, we turned to our staff and contributing editors and put together some of the best, or the most time-tested, or the most offbeat products on the market—from "dream machines" to picture-perfect software to computer classes on a steamship down the Ol' Mississippi. We've even provided you with some tips on how to shop and some guidelines for easy-to-make gifts. Certainly, not all of our suggestions may be the right ones for you. But, they might provide you with a bit of inspiration during this holiday shopping season. Take a look on the following pages.

A GALAXY OF GIFTS

IDEAS FROM \$3 TO \$3,000

BY DEBORAH ZIPKIN

Better to give than to receive. But what to give to the kids' teachers, the nephews and nieces you haven't seen in months, the newspaper deliverer, or your great aunt in Anchorage? You want to give each one something special—something fun, and maybe even useful, so they'll know you spent a minute or two thinking about it. How about a computer gift? Here are some

suggestions to make last-minute shopping a great deal easier. Check out these gadgets and gizmos all specially designed to add sparkle to any computer lover's holiday. Inspire the non-computerist in 1985 with some of these novel computer ideas. Surprise your own computer with a gift this year, or wrap up next year's shopping list now.

Send Them Packing

There's one in every family—someone whose hair stands on end and whose face turns pale when the word "computer" is mentioned. They are "computer phobics." The antidote? A completely nonstressful computer course. Grab your computer phobic and head to **Club Med**. Spend a week in Mexico or the Bahamas.

There you can learn to use any of the most popular personal computers, work with BASIC, and get an introduction to programming. A dozen Club villages throughout the world now offer computer

workshops. Prices for a week's stay range from \$490 to \$900 per person, and at some villages kids up to age 6 are welcome for free, and those 7-11 for half the adult fee. For more information, call (800) 528-3100, or write Club Med at 40 W. 57 St., New York, NY 10019.

For those who might prefer to do their learning floating down the lazy waters of Ol' Man River, Class Associates offers a week-long computer cruise aboard a paddlewheeler, **The Mississippi Queen**. Experiment with a variety of computers under the guidance of 10 instructors. Prices range

from \$1,295 to \$1,895 per person per week, including meals, accommodations, and computer instruction. Contact Class Associates Inc., P.O. Box 492, 644 Danbury Road, Wilton, CT 06897. Call (800) CLASS-CO for departure dates.

For women who want to take the plunge and become

computer comfortable, the nonprofit **Women's Computer Literacy Project** has the perfect program. Look for WCLP classes in New York and San Francisco. Courses are limited to 12 students, and cover everything from computer selection to computer languages and data-base management. The intensive, 2-day program costs \$245 per student in California and \$295 in New York. In San Francisco there's an evening class for \$175; it's 12 hours of training over a 1-month period. Call (212) 517-8871 or (415) 647-1404, or write to the Women's

Computer Literacy Project, 1195 Valencia St., San Francisco, CA 94110 for class schedules.

Good Reads

An avalanche of new computer activity books was published this year. For young readers, check out **The Bytes Brothers** series, \$2.25 from Bantam Books, 414 E. Golf Road, Des Plaines, IL 60016. Aimed at preteens, the four

computing skills to solve various mysteries.

K-Power Books, \$4.95 each from Scholastic Books, 730 Broadway, New York, NY 10003; (212) 505-3612, are filled with original programs for Commodore, Apple, Atari, TI, and IBM computers. Kids experiment with computer

monsters and visit space.

One new release that will thrill adults as well as kids is **Inside the Personal Computer**, \$19.95, published by Abbeville Press, Inc., 505 Park Ave., New York, NY 10022. Open the book and a three-dimensional computer pops off the page. Tour through a disk drive, meet a disk, and get to know the computer inside and out. Diagrams, charts, and clear text support the charming pop-up illustrations.

Are thoughts of Christmas already putting pounds on you? Lucille Roberts, has the answer: **Computerise: Your**

21-Day Personalized Body Shaping Program, \$16.95 from Simon and Schuster, 1230 Ave. of the Americas, New York, NY 10020; (212)

245-6400. The book's questionnaires and charts, all based on Roberts' computerized spa program, help you develop a personalized exercise

regimen.

For the friend whose modem is a favorite *modus operandi*, check out Mike Crane's **The Computer Phone Book**, a compilation of the numbers of more than 400 private and corporate on-line data bases. It's available in bookstores, or order it by mail for \$9.95 from NAL Books, P.O. Box 999, Bergenfield, NJ 07261.

Don't be put off by the title of **The Whole Computer Catalog**. Editor Narda Schwartz has put together a 400-plus-page computer directory of hardware, software, applications, careers, schools,

health issues, magazines, associations, and stores. To order the catalog send \$35, plus \$2.50 postage and handling, to Designs III, 515 W. Commonwealth Ave., Fullerton, CA 92632, or call (714) 871-9100.

And, of course, give a year's subscription of **FAMILY COMPUTING** to friends and family. It's the perfect monthly gift, all year long, and they'll receive a free book of 10 programs, too. \$19.95 for the first subscription, \$13.95 for each additional one. Write to FAMILY COMPUTING, 730 Broadway, New York, NY 10003, or call (212) 505-3632.

Two for the Road

The ultimate gift for any computer buff is, of course, another computer. If you're in the market, you might want to consider one of the new portables. Epson's new, 4-pound **Geneva** is notebook size, has rechargeable batteries, and costs \$995. Geneva comes with three built-in programs (*WordStar*, *The Scheduler*, and *VisiCalc*), 64K RAM, 32K ROM, and a full-size keyboard. Optional additions include a

portable printer, disk drive, and more memory. Contact Epson America Inc., 3415 Kashiwa St., Torrance, CA 90505; (800) 421-5426 for details.

The Portable. Hewlett-Packard's notebook-size com-

puter is a bit heftier, weighing in at 9 pounds. It is battery-powered, and also comes with three built-in software packages: *Lotus 1-2-3*, *Memomaker*, and *Personal Applications Manager*. The Portable, which sells for \$2,995, has 272K RAM, 384K ROM, and a built-in modem. A portable, battery-operated disk drive and the Hewlett-Packard Think-Jet Printer (HP 2225C) can join The Portable on the road. Call (800) FOR-HPPC for more information, or write Hewlett-Packard at 1000 Northeast Circle Blvd., Corvallis, OR 97330.

Deck the Halls

Welcome your relatives, neighbors, or even Santa during the holidays, with a personalized banner hung festively from your mantelpiece. Contact Advanced Analytics Technology Corp., Business and Technology Center, 701 Devonshire Dr., Champaign, IL 61820 or call (217) 359-5888 to order **Banner**, a program for the Apple II series, Apple III, and IBM PC. For \$24.95 plus \$2.50 postage

and handling, your printer can output a parade of 12-inch-tall characters in the message of your choice.

Send out your holiday cards yet? Want to try customizing them? Zazda's **Zcard Print**

program offers 32 card formats and includes 30 sheets of paper with matching envelopes. It can be ordered for \$49.95 plus \$2 handling from OMNI International Inc., P.O. Box 11708, Dept. Z, Kansas City, MO 64138; (800) 251-0071. Use your IBM PC or IBM PC XT and a dot-matrix printer to design Valentines and birthday cards, too.

The Print Shop, from Broderbund Software, 17 Paul Drive, San Rafael, CA 94903; (415) 479-1170, at \$49.95 (see review in the September FAMILY COMPUTING, page 120), is a software package for the Ap-

ple II series. Use it to create greeting cards, signs, or letterheads.

Tuck in an automatic ribbon re-inker as a gift for your printer (cartridge or spool-type). **MacInker**, from Computer Friends, 6415 SW Canyon Court, Suite #10, Portland, OR 97221; (800)

547-3303, will re-ink any variety of fabric ribbon. MacInker lists for between \$54-\$69, depending on your brand of printer. \$3 will get you a 2-ounce bottle of ink in red, green, yellow, brown, black, blue, or purple to jazz up your greeting cards.

Got friends who own an IBM with at least DOS 2.0 and Advanced BASIC? Ask **Greetingware**, Roxbury Research Inc., RD 1, Box 171A, Roxbury, NY 12474; (607) 326-4070, to send them a gift/card all-in-one surprise disk, which comes complete with Christmas pictures, a holiday mes-

sage, and six carols. This super greeting costs \$13.95. For \$3 more the company will add in your personal message.

Sounds and Sights

Support the budding Beethovens, Botticellis, and Demostheneses in your family with computer-assisted creativity.

Hook up **Melodian**, \$200

from Melodian Inc., to your Commodore 64. It features a three-octave keyboard instrument, and *ConcertMaster* software. The package includes 16 preprogrammed instrument sounds, teaches note-reading, and composing. For IBM PC:

version planned for Apple this winter. 115 Broadway, Suite 1202, New York, NY 10006; (212) 406-5163.

For the novice who hankers for something completely different, the new touch-sensitive **ColorTone Keyboard** by

Waveform might be just the thing. Designed for the Commodore 64 by the same people who created *MusiCalc*, the ColorTone Keyboard has 25 piano-like keys, 12 musical-scale options, and preset melodies ranging from classical to Technopop. It is available at computer stores or from Waveform Corp., 1912 Bonita Way, Berkeley, CA 94704, for \$79.95; call (415) 841-9866 for details.

Is the keyboard virtuoso in your home complaining that playing music is fun, but writing it down is a bore? **Polywriter**, by Passport Music Software for the Apple II se-

ries, turns whatever is played on a synthesizer keyboard into printed music. The program sells for \$299. However, would-be composers must invest in a keyboard instrument

with MIDI (Musical Instrument Digital Interface) jacks, a Passport MIDI Interface (\$195), and a dot-matrix printer to get the system going. Write Passport Music Software, 625 Miramontes St., Suite 103, Half Moon Bay, CA 94019, or call (415) 726-0280 for the complete story.

Koala Technologies is encouraging artists and composers to take pen in hand—light pen that is. With the **Gibson Light Pen** system, \$249, bypass the computer keyboard and draw with light directly on a display screen. The system includes four complete

software packages: *PenMusician*, *PenDesigner*, *PenAnimator*, and *PenPainter*, as well as *PenTrak*, a language for

generating original light-pen programs. Currently available for the Apple II/II plus/IIe. Koala says it will market Commodore 64, Atari, and Apple IIc versions by year's end. Contact Koala Technologies Corp. at 3100 Patrick Henry Drive, Santa Clara, CA 95052; (800) KOA-BEAR.

But before you draw any conclusions, check out **Doodle**, a \$39.95 software package for the Commodore 64, from City Software, 735 W. Wisconsin Ave., Milwaukee, WI 53233; (800) 558-1008. Grab your joystick or trak ball and select from one of nine differ-

ent paintbrushes. Zoom in, use color, build boxes, make mirror images, and turn negatives into positives. Output your work on a Commodore 1525 printer, Epson, Gemini,

ProWriter, or Okimate 10.

For the person who doesn't quite believe that a picture is worth 1,000 words, Currah Technology's **TheVoice Messenger** will start their Com-

modore 64 talking in no time. With two voice selections, an infinite vocabulary, and even intonation, this \$49.95 system is easy to install and steals no RAM from the BASIC work space. Pick one up at your local department store, or contact Currah Technology, 50 Milk St., 15th Floor, Boston, MA 02109; (617) 357-8084.

Take a look at one of the sleekest, most exciting—not to mention most expensive—joysticks around. **The Turbo Stick**, \$395 plus extra charges for connecting cables, from the KA Design Group, 6300 Telegraph Ave., Oakland, CA 94509, looks like a small spaceship. It can make the cursor move in five different

ways at seven different speeds. Call (415) 654-6300 for more details.

Gifts a Computer Could Love

Computers really don't ask much of their families. They need a place to hang out that's relatively free of dust, dirt, and spills, and they require a

reliable source of power.

When the computer is stationed in the family room, or gets a regular workout at the kitchen table, it is exposed to all kinds of danger. That's when a good quality **key-board cover** becomes a gift of mercy. Diversified Manufacturing Inc., 4722 E. 8th St., Wichita, KS 67208, has rigid, plastic covers available for Apple II series, Macintosh, IBM PC, and Commodore 64 computers for \$14.95–\$17.95. Call (316) 683-4265 for ordering information.

Where were you and your computer when the fuse blew

and the lights went out? One way to deal with flickering power, blown fuses, or blackouts is to invest in an emergency power supply. **Minuteman**, a \$435 emergency-power and voltage-protection package, sounds an alarm and switches your computer to 15 minutes' worth of battery power when electrical service is interrupted. It also keeps the electricity flowing into the computer and disk drive at a constant 120 volts. Minuteman, a product of Para Systems, can be used with Apples, Commodores, IBM PCs, and 60 other micro-computer models. Call (214)

869-1688 or write 11425 Mathis St., Suite 404, Dallas, TX 75234.

The Max, which comes in six models from Panamax and costs \$79–\$159, is a simpler mechanism that will relieve worries about power surges, but not supply any emergency power. To keep a constant 120 volts flowing into your equipment, just plug your CMU and your disk drive into Max and plug Max into the wall. Voilà! Contact Panamax at 150 Mitchell Blvd., San Rafael, CA 94903, or call (415) 472-5547. The Max works with almost all personal computers.

Surprise a friend with a membership to an information network this year, or give one to your family. A computer, a modem, and a phone are needed to join. Members can use their network connection to shop at home, get the news, talk with other users, and play games. There are several national networks to select from. **CompuServe** charges \$39.95 to sign up and from \$6 to \$15 an hour to use the service, depending on the hour of day. Call (800) 848-8199 or write 5000 Arlington Centre Blvd., Columbus, OH 43220. **The Source** costs \$49 to sign up

and charges from \$7.75 to \$20.75 an hour. Call (703) 734-7500 or write 1616 Anderson Road, McLean, VA 22102. **Delphi** has a sign-up cost of \$49.95 and charges \$6 to \$16 an hour. Contact Delphi at 3 Blackstone St., Cambridge, MA 02139; (800) 544-4005. Rates may change.

Station Break

Avoid Hacker's Back! Get your favorite computer buff a decent chair for his or her

workstation.

Scandinavian Design, headquartered at 603 Worcester Road, Natick, MA 01760, sells the **Balans** chair, a good-looking and ergonomically designed seat. Scandinavian Design says this \$180 chair is good for your back. Call (617) 655-2830 to learn where the store nearest you is located. You also will be able to see its complete line of teak work-station furniture.

For the hacker with more traditional tastes, cast an eye over **A.J. Hilliard, Inc.**'s oak-furniture brochure. Inspect the \$696 roll-top desk de-

signed to hold a CPU, keyboard, printer, and disk drive. Add the \$287 oak bookcase and you have storage space for manuals and magazines. Write to 111814 Coursey Blvd., Suite #425, Baton Rouge, LA 70816, or call (504) 927-0270.

If your taste runs more to modern, check out **The Smart Desk**, a sleek, laminated desk (\$199) with space for a computer, a monitor, and accessories, made by The Furniture Byte, Inc. You can end the paper chase with **The Smart Stand** (\$149), a printer stand with storage space for

supplies. This easy-to-assemble furniture is available directly from the manufacturer or selected dealers. Call (800) 426-5301 or write The Furniture Byte Inc., P.O. Box 1757, Longview, WA 98632.

Perfect Pets

Know someone who has been clamoring for a pet? What about a robot instead? This year the Tomy Corp. introduced its family of robots. There's baby **Dingbot**

(\$10), a 5-inch, battery-powered toy that rolls around the floor and switches direction when it bumps into things. **Verbot** (\$65) is about a foot tall and can be programmed to respond to eight spoken commands. **Omnibot**, at about \$250, is the most sophisticated. It is 2 feet tall, and contains a microcomputer, a cassette tape deck, and an alarm clock. Contact the Tomy Corp. at 901 E. 233 St., P.O. Box 6252, Carson, CA 90749, or call (213) 549-2721. The 9-inch **Turtle Tot Personal Robot**, \$299.95, is a different breed of mechanical

pet. A learning tool and an introduction to Logo, Turtle Tot moves around on the floor and draws on paper. Every Turtle Tot comes assembled with a 21-foot leash, 10 color pens, built-in software, and an optional RS-232 interface. It will interact with any Apple, Atari,

Commodore 64, IBM, or TRS-80 computer. A speech package (\$99.95) is optional. Order from Harvard Associates Inc., 260 Beacon St., Somerville, MA 02143, or call (617) 492-2999.

Grab Bag

Try **Rami**, an introduction to computer thought process. You don't need a CMU to play this hand-held pinball game. Send the 32 plastic balls through 16 tunnels, and uncover the basics of the binary system. It's available for

\$19.95 from My Child's Destiny, P.O. Box 7366, San Francisco, CA 94120; (800) 445-5678.

A call to Sports Software will bring a trained consultant and a **CompuTennis** computer to your tennis court. Pay \$75 and the computer will track your tennis game and give

you, or perhaps a worthy opponent, a printout of your strengths and weaknesses on the court. Call Sports Software at (415) 494-2111, or write to 2 Palo Alto Square, Suite 120, Palo Alto, CA 94306.

Feeling blue? **Expando-Vision** has a program to pick you up. Or it may help a spouse stop smoking, get skinny, or succeed better on the job. Hook up the \$89.95 Expando-Vision hardware to your Atari, Commodore 64, or VIC-20 and your television, and subliminal self-improvement messages will flash regularly on the screen. Any of the

eight programs, at \$39.95 each, are sure to make a difference in your life if you watch the TV for an hour a day, says the manufacturer. Order Expando-Vision by calling Stimutech Inc. at (313) 761-9027 or writing 3711 Plaza Drive, Ann Arbor, MI 48104.

Slightly more down-to-earth, a perfect present for any little angel, is Koala Technologies' **Muppet Learning Keys**, a \$79.95 computer keyboard and software package. Available for the Apple IIe, IIc, and Commodore 64, the Muppet keyboard has number keys, a paintbox of colors, letter keys

in alphabetical order, and a HELP key that brings Miss Piggy on screen to administer first aid. Get information by dialing (800) KOA-BEAR, or write 3100 Patrick Henry Drive, Santa Clara, CA 95052.

Stocking Stuffers

Tie one on. **Harriet Carter Gifts Inc.** has men's ties decorated with a pattern of computer terminals. The ties are \$12.98 plus \$2.95 postage and handling, and are available in blue, brown, or maroon. The same company also has a coffee mug that boasts the message "Old Computer People Never Die—They Just Lose Their Memory" for \$3.50 plus \$2.25 postage and handling. Write Dept. 44, North

Wales, PA 19455 or call (215) 362-5186.

Show off those legs with **Computext** hosiery—pantyhose printed with step-by-step commands for a computer game. In white, ivory, and gray with the instructions printed in bold colors, Computext cost approximately \$12 a pair. For information, write to Crystal Creations, 711 W. 17th St., Costa Mesa, CA 92672; or call (714) 631-1414.

Want to be thought of every day in 1985? Send someone the 1985 **Computer Term-A-Day Calendar**. It has 365 computer words and their def-

initions on tear-off sheets. The calendar is \$5.95 plus \$2.25 shipping and handling from Abbey Press, 109 Hill Drive, St. Meinrad, IN 47577; (812) 357-8251. For \$7.95 plus \$2.25 shipping and handling send for Abbey Press' set of

three ornaments carved to look like computer terminals. **Sweet Gum Inc.**, 15490 NW 7th Ave., Suite 204, Miami, FL 33169; (800) BE-

SWEET, specializes in gifts, such as "Computer Expert" T-shirts (\$8.95) and microchip jigsaw puzzles—\$7.95. Check with Sweet Gum for postage

and handling charges.

Commodore 64, Atari, and Apple IIe and IIc owners will flip over the **Diskette Notcher** (\$14.95 plus \$1.50 shipping). It's a handy tool that adds another "write-able" notch to single-sided disks so the flip side becomes usable. Contact Quorum International, Industrial Park Station, P.O. Box 2134, Oakland, CA 94614; (415) 769-6080.

The best byte around is bound to be the 1-pound **Chocolate Personal Computer** for \$18.95 postpaid, from the shop in The Computer Museum in Boston. The

shop's catalog is full of wonderful gift ideas for computer buffs. Call (617) 426-2800 or write The Computer Museum, 300 Congress St., Boston, MA 02210 and request a copy. **FC**

Holiday

How-To

FOUR EASY-TO-MAKE GIFTS

BY JO SPRINGER

Surprise the computer enthusiast in your family with a homemade gift for the holidays! For the programmer who works late into the night, a *Printout Scarf* to keep warm; for the long trek home from school, a *Tote Bag*; for the next member of the computer generation in your family, a *Baby Bib*; and for your Christmas tree, a *Computer Ornament*.

Follow these simple directions and you can give the most original computer peripheral of the year!

JO SPRINGER's needlework designs have appeared in numerous publications including *Woman's Day*, *Family Circle*, and *Good Housekeeping*. She is the author of *The Pleasures of Crewel and Creative Needlework*, among other books, and works in media ranging from woodworking to lacemaking.

SOFTWARE SPECIALS

TO BRIGHTEN YOUR HOLIDAY

One of the best stocking stuffers this holiday season may be software, and it could also be one of the best buys. To make your holiday brighter, quite a few software manufacturers are offering discounts through rebates, coupons and two-for-one deals. The chart below provides a roundup of some of the special offers. But before you make your holiday gift list, be sure to ask your local software dealer about other companies' offerings. The dollars you save will be well worth the time spent in research.

Manufacturer	Offer/Time Limit	Software/Products Featured
Advanced Ideas (415) 526-9100	Free LearningWare disks w/purchase of educational games. At dealer's discretion.	Buy games at \$39.95 (Apple, IBM), \$34.95 (C 64)/get free disks valued at \$19.95: <i>The Game Show/People Places and Things; Tic Tac Show/History; Master Match/Foreign Language</i>
Apple Computer Inc. (408) 973-4409	Redemption certificates w/Ile or Iic. Nov. 1—Jan. 15, 1985.	Apple Logo \$100/\$15 rebate; <i>Charlie Brown's ABC's, Spell It, Story Maker, Typing Tutor III</i> , \$39.95/\$6; joystick \$60/\$10; Mouse Iic \$99/\$10, Ile \$149/\$15; <i>AppleWorks</i> \$250/\$25; <i>Dollars and Sense</i> Iic \$119/\$18, Ile \$100/\$15; <i>Homeword Writer</i> \$69.95/\$10.50, w/ <i>Speller</i> \$99/\$15; <i>Print Shop</i> \$49.95/\$7.50; <i>AppleScribe Printer</i> \$299/\$50; <i>Dazzle Draw</i> \$59.95/\$9; <i>Echo Plus/Cricket</i> \$149/\$22.50, \$179/\$27; <i>Music Construction Set</i> \$39.95/\$4.80; <i>Flight Simulator II</i> \$49.95/\$7.50; <i>FlashCalc</i> \$99/\$15; <i>ProClock</i> \$159/\$32; Modem 1200 \$495/\$50; <i>Apple Access II</i> \$75/\$10
CBS Software (203) 622-2500	\$5 rebate on any software. Receipts dated June 15—Oct. 31, 1984.	All CBS software
Datasoft (818) 701-5161	Buy 1 game, get 1 free or get \$4 rebate; buy 2 games, get \$10 rebate; coupons in software. Oct. 1—Jan. 31, 1985 for rebates; coupons sent by Feb. 28, 1985.	Coupons with: <i>ManCopter, Bruce Lee, Heathcliff, Zaxxon, Demon Quest, Lost Tomb</i>
Electronic Arts (415) 571-7171	Buy 2 programs, send receipt and \$1.50 postage, and get 1 free. Now through Jan. 15, 1985.	All Electronic Arts software except <i>Get Organized</i>
Epyx, Inc (408) 745-0700	With \$3 and coupon get preview disk of 6 C 64 games; get \$3 rebate if buy 1 of the 6. Mid-Sept.—Mid-Dec. 1984.	<i>Silicon Warrior, Breakdance, Impossible Mission, Summer Games, PuzzlePanic, The World's Greatest Baseball Game</i>
Eric Software (209) 237-0989	Send proof of purchase from any educational software package and receive a child's digital watch (value: approx. \$19.95). Now through Dec. 31, 1984.	<i>Gabbit Factory, Learning Line, The Sweet Shoppe, Tick Tock Clock</i>
Infocom, Inc. (617) 492-1031	4-game sampler \$7.95; buy 1 get \$8 rebate; get \$6 poster for \$2. Started Sept. 1984 (no deadline set).	<i>Witness, Infidel, Planetfall, Zork I</i>
K-12 Micro Media (800) 922-0401	15%—20% savings on educational software through catalog. Month of Dec. 1984.	50 publishers including DesignWare, Learning Co., Scholastic Software, Spinnaker
Microsoft (206) 828-8080	<i>Microsoft Spell</i> free with <i>Microsoft Word</i> ; \$9.95 <i>Microsoft Word</i> sample, if buy program, you get \$9.95 rebate. Oct. 1—Dec. 31, 1984.	<i>Microsoft Word</i> and <i>Microsoft Spell</i>
Parker Brothers (617) 927-7600	\$10 rebate on Atari and C 64 games; some for IBM PC and TI-99/4A. Now through Jan. 31, 1985.	<i>Q*bert, Popeye, Star Wars: The Arcade Game, James Bond 007, Gyruus, Mr. Do's Castle, Montezuma's Revenge</i> (also PC); <i>Frogger II: Three-deep!</i>
Quality Input (309) 454-1061	Buy 2 programs, get 1 free. Nov. 1—Jan. 15, 1985.	<i>Numbers Plus Math Series</i> (6 titles in series)
Scarborough Systems (914) 332-4545	Send coupon, proof of purchase, and \$3.50 to send software to any school you choose. Sept. 15—March 15, 1985.	<i>MasterType, Songwriter, Phi Beta Filer, PatternMaker, Picture-Writer, Run for the Money</i>
Scholastic Software (212) 505-3000	\$5 software rebate: coupons in advertisements/get 6-month subscription to FAMILY COMPUTING w/some purchases. Sept. 15—Jan. 31, 1985.	Rebate on any Scholastic program/get subscription w/ <i>Frog, Story Maker, Logic Builders, Quations, Microzine</i>
Sierra Inc. (209) 683-6858	Buy 2 educational programs, get 1 free. Now through Dec. 31, 1984.	<i>Learning With Leeper, Troll's Tale, Dragon's Keep, Learning With Fuzzywomp, Wizard of Id's WizType, Wizard of Id's WizMap, StoryMaker, Gelfing Adventure</i>
Software Publishing (415) 962-8910	Buy gift pack <i>pfs: file, write, and solutions</i> and get coupons worth \$65—\$194. Thanksgiving—Christmas.	<i>pfs: file, pfs: write, and pfs: solutions</i> discounted MS-DOS (\$299) and Apple Ile/Iic (\$219) versions. W/ MS-DOS version, rebate coupons: \$5 off any Learning Co. program, \$10—\$15 off other pfs programs, \$24 off Home Banking Service from Bank of America, \$25 off POPCOM modem models C-100 and X-100. W/ Apple version, get trial disk <i>pfs: access</i> and rebate coupons: \$5 off Learning Co. products, \$5—\$15 off other pfs products, \$24 off Home Banking Service from Bank of America, \$50 off Apple 1200 modem, \$100 off Color Plotter 410
Spinnaker Software (617) 494-1200	Buy computer and game, get game free; buy 4 or 5 games, get 1 free. Oct. 1—Jan. 1, 1985.	Learning Series; Learning Discovery Series; Learning Adventure Series; Early Learning Series (free T-shirt w/proof of purchase and coupon inside package); Windham Classics (coupon good for ½ off of a children's classic book); Trillium (free posters w/ games); <i>Aerobics</i> (send for free "Spinnaker Sports Top" shirt)
Strategic Simulations (415) 964-1353	Half-price specials on software while supplies last.	<i>Cytron Masters, Queen of Hearts, S.E.U.I.S., The Shattered Alliance, Galactic Gladiators, Computer Conflict, Operation Apocalypse, Southern Command, Road to Gettysburg</i>

Picture Perfect

BY BECKY PETERSEN AND MINDY PANTIEL

Lauretta Jones, a professional computer artist, created this fish scene with Broderbund's *Dazzle Draw*.

If you've ever watched a 3-year-old pore over a coloring book, or stood by as a budding Van Gogh sketched a sunset and a shimmering lake, you know how valuable creativity and design are in a child's development. Fingerpaints, paint sets, Play-doh, and crayons—these staples of childhood creativity have been joined recently by a new tool: the personal computer.

There's a host of software available that turns your computer screen into a miraculous electronic canvas. Using the joystick or keyboard, you'll be able to draw on your screen, switch colors instantly, mix new ones, experiment with brush widths, and magnify sections of the masterpiece—all with a flick of the wrist or press of a button.

AN ART FORM ALL ITS OWN

In the past decade the world of computer graphics has become an art form all its own. Some artists

BECKY PETERSEN and MINDY PANTIEL, contributing editors of *FAMILY COMPUTING*, wrote "The Perfect Marriage" in the November *Home Business*. Petersen is a former art teacher and art curriculum coordinator.

have foregone the easel and palette entirely in favor of the computer. And whether you've noticed or not, computer graphics frequently pop up everywhere from TV commercials, to movies and business presentations.

Until recently, only a few specialists have had access to the wealth of design possibilities offered by computers teamed with fancy, high-priced software. But over the past few years, more and more personal computers are being outfitted with clever, low-cost programs. Now, families with a limited software budget can afford to experiment with this new brand of home-based creativity—an educational, entertaining, and unusual new computer application.

You'll find art software to challenge a variety of talents:

Computerized coloring books are at the most basic level. They permit young artists to fill in the lines with colors of their choice, although they offer very little in the way of artistic freedom.

Then there are the packages that provide an empty screen and the challenge to fill it using a variety of

design options and routines you couldn't easily duplicate manually. Computer artists can draw a picture in plain black and white and fill it in with color later, or "paint" with any number of different hues right from the start. Many of these packages include zoom or close-up features, which allow users to work in more detail on portions of their drawings, and the ability to alter the thickness of a brush stroke with a simple command.

A few packages combine the best of the two by offering both a drawing function and a coloring-book option. Along similar lines, some software comes with preprogrammed shapes and figures which can be put together to make pictures. Youngsters can create everything from houses to space modules by piecing various components together.

Kids often become frustrated with their inability to render on paper what they envision in their mind's eye. Near-perfect rectangles and circles are easier to imagine than they are to actually execute. The computer offers immeasurable help when it comes to realizing artistic potential.

THE HARDWARE

The graphics capabilities of the major personal computers vary considerably from machine to machine. In general, Atari and Commodore 64 owners will be able to get the greatest artistic effects through commercially available software, although there is a big supply of software for the Apple as well.

All computer graphics, including circles, strange shapes, and even text, are created by linking together small squares called pixels. Low-resolution graphics use bigger pixels to create shapes; high-resolution graphics use much smaller pixels. As a result, low-resolution designs and shapes often appear chunkier than those composed in high-resolution.

Beyond the computer itself, the video display is probably the most important component in determining the quality of the pictures you create.

A color monitor is preferable to a

THIS BOUQUET OF ART SOFTWARE TURNS YOUR COMPUTER INTO A POWERFUL ELECTRONIC CANVAS

TV set since it can accommodate graphics in a higher resolution. Obviously, color monitors are more suitable for art software than "monochrome" or single-color displays. Professional computer artists are likely to use monitors that cost upwards of \$5,000.

Another thing to keep in mind is that although you may be able to save creations to disk with many of these programs, not all will furnish you with "hard copy," or actual printouts of your work. You may have to invest extra money in any of the special accessories—the circuit cards or additional software that will let you print out this week's masterpiece for the refrigerator door.

THE ELECTRONIC PAINT BRUSH

With art software you have a variety of different "paintbrushes" to choose from. The keyboard is perhaps the most cumbersome and the least like real drawing. Arrow keys (or other specified keys) can only control the brush in four directions—horizontally and vertically. Since curved lines are virtually impossible to draw with such limited dimensional alternatives, most keyboard painters usually wind up limiting their graphic creations to straight lines and right angles.

Other devices, such as joysticks, light pens, touch tablets, and mice, reduce the frustrations and make computer drawing feel a lot more natural. In this roundup we'll concentrate on those packages that primarily use joysticks or game paddles to simulate a paintbrush. Be aware that many of the more advanced graphics packages rely on more sophisticated input devices. Light pens, touch tablets, and mice, plus their software will be discussed in a future issue of FAMILY COMPUTING.

THE SOFTWARE

The packages reviewed here are ones that we found most suitable for artists in the home setting. We considered approximately 30 packages in the process—and singled out those we believe offer something for everyone in the household, from the

Eight-year-old Christian Ceci used Reston's *Paint* to execute this high-seas scenario.

most diligent finger painters to the more serious art student. Some packages are distinguished by their ease of use. More difficult ones often offer near professional results in exchange for the greater effort required.

BLUE RIBBON CHOICES

Here are three packages for the Atari, Commodore, and Apple that stood out.

Tops in the ease-of-use department is *Paint*, on disk for the Atari. Now 2 years old, it still compares well with many new art programs. Designed originally for kids, it's ideal for artists of all ages.

You have a choice of 81 different brush patterns and brush widths—from star-shaped lines to dotted ones, from thin ones to fat ones for painting great swatches at a time. To pick up colors, move the cursor into any one of the paint pots at the bottom of the screen and press the trigger. You can draw freehand, but you can automatically generate lines, circles, and brush strokes as well. An electronic coloring book section in the program lets youngsters add touches to an existing work.

The package comes complete with the most entertaining and educational documentation we saw. It provides a splash of art history as well as suggestions to ignite the imagination. This is a special touch for anyone who's ever listened to a small child ask, "What should I draw?" *Paint* will let you save your work to disk. But you can't print it out.

Doodle, on disk for the Commodore 64, gets high marks for its array of unusual features. Using a joystick or trak ball, artists can change brush sizes and colors by pressing the appropriate function or numerical keys. Documentation takes you step by step through the process of filling sections with color and executing perfect circles and boxes.

Make a mirror image or turn your work into instant op-art, so that your creation appears to be moving on screen. This is an especially good feature for family teamwork. Parents and older siblings can work on the initial drawing while younger members take over for the touch-up phases.

"Stamp" multiple copies of any portion of your work around the screen or on other drawings you've

ART SOFTWARE

Title Price	Manufacturer Address	Hardware requirements	Input	Program type	Documentation	Hard copy	Comments
Art Gallery \$39.95	Radio Shack A division of Tandy Corp. Fort Worth, TX 76102 (817) 338-2395	TRS-80 CoCo, 4K or 16K (cartridge)	Keyboard	Drawing and coloring book	Good (template overlay for keyboard)	No	16K users have access to more operations; locating data tape coloring book pictures takes practice.
Artpak \$99	Pal Software Corp. 6100 Barrows Drive Los Angeles, CA 90084 (213) 259-9659	IBM PC/PCjr, 128K (disk)	Keyboard	Drawing and graphic design	Very good, but very complex	*	More advanced capabilities include animation and music.
Color Me \$29.95	Versa Computing, Inc. 3541 Old Conejo Road, Suite 104 Newbury Park, CA 91320 (805) 498-1956	Apple II series, 48K	Joystick or game paddles	Coloring book	Good	No	25 full-screen pictures to color; no separate drawing mode; for very young children.
The Complete Graphics System \$79.95	Penguin Software P.O. Box 311 Geneva, IL 60134 (312) 232-1984	Apple II series, 48K	Keyboard, graphics tablet, joysticks, paddle, trak ball	Drawing and graphic design	Very good, but complex	No	Very good program with advanced capabilities for more serious art students.
Computer Crayons \$34.95	Futurehouse Inc. P.O. Box 3470 Chapel Hill, NC 27514 (919) 967-0861	Atari Home Computers, 48K (disk); Commodore 64 (disk)	Edumate light pen or joystick	Drawing and coloring book	Very good	No	Easy to understand "icons" make program easy for children to use on their own.
Dazzle Draw \$49.95	Broderbund Software 17 Paul Drive San Rafael, CA 94903 (415) 479-1170	Apple IIe/IIc, 128K	Mouse, graphics tablet, joystick	Drawing and graphic design	Very good	Yes	Excellent menu-driven package has advanced capabilities for more serious uses.
Doodle \$39.95	City Software 735 Wisconsin Ave. Milwaukee, WI 53233 (800) 558-1008	Commodore 64 (disk)	Joystick or trak ball	Drawing	Excellent	Yes	Contains multitude of options that are fun and easy to use.
Drawpic \$19.95	Artworx 150 North Main St. Fairport, NY 14450 (716) 425-2833	Commodore 64 (disk); Atari Home Computers, 40K (disk)	Joystick	Drawing	Adequate (commands do not stand out from text)	No	Includes most standard drawing features; nothing unique.
Flying Colors \$39.95 (C 64) \$69.95 (Apple)	The Computer Colorworks 3030 Bridgeway Sausalito, CA 94965 (415) 331-3022	Apple II series, 48K; Commodore 64 (disk)	Joystick, paddles, touch tablet	Drawing and graphic design	Excellent	Apple only	Easy-to-follow, on-screen menus make advanced capabilities easy to use; allows you to mix text and graphics.
Fun With Art \$39.95	Epyx 1043 Kiel Court Sunnyvale, CA 94089 (408) 745-0700	Atari Home Computers, 16K (cartridge)	Joystick	Drawing	Good		Includes most standard features; menu options do not remain on screen during drawing.
Magic Crayons \$35	C & C Software 5713 Kentford Circle Wichita, KS 67220 (316) 683-6056	Apple II series, 48K	Keyboard	Drawing	Good	Yes	Good for very young children; includes "icons" for prereaders and special identifying labels for keyboard.
Micro Painter \$34.95	Datasoft 19808 Nordhoff Place Chatsworth, CA 91311 (800) 423-5916 CoCo version from Radio Shack	Apple II series, 48K; Atari Home Computers, 48K (disk); TRS-80 CoCo, 16K (cartridge)	Keyboard or joystick	Drawing and coloring book	Very good	No	Includes some standard features; difficult to load pictures with CoCo version.
Paint \$39.95	Reston Publishing Co. 11480 Sunset Hills Road Reston, VA 22090 (800) 336-0338	Atari Home Computers, 48K (disk)	Joystick	Drawing and limited coloring book	Excellent	No	Excellent easy-to-use program, for home use; menu options remain on-screen.
Paint Brush \$19.95	HesWare 150 N. Hill Drive Brisbane, CA 94005 (415) 468-4111	Commodore 64 (cartridge)	Joystick	Drawing and coloring book	Limited but adequate	No	Limited number of options; good for younger users not interested in a lot of commands.
Pic Builder \$39.95	Weekly Reader Family Software 245 Long Hill Road Middletown, CT 06457 (800) 852-5000	Apple II/II plus/IIe/III, 48K; Atari Home Computers, 48K (disk)	Keyboard or joystick	Picture- building kit	Fair (requires considerable effort)	No	Picture-building kit is a fun idea; sometimes difficult to discern different picture parts.
PictureWriter \$29.95	Scarborough Systems 25 N. Broadway Tarrytown, NY 10591 (914) 332-4545	Apple II series, 48K	Joystick	Drawing and coloring book	Good	Yes	Includes on-disk tutorial; suggested for ages 5-15 but very young children may have trouble.
Poster \$24.95	Scholastic Software 730 Broadway New York, NY 10003 (212) 505-3000	Apple II series, 48K; Commodore 64 (disk); version planned for IBM PC/ PCjr (disk)	Keyboard	Drawing	Good	No	Limited low-resolution drawing possibilities; package uses simple, fun programming language like Logo.
Sorcerer's Apprentice \$49.95	Event Horizon Corp. P.O. Box 1327 New York, NY 10028 (212) 535-0697	Commodore 64 (disk)	Keyboard or joystick	Drawing	Good	No	Has most standard features.

*Yes, in black-and-white; color printouts require additional software.

saved on disk. Type words and letters on your creation, or ZOOM into different sections to perfect parts in detail. *Doodle* has the double advantage of letting you print out your work as well as save it to disk.

For more serious art students, *Dazzle Draw*, on disk for the Apple IIc and IIe with 128K, is one of the most impressive packages available. Operations and tasks are presented in a series of menus you can pull down from the top line, using a joystick or mouse, as well as a graphics tablet. Select from one of 10 differently-shaped brushes. You have a rainbow of more than 16 colors to choose from at any one time. The zoom, cut-and-paste, and spray paint features are just a few of the options that allow you to make brilliant designs.

The spray paint feature lets you add the illusion of dimension to your work. The CAPTURE option will store a section of your work on the program's internal clipboard for later use. For extra-detailed design, artists can go one step beyond ZOOM and work with a portion of the piece pixel by pixel. And, you can print out your work—even in color (with the right kind of printer). All in all this is a terrific package, but definitely a more demanding one.

HONORABLE MENTION

Several other noteworthy programs provide a spectrum of electronic paint possibilities. *Flying Colors*, for instance, for the Apple II series, provides a full range of colors and brush widths, which you manipulate with a joystick or game paddle.

Sorcerer's Apprentice, on disk for the Commodore 64, lets you automatically execute lines, circles, rectangles, and triangles, as well as draw freehand in a combination of 16 colors.

Another program that combines drawing and coloring book features is *PictureWriter*, on disk for the Apple II series. A thorough, step-by-step on-disk tutorial supplements the written documentation. You can draw your own pictures, color in existing ones, or play and make your own games.

The Complete Graphics Package, on disk for the Apple II series, is an advanced package that deserves special attention. It lets you create three-dimensional objects on-screen and rotate them to view different sides, as well as draw lines, ellipses, arcs, boxes, and triangles.

If you wanted to design a house

for instance, you would draw each of its sides or faces separately, then assemble the pieces and rotate the image to see various different perspectives of the structure. Next, you can paint the sides with several of more than 100 colors, using up to 96 brush strokes. Magnify details and perfect the drawings point by point.

FOR THE PINT-SIZE PICASSO

With a little parental patience and instruction, younger members of the family can create computerized works of beauty, too. In general, younger children are content with just a few different options and capabilities—changing colors and brush widths, for instance. All they need are some suggestions about what to draw and they'll really take off. Most of the programs mentioned here—designed specifically for younger age groups—use easy-to-understand symbols for instructions and operation. Youngsters only need to learn a limited number of commands.

Color Me, for the Apple II series, is a computer coloring book with 25 high-resolution pictures. Though targeted for ages 3–12, it's best-suited for kids in the lower end of the spectrum. Thirty-two color pots provide the child with a nice range of choices. (Editor's Note: *Springboard Software's* new program, *Rainbow Painter*, on disk for Apple, Commodore, and IBM PCjr, \$34.95, unavailable for review at presstime, may also be worth a look.)

With *Computer Crayons*, on disk for the Commodore 64 and Atari Home Computers, kids use a joystick or an Edumate light pen to either color in preprogrammed pictures or sketch their own drawings. To select a picture to work on, the child simply presses a letter of the alphabet and a corresponding picture appears. "Z" brings up a zebra, "B" a barnyard. You also get a bit of animation with this package—select the option indicated by the little running man and a portion of the picture comes alive and moves across the screen.

For CoCo owners, *Micro Painter*, from Datasoft, is another combination coloring book and sketch pad package. A version is available for Apple II series and Atari Home Computer owners. And *Paint Brush*, on cartridge for the Commodore 64, is especially good for young users because the number of functions and operations are kept to a minimum. Users may fill in drawings, erase, and decide on brush color.

Above (from top to bottom), scenes created with *PictureWriter*, *Flying Colors*, and *The Complete Graphics System*—graphics programs that satisfy the creative urge for a variety of skill and age levels.

BEFORE YOU BUY

Nothing is more likely to cut short an aspiring computer artist's dreams than a frustrating experience with unwieldy art software. It's best to avoid programs that use the keyboard as the sole means of input. Drawing a picture by tapping one key at a time is not a recommended method for stimulating creativity. If you're using a joystick, make sure it operates smoothly. Some packages, like *PictureWriter*, demand very accurate joystick control in executing pictures.

The computer has come of age as a unique and exciting creativity tool. This selection of software will turn your machine into an instrument worthy of a place next to the old watercolor, crayons, and clay. All work wonders in satisfying and stimulating the creative urge of artists—young and old. ☐

10 TIPS TO MAKE YOU A SAVVY CONSUMER

'Tis the season to be jolly, but it's also the season for shopping. And shopping, especially for a computer, can be hard work. I've had over five years of computer experience. Along with my computer-scientist husband, I've bought more equipment than I can justify. I write about *them*, I live with five of *them*, magazines about *them* clutter my house—and still I find that buying computer equipment is hard work. Each purchase requires careful research, agonizing comparisons, and listening to dozens of "sales raps."

Recently I paid a series of visits to computer marketplaces (in the suburbs outside New York City and in small towns Upstate). I was thinly disguised as a freelance writer in search of a computer I could use for work and with my family. My kids are young, ages 4 and 2, but taking to computers fast.

Keeping a diary of my computer-shopping activities helped me spot some of the shopper's classic stumbling blocks. While the overall shopping situation has improved greatly since my last spree about two years ago—salespeople were generally courteous and well-informed—there's still room for improvement. I've condensed my diary, and present it here as a collection of tips and guidelines to help smooth your experience.

ROBIN RASKIN is a contributing editor of FAMILY COMPUTING. Her last article was "Organizing Your Household, Data-Base Style" in the October issue.

The very first store I entered was a mass-merchandise toy store. The young salesman in the computer department was busy uncrating boxes of new software. As he stocked the shelves, I told him I wanted a computer that I could use for word processing as well as for the family's education and entertainment. He paused thoughtfully, and without turning around asked, "How much?"

I thought he was asking me about my memory requirements, but it turned out he wanted to know about money. When I said I hadn't given much thought to how much I was willing to spend, he looked at me like I was from another planet. "Do you know anything about Atari, Commodore, or Coleco?" he asked (that was his longest sentence!). I replied that my parents had an Atari. With that, he suggested the Atari 800XL. He also suggested I might want to try "a real computer store;" spend more and get more.

I tried three stores up the road and the story was the same: The salesmen all wanted to know how much I was willing to spend before we even walked within striking distance of a machine. Once I mentioned a figure, they could steer me in the appropriate direction. (In one case, it was right out the front door.)

I walked into a computer franchise store to investigate a sale on a dependable, time-tested computer. I mentioned my requirements, and before I could say "64K" my vivacious salesman got me to sit down and watch a demonstration of a new, more powerful, and more expensive machine.

The demonstration was fun and I agreed that the new machine was better for me. I also believe that the Jaguar is a better car for me, but that doesn't mean I'll go out and buy one.

Super discounts, clearance sales, and special sales of any kind create consumer pressures. One local computer franchise store was conducting a phenomenal sale on the PCjr. I walked in and was left to gaze around for about five minutes, marveling at the tremendous amount of computer power

surrounding me. The place was full of Macintoshes, IBM PCs, Hewlett-Packards, etc.

My salesman methodically demonstrated some of the capabilities of the PCjr. I said I'd return with my family. Then the pitch began. "We only have a few of these left at the sale price. I wouldn't take too long to decide. They're selling faster than we can stock them."

I began to sweat in the climate-controlled display room. Another salesman backed up his colleague. "Yup, I wrote up three this morning."

Gosh! I had nonchalantly walked into the store because I was curious about the PCjr, but I was exiting with my adrenaline racing.

My advice is to set a ballpark figure for spending, then concentrate on finding a product that fits your needs.

At another hi-tech computer franchise store my salesman was obviously in love . . . with an Apple IIc. He touted its portability. Even though I told him I didn't really need portability, he stood strong. I had other questions, but they went virtually unheeded. The salesman was distracted by a new flurry of customers in business suits (better potential customers?), and I was handed the IIc's demo disk.

After 10 minutes of running the demo, I grew restless. The demo was illuminating, but, like most, obviously designed to maximize the best features of the machine. "Whaddya think?" asked the salesman. "Perfect, isn't it?"

I said I'd have to see some *real* software run on it. I said many of my friends used *WordStar*, for word processing. He said *WordStar* didn't run on the IIc, but that many other fine word processing programs did. However, the software he chose to show me was *MousePaint*, an intriguing program that allows you to draw color pictures with a mouse—but which didn't answer my needs. Again, I think he was trying to show off the machine. Or maybe he was a victim of the store's training program, and had only one spiel to give.

One selling point that attracts shoppers to specialty computer stores—as opposed to large, discount merchandisers—is service. Computer stores that are authorized dealers for particular brands usually offer contracts for service beyond the life of the warranty. However, whether or not you need elaborate service contracts is debatable.

When I ask the folks at computer stores what they think of service contracts, they always respond by telling me how often things break or how disk drives routinely wear down. When I put the same question to mass merchandisers, they say that computers seldom break down. "Computers aren't mechanical, they're electronic," one apparently knowledgeable retailer told me. "If computers break they do so in the very beginning, while still under warranty."

Who do you believe? I used my computer constantly for three years before something failed. When it did, I found plenty of third-party service centers willing to clean and align the head on my aged drive. The repair cost \$60 and took one week. Since I had another computer at home, the repair didn't inconvenience me. And a service contract for all those years would have been significantly more expensive.

My advice: Let your pocketbook and conscience be your guide. Although I generally don't take out service contracts, it comforts me to buy from stores that offer service. I figure I can always buy it when I need it.

It took me a week of steady shopping to realize many of my price quotes weren't truly accurate. I learned this during a visit to the Sears Business Systems Center, where the saleswoman quoted me a price on the IBM PC. She carefully listed all the components needed for a working system: the DOS (disk operating system), the printer inter-

Source: Link Resources Note: Figures do not add to 100 due to rounding

face, the color graphics adapter, etc. "Oh, no!" I exclaimed. "No one else mentioned those expenses." The total came to around \$2,500; all I'd heard before was that the computer cost \$1,400.

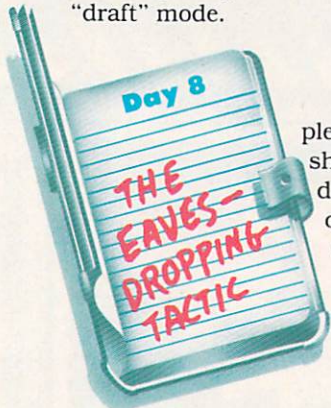

When you get a price quote, make sure you've got the whole story. That often means knowing what you need, which is a good habit to cultivate. If you buy a monitor, for instance, or a printer, you're also going to need a cable. Get the salesperson to itemize each component on paper before you make your decision. Otherwise, you're in for a rude shock at the cash register.

Some salespeople are enamored of the very "latest" in everything. No matter what you tell them about your needs, they lead you to the newest thing in the store. One salesman was raving to me about the Macintosh, even though I had made it clear that it was well out of my price range. Moreover, at that time there was not much software available for the Macintosh.

Close cousins of such salespeople are those who specialize in "technobabble." They figure they can wow you into buying by giving you long lists of technical specs—such as "256K, double-sided drives, hi-res display, touch-sensitive screen," etc.

I've learned to respond to both sales types by asking human questions. I ask how many pages of text a given computer and given word-processing program can hold at one time, how many addresses a data-base package can hold, how fast a printer can print in its "correspondence-quality" mode—not just its fastest "draft" mode.

You know all salespeople develop tactics; if you shop long enough you'll develop some of your own. From now on I intend to hang around a store until I get some indication that the salespeople support their repeat customers as well as customers who want to make small purchases of software or computer books.

I observed one shopper, who had recently bought a printer, return to the same store to buy a cable. (Apparently he hadn't been told he'd need one!) The store didn't carry the brand of computer he owned, and no one there could tell him what kind of cable he needed to match his computer. He was told to go home,

look it up in his manual, and return.

You'd think they could have spared a repeat customer (especially one who'd bought a \$400 printer) the inconvenience of a trip home by placing a call to the manufacturer. On the other hand, I was gratified to see the store didn't sell the guy the wrong cable by taking an "educated guess."

I had to return to one franchise store two times before I could corner a salesperson. At my local camera/computer discount store I had to yell questions to an overburdened salesman—he looked like he was surrounded by reporters at a presidential press conference. I had to return to a hi-fi store on the day when a certain "computer expert" would be working. You think I've got this kind of time?

The first two inconveniences could have been avoided had I shopped during "off-peak" hours. Avoid, if at all possible, shopping on weekends or during lunch hour, unless you know what you want and don't need help. If you're shopping at a computer specialty store, you can avoid return trips by calling ahead and finding out which salesperson is best suited for your particular needs, and when you should visit.

In some stores you can't be a questioning consumer. At a big "video warehouse" I visited, Coleco ADAMS and Commodore 64s were selling for fantastic prices. The music was blaring and the salespeople were dancing too hard to listen to questions. The store's approach was: "What you see is what you take home."

In many stores, however, you can question the salespeople. I've learned to blast away with questions without inhibition. I never walk into a store empty-handed. I bring a list of questions, and pencil and paper to take notes.

I try, as much as possible, to read up on my subject—both the store and the product—before I walk in the door. It's not fair to walk in and fall helplessly into the arms of a salesperson. It's more productive to say, "I've heard there isn't much software available for this machine," and let the salespeople take it from there.

You go to school to learn, and to stores to buy. The salesperson's job is to make a sale, not to educate. 

BUYER'S GUIDE TO COMPUTER SYSTEMS

HOW TO BUILD A SYSTEM IN THREE STAGES

This Buyer's Guide is the work of several people. Charles Gajeway, a contributing editor to FAMILY COMPUTING, and long-time Apple and IBM expert, wrote the introduction and compiled Apple and IBM systems.

Louis Wallace, who has written several Buyer's Guides and product reviews for FAMILY COMPUTING, and who is a former president of the Gainesville, Florida, Commodore Users' Group, was charged with listing Commodore and Atari components.

Lance Paavola, FAMILY COMPUTING's technical director and author of the "Tandy 1000 Preview" in this issue, took on the challenge of tracking down the best equipment for the TRS-80 Color Computer. He was aided by comments from Sandy Trevor and Richard Gregory, CoCo fans found on CompuServe.

In some ways, choosing a computer system is like shopping for a stereo. Some manufacturers offer prepackaged systems that include all the major operating parts. Others sell the keyboard and CPU alone, and leave the task of assembling a working system—with a cassette or disk drive, a TV or monitor, a printer—to you.

Of all the major computers designed specifically for home use, only Coleco's ADAM is a complete system; all the rest require at least some decisions on the part of the buyer as to what auxiliary equipment he or she requires. Apple and IBM computers are often sold as systems, but can be expanded far beyond the "starter" stage to meet growing needs.

Among business-oriented computers, many of which are now being used in the home, the Compaq, Epson QX-10, Kaypro 2X and 4, Apple Macintosh, Sanyo MBC 550, TRS-80 Model 4, and the Panasonic Sr. Partner (see chart) are often sold as complete systems.

Whether you're buying a computer primarily for business, education, or entertainment use, we feel the basic hardware needs are very similar, as are the basic patterns of growth and expansion. Obviously, if you're a musician or an artist, you'll expand somewhat differently than an accountant, parent, or a writer. But the basic path will be the same.

What makes a piece of hardware

good is that elusive balance between usefulness, reliability, and price—i.e. the value factor. Adaptability and expandability are also key product attributes. It is downright wasteful to have to discard a piece of a system when upgrading it or expanding its capabilities. Choosing versatile equipment at the start is a key factor to the long-term enjoyment and usefulness of a home system.

Described below are three general types of systems—called "Entry," "Working," and "Dream." Whatever your primary application, the progression from one system to the next should follow the same logical pattern shown here.

ENTRY SYSTEM

An Entry system includes enough to get started. That means a keyboard and system unit (CPU), a display device (TV or monitor), a storage unit (cassette recorder or disk drive), and usually game controls (joysticks or trak balls). If you can afford it, a printer should also be included.

While purchase of the printer can be deferred for a while, not being able to produce hard-copy output seriously reduces the usefulness of any computer. If you're going to use your computer for business, start out with a low-cost letter-quality printer (\$350-\$500). You can add a more versatile dot-matrix printer later. If speed or the ability to print out graphics displays is a must, then you'll need a dot-matrix printer.

In general, low-cost letter-quality (daisywheel) printers are a better val-

ue than low-cost dot-matrix printers (\$150-\$250).

WORKING SYSTEM

The intermediate Working system expands the user's horizons with additional storage (either the first or second disk drive), a modem, and extra memory (if available). And, for those who couldn't afford it at first, a printer. This type of system will satisfy most users' needs.

Some of the items we've included in the Dream category—like a graphics tablet or a voice synthesizer—could be substituted to customize a system for a particular family's needs.

DREAM SYSTEM

The Dream system is the practical maximum—everything that will fit and offer the user a reasonable degree of functionality, particularly for business or professional use. Such a system includes items such as a high-resolution RGB (Red-Green-Blue) color monitor (where possible); a large capacity hard disk for fast, convenient data storage; a wide-carriage dot-matrix printer that will produce text and graphics on most sizes of paper; maximum RAM; a plotter to produce quality color graphics; a graphics tablet for computer drawing; and other niceties. This system offers the ultimate in convenience, speed, and flexibility.

APPLE AND IBM

In general, Apple and IBM computers are more powerful and easily expanded than lower-priced systems. For that reason, my equipment choices for these two systems are more advanced and specialized.

For the most part, using a color TV with Apple or IBM systems is unacceptable, since an 80-column display

1. ENTRY SYSTEM. Besides the keyboard and CPU (sometimes one unit), the Entry system should include either a TV or a monitor, and either a cassette recorder or a disk drive. A printer is recommended, but optional.

15 COMPUTERS FOR

Computer	Price	RAM: Minimum/ Maximum	Bundled Software	Bundled Hardware	Monitor, TV, or Both	Interfaces/Cartridge
ADAM	\$750	80K	SmartBasic, SmartWriter, Buck Rogers Planet of Zoom	Digital data drive, printer, two joysticks	Both	Nonstandard parallel; cartridge
Apple IIc	\$1,195	128K	BASIC, ProDOS, tutorials	Disk drive	Both	2 RS-232C serial ports
Apple IIe	\$995	64K/128K	BASIC, ProDOS	Monitor, disk drive	Both	Optional; 7 expansion slots
Atari 800XL	\$199	64K	BASIC	None	Both	Nonstandard serial; cartridge
Commodore 64	\$199	64K	BASIC	None	Both	Nonstandard serial; cartridge
Commodore Plus/4	\$299	64K	Word processor, data base, spreadsheet, graphics, BASIC	None	Both	RS-232C; cartridge; nonstandard parallel user port
Compaq Portable	\$2,495	128K/640K	DOS 1.0, BASIC	Disk drive, monitor	Both	Centronics parallel
Epson QX-10	\$2,495	256K	Valdocs (with word processing)	2 disk drives, monitor, RX-80 printer	Monitor	Centronics parallel and RS-232C; 5 option slots
IBM PC	\$1,999	256K/640K	PC-DOS 2.0, BASIC	Disk drive	Both	Optional; 5 expansion slots
IBM PCjr	\$999	128K/512K	PC-DOS 2.1, BASIC	Disk drive	Both	RS-232C serial; parallel is optional; cartridge
Kaypro 2X	\$1,599	64K	BASIC, Star series, CPM	2 disk drives, monitor	Monitor	Parallel, 2 RS-232C serial
Macintosh	\$2,195	128K/512K	MacWrite, MacPaint	Disk drive, monitor, mouse	Monitor	2 serial, mouse, speaker, and disk drive ports
Panasonic Sr. Partner	\$2,145	256K/512K	MS-DOS 2.11; VisiCalc; pfs: report, file, and graph, WordStar	Disk drive, thermal printer	Monitor	Parallel and serial
Sanyo 550-2	\$999	128K/256K	MS-DOS 2.11, WordStar, CalcStar, EasyWriter I, BASIC	Disk drive	Monitor	Centronics parallel; RS-232C serial opt.
Extended TRS-80 Color Computer 2	\$159	16K/64K	Extended Color BASIC	None	TV	RS-232C serial; cartridge
TRS-80 Model 4	\$1,099	64K/128K	BASIC, TRSDOS 6.0	Disk drive, monitor	Monitor	Centronics parallel; RS-232C serial optional

FOOTNOTES: 1 Plus/4 and Epson QX-10 allow horizontal scrolling. 2 Atari 800XL and Commodore Plus/4 have 16 colors, with 16 and 8 luminances, respectively.

(best for word processing) is beyond the resolution of any TV. The only practical solution is to use a monochrome display for 80-column work, and a TV when color is needed (for games and educational programs). Or, you can put up the extra money for an RGB monitor—which does both well—right at the start. I've included an RGB in the Dream system.

Since Apples and IBMs are often used for business applications, and are frequently sold with a disk drive, tape recorders are not an option.

APPLE IIe

Entry System

COMPUTER: Apple IIe 64K "Starter System" (\$995)

Includes:

STORAGE: Apple Disk II with controller card (Apple DuoDisk dual drive is extra)

Not Included:

DISPLAY: Apple Monitor II (\$229)
 PRINTER: Silver-Reed EXP 400 (\$399), or Epson RX-80 (\$399), or Okidata Microline 82A (\$499), or Star Micronics Gemini 10 (\$399)
 INTERFACE: Orange Micro Grappler+ parallel printer interface (\$145)

The Apple IIe Starter System is a superb way to enter computing. The Silver-Reed is a good (but slow) performer that uses standard daisy wheels and ribbons. The Orange Micro Grappler+ printer interface only

makes sense if you're adding a parallel dot-matrix printer, such as an Epson. If you are, this interface allows you to print out all Apple graphics with virtually any major brand.

Working System

Add to the above:

STORAGE: Apple Disk II (\$429), unless DuoDisk purchased with Starter system

MODEM: Hayes Micromodem IIe (\$329); or Apple Super Serial card (\$125) and Hayes Smartmodem 1200 (\$699)

INTERFACE: Taxan 410-64K memory add-on 80-column card (\$250)

OTHER: Kensington Microware System Saver fan (\$89)

Resist the temptation to buy a non-Apple disk drive, even though many third-party drives store much more data. Apple drives are extremely reliable and well serviced. The Kensington fan cools the system, and also provides outlets for a printer and monitor, as well as a front-mounted power switch. The Taxan interface card is preferable to others (all expand memory to 128K and give 80-column displays) because the Taxan allows for RGB output. The Hayes Micromodem IIe (300 baud) is an internal modem (which means that you won't need a serial card), but the Hayes 1200-baud Smartmodem is four times faster and can save money. Hayes modems are industry stan-

dards, and will work well with virtually any communications program.

Dream System

Add to the above:

STORAGE: Great Lakes Superior 10 megabyte hard disk drive (\$1,495)

PRINTERS: Okidata Microline 84 dot-matrix printer (\$1,099), or Star Micronics Gemini 15X (\$549), and/or Hewlett-Packard 7470 plotter (\$1,095)

DISPLAY: Taxan 415 High Resolution RGB monitor (\$540)

INPUT DEVICES: KoalaPad touch tablet (\$125), Apple Mouse (\$99)

I use the Great Lakes hard disk drive on my IBM PC, and find it a reliable mass storage unit at a most attractive price. The Okidata 84 is the best all-around printer on the market today, in my opinion. The Taxan monitor is the finest Apple display I have seen to date.

APPLE IIc

Entry System

COMPUTER: Apple IIc (\$1,195)

DISPLAYS: Apple Monitor IIc with stand (\$239); or TV

PRINTER: Apple Scribe printer (\$299) or ImageWriter (\$595)

Unlike the IIe, which is an extremely flexible system, the IIc is fairly straightforward. The disk drive is built in. Apple's own components

HOME USE

Disk Drive Storage	No. of Keys	Function Keys	Text Display	No. of Colors	Sprites	Voices/Octaves	Maximum Resolution
256K	75	6 Smart Keys	36 × 24	16	32	3/5	256 × 192
143K	63	2	80 × 24	16	None	1 ³	560 × 192
140K	63	2	40 × 24	16	None	1 ³	280 × 192
180K	65	4	40 × 24	256 ²	4	4/3.5	320 × 192
170K	66	8	40 × 25	16	8	3/9	320 × 200
170K	67	8	40 × 24 ¹	121 ²	None	2/4	320 × 200
320K	83	10	80 × 25	16	None	1 ³	720 × 300
376K	105	18	80 × 24 ¹	2	None	1 ³	640 × 400
360K	83	10	80 × 25	16	None	1 ³	640 × 200
360K	62	10	80 × 25	16	None	3/7	640 × 200
195K	72	18	80 × 25	2	None	None	100 × 160
400K	58	1	varies	2	None	4/12	512 × 342
360K	83	10	80 × 25	16	None	None	640 × 200
360K	84	5	80 × 25	8	None	1 ³	240 × 200
156K	53	None	32 × 16 ¹	8	None	1 ³	256 × 192
184K	70	3	80 × 24	2	None	1 ³	256 × 192

1 One-voice computers can be programmed to output varying numbers of tones. 2 No lowercase characters.

match its design and work well. The Scribe is a reasonably priced color printer; if you don't want color output, then a low-cost letter quality or a medium-priced dot-matrix—such as the ImageWriter—would be better. But you have fewer choices here than on the Ile, since the Ile has a serial printer interface.

Working System

Add to the above:

STORAGE: Disk IIc (\$329)

MODEMS: Apple Modem 300 (\$225) or 1200 (\$495)

INPUT DEVICE: Apple Mouse (\$99)

If you can afford it, go with a 1200-baud modem. Since the serial interface is included (it's not on the Ile), you can put that saved money into a more powerful modem.

Dream System

Add to the above:

DISPLAY: Apple Color 100 monitor (\$599)

INPUT DEVICE: KoalaPad touch tablet (\$125)

PRINTER: NEC 3500 Spinwriter serial printer (\$1,795), or Riteman L.Q. (\$299)

The NEC is a very versatile printer, if you need letter-quality text and/or wide (203-character) printouts. The Riteman L.Q. is a light letter-quality printer for people on the move.

IBM PC

Entry System

COMPUTER: IBM PC, 256K, one 360K disk drive (\$1,795)

DISPLAY: NEC JB-1270MA monochrome monitor (\$249)

PRINTER: Silver-Reed EXP-400 daisy-wheel printer (\$299)

IBM PCjr

Entry System

COMPUTER: IBM extended PCjr, 128K, one 360K disk drive (\$999)

2. WORKING SYSTEM. If you didn't have a printer in the Entry System, add one now. Switch from cassette to disk drive. If you initially bought a disk drive, you might add another. Add a modem for telecommunications.

DISPLAYS: NEC JB-1270MA monochrome monitor (\$249); or TV
PRINTER: Silver-Reed EXP 400 daisy-wheel printer (\$399)

It doesn't make sense to buy a color monitor for the PCjr. Use a color TV until you can afford an RGB monitor, which makes the PCjr look great.

Working System

Add to the above:

MODEM: IBM PCjr internal 300-baud modem (\$199)
MEMORY EXPANSION: Tecmar jrCaptain multifunction expansion 128K (\$395)

While you can use IBM's memory expansion units (they attach to the side of the unit), the Tecmar jrCaptain mates perfectly with the system unit, and provides expanded memory (to 256K), a clock, and a printer connection (parallel).

Since the IBM modem is internal, the serial port is left free for a printer.

Dream System

Add to the above:

DISPLAY: IBM PCjr Color Display (\$429)
PRINTERS: Okidata 84 dot-matrix printer (\$1,099), or Star Micronics Gemini 15X (\$549)
MODEM: Hayes Smartmodem 1200 (\$699)
MEMORY EXPANSION: Tecmar jrCadet memory expansion, 64K to 384K (\$195-\$595)

The IBM PCjr Color Display, a superb RGB monitor, performs nearly as well as the pricier IBM PC Color Display. And, it's the only monitor we know of that can sit atop the PCjr. Others interfere with the operation of the unit. If you decide to use the Hayes Smartmodem 1200, you'll connect it to the serial port, meaning you'll have to use a parallel printer.

—CHARLES GAJEWAY

ATARI 800XL

The first thing to know about the 800XL—long revered as a computer with great sound and graphics—is that its future is uncertain. Atari's new owner and President, ex-Commodore chief Jack Tramiel, has indicated that the 800XL will probably not be available much beyond Christmas. But, since the 800 line has been around for several years, there's plenty of software and peripherals to support it. Plan on getting equipment fairly quickly, while dealers still carry it. The prices should be heavily discounted.

In addition, because the 800XL has a 40-column display only, there's no

point in getting a monochrome monitor. A TV or color monitor will suffice for all Atari software. Finally, the Atari has a nonstandard interface; to connect most printers and modems, except some made expressly for Atari, you'll need a special interface.

Entry System

COMPUTER: Atari 800XL (\$199)
STORAGE: Cassette: Atari Program Recorder (\$50); or Disk Drives: Atari 1050 (\$299), or Indus GT (\$485), or Rana 1000 (\$449), or Trak AT-D2 (\$499)
DISPLAYS: Amdek Color 300 (\$349) or Commodore 1702 (\$300) monitors; or color TV

The Atari 1050 is not the world's greatest disk drive, but it works, and the price may be right. The Trak drive has a parallel-printer port built into the back, which is a major advantage, and it stores considerably more than the Atari 1050.

Both the Commodore 1702 and Amdek color monitors are very good composite color monitors, and will give better performance than a TV. If you're going to start out with a cassette recorder, you must use the Atari Program Recorder.

Working System

Add to the above:

STORAGE: Disk drive (add to cassette system)
PRINTERS: Inforunner Riteman Plus (\$399), or Star Micronics Gemini 10X (\$399), or Okimate 10 (\$169)
MODEM: Microbits Peripheral 1000c (\$149), or Anchor Automation's Volksmodem (\$79)
INTERFACES: Atari 850 Interface (\$50) or Digital Devices' Ape Face (\$79)

If you started your system with a cassette recorder, you should add a disk drive now. Otherwise, adding a printer should be your top priority. The Gemini 10X printer is a good quality dot-matrix printer. The Atari 850 interface, or Digital Devices Ape Face, will be needed to connect some peripherals.

The Axiom printer comes with a direct-connect cable for the Atari. The Okimate 10 is a remarkable color-graphics printer that also prints text, and is sold with an interface/cable (\$69) for the Atari (or Commodore). The Microbits Peripheral modem plugs into the joystick port and comes with a communications program. There's an Atari cable for the Volksmodem.

Dream System

PRINTERS: Silver-Reed EXP-400 (\$399), or Smith-Corona Fastext-80

(\$259), or AlphaPro (\$399)
MODEM: Anchor Automation Mark XII 300/1200-baud modem (\$399)
INPUT DEVICE: Atari Touch Tablet (\$110)

If you want to add a letter-quality printer to your arsenal, consider the Silver-Reed 400, or Alphacom's AlphaPro. Smith-Corona's Fastext-80 is a reasonably priced dot-matrix.

The Atari Touch Tablet is a superb drawing tool. Since the Atari has 256 possible colors, you can create some fascinating graphics with it. The Anchor Mark XII is Hayes-compatible.

COMMODORE 64

The Commodore 64 is known for its great sound and large software base. When thinking in terms of a system, however, it has one limitation: nonstandard interfaces. Thus, when you are connecting peripherals not made by Commodore, you'll need a special interface. On the other hand, a feature that makes adding peripherals easy is the "expansion slot" in the back of the C 64.

Be sure to keep compatibility in mind. For instance, if you plan on getting an 80-column cartridge and an IEEE interface for faster disk drive access, you can't count on all of them to work together. And not all printer interfaces will allow you to print out all the Commodore graphics.

Entry Level

COMPUTER: Commodore 64 (\$199)
STORAGE: Cassette: 1530 Datassette Recorder (\$70); or Disk Drive: 1541 Disk Drive (\$260)
DISPLAYS: Commodore 1702 (\$300) monitor; or TV

Working System

STORAGE: MSD Systems dual disk drive (\$699)
PRINTERS: Axiom GP 550 CD (\$319), or Mannesman-Tally Spirit 80 (\$399), or Okimate 10 (\$169)
MODEMS: C1600 (\$49) or Anchor Automation's Volksmodem (\$79)
INTERFACE: Batteries Included Buscard II (\$199) and Cardco Card?/+G printer interface (\$89)
INPUT DEVICE: KoalaPad touch tablet (\$110)

If you didn't buy a disk drive at first, the MSD dual drive is a possibility. It's the most compatible and reliable of third-party drives for the C 64. However, it's expensive, and requires additional equipment since it uses the IEEE interface. It should only be considered if you're using the computer to help run a small business. The Buscard II is the choice IEEE interface.

The Mannesman-Tally Spirit 80 dot-matrix printer has a good "near letter-quality" text, and can also handle graphics for charts and pictures. Since it's an Epson-compatible printer, many software packages work with it. The Cardco interface (an interface is needed for any non-Commodore printer) allows all the Commodore characters to be printed. The C1600 VICModem (300 baud) is a very good, inexpensive modem that plugs right into the C 64. Anchor Automation's Volksmodem is somewhat more sophisticated—and equally easy to use.

Dream System

Add to the above:

- DISPLAY: Monochrome Monitor
- PRINTER: Silver-Reed EXP-400 (\$399)
- MODEM: Hayes Smartmodem 1200 (\$699) and VIC 1011A RS-232C interface (\$50)
- INTERFACE: Batteries Included 80-column adapter (\$199)
- OTHER: Tech-Sketch LP-10 light pen (\$39; \$119 w/software) and/or Currah's The Voice Messenger

For the dream system, an 80-column card from Batteries Included has been added, since it will work with the Buscard II IEEE interface. (Note: Many Commodore word-processing programs will not take advantage of 80-column displays; Batteries Included PaperClip does.) If you do add the 80-column display, you'll need a monochrome monitor for a clear display. Currah's Voice Messenger is a superb speech synthesizer, and is relatively easy to program.

—LOUIS WALLACE

TRS-80 COLOR COMPUTER

The CoCo, as the Color Computer is known, is designed to be used with a color TV. Special third-party interfaces are required to make it work with a monitor. And, if it's used with a black-and-white TV, the benefit of many of its features is lost.

Text display (only 32 characters-

per-line and 16 lines) is not the CoCo's strong suit. Without a third-party hardware add-on, lowercase letters appear as inverse capitals. Despite these limitations, the CoCo can be revved up to be a powerful system.

Entry System

- COMPUTER: 16K Extended TRS-80 Color Computer (\$159)
- DISPLAY: Color TV
- STORAGE: CCR-81 Cassette (\$59)

We chose the CCR-81 over the new CCR-82 because it does not require an AC adapter; unless you plan to travel with your CoCo, you'll want the security of knowing that low batteries aren't interfering with clear recording. (You can also use your own cassette tape recorder.) The Extended model is highly recommended over the Standard Color Computer (\$119). It's much easier to program and allows you to connect a disk drive without an upgrade.

Working System

- MEMORY EXPANSION: 16K version to 64K (\$69)
- STORAGE: Color Disk #1 Kit (\$349)
- PRINTERS: DMP-105 Dot-Matrix Printer (\$199) or CGP-115 Compact Color Graphics Printer (\$199)
- MODEMS: Deluxe RS-232 Program Pak (\$79) and Direct-Connect Modem I (\$99) or Auto-Answer, Auto-Dial Direct Connect Modem II (\$199) and Multi-Pak Interface (\$179)
- INPUT DEVICE: TRS-80 Touch Pad (\$59)

The CGP color graphics printer prints text, charts, or "doodles" using four colored pens (on 4½-inch roll paper). A modem or a serial printer can be connected directly to the CoCo without the need for an additional interface. The RS-232 Program Pak allows you to connect both at once by giving you access to an additional serial port via the cartridge

slot. The Multi-Pak Interface allows the RS-232 Pak and the disk drive both to be connected permanently to the CoCo; however, only one can be used at a time.

Dream System

- DISPLAY: High-resolution Video Monitor and Word-Pak II (\$149), or Green Mountain Micro LowerKit III (\$129)
- STORAGE: Color Disk #2 (\$279)
- PRINTERS: CGP-220 Color Graphics Printer (\$699) or DWP-210 Daisy-Wheel Printer (\$599)
- MODEM: Radio Shack DC212 300/1200-Baud Modem (\$399)
- OTHER: Sound/Speech Cartridge (\$99), and/or RS-232C Selector Switch (\$149), and/or PBJ's PC-Pak Parallel Port and Clock (\$132)

The selector switch allows up to three different printers/modems/plotters to be connected permanently to the same serial port. LowerKit gives the CoCo lowercase capability. Word-Pak gives an 80-column display plus lowercase. (To use this you'll need a monitor, since TVs don't display 80 columns of text clearly.) LowerKit gives "full-time" lowercase, whereas Word-Pak lowercase has to be supported by software. The PC-Pak allows future use of high-quality parallel printers and gives you the current date and time.

—LANCE PAAVOLA

MANUFACTURERS

Space does not permit a listing of manufacturers' addresses here. Authorized computer dealers should have product information for major brands. Many smaller companies that rely on mail order may be found in the pages of Computer Shopper (P.O. Box F, Titusville, FL 32781; [305] 269-3211). The Electronic Industries Assoc. has listings of major computer manufacturers (EIA, 2001 Eye St., NW, Washington, DC 20006; [202] 457-4919).

For more product information, refer to past FAMILY COMPUTING Buyer's Guides: Computers (June 1984), Portable Computers (July 1984), Speech Synthesizers (August 1984), Disk Drives (September 1984), Low-Cost Printers (October 1984), Monitors (November 1984). ☐

3. DREAM SYSTEM. The sky's the limit here—a music and/or speech synthesizer, touch (graphics) tablet, light pen, second printer (maybe color), RGB monitor, and mouse are all fair game. These and other add-ons will make the computer easier and more fun to use, and help expand your potential.

TANDY 1000

BY LANCE PAAVOLA

A LIVELY IBM PC-COMPATIBLE AT A REASONABLE PRICE

The Tandy 1000: compatible with IBM's PC, plus some attractive surprises—and only \$1,199 (monitor excluded).

This is a preview of the Tandy 1000, based on a brief look in August at a preproduction model and on conversations with marketing and technical staff at Tandy headquarters.

Tandy Corp. was a leather goods company for 44 years before it bought Radio Shack's nine stores in 1963. Twenty-one years later, Tandy has built Radio Shack into the world's largest electronics retailer, with nearly 9,000 stores.

In 1977, with the introduction of the TRS-80 Model I, Tandy/Radio Shack also became the world's larg-

Lance Paavola is FAMILY COMPUTING'S Technical Director.

est manufacturer and retailer of microcomputers. Soon, more Model I's had been sold than all other micros combined. But, as the idea of personal computers caught on and other companies rushed in to produce and sell them, Tandy slowly lost its lead. At the same time, it diversified its product line to cover all sections of the growing market for microcomputers, from hand-held pocket computers to portables, and home machines to heavy-duty business computers.

THE NEW "TANDY" COMPUTERS

The introduction of the Tandy 2000 last December marked the be-

ginning of yet another major change for Radio Shack. The Tandy 2000 forsook Radio Shack's own TRSDOS disk-operating system (a program that allows the computer to work with disk drives) in favor of the de facto standard for business micros, Microsoft's MS-DOS, originally designed for the IBM PC. It discarded the traditional gray, industrial design of earlier TRS-80 computers for a sleeker, white look. And, partly to emphasize these changes and partly to try to escape the "techie" image of Radio Shack stores, Tandy introduced, for the first time, a commercial computer product that was simply labeled "Tandy" instead of "TRS-80."

The second entry in the Tandy line, the Tandy 1000, is also an "IBM compatible." According to Tandy's Director of Market Planning, Ed Juge, the new Tandy 1000 will run "99.9 percent" of all software that runs on both the IBM PC and PCjr. Future Computing, a market research firm that tracks the computer industry, rates the 1000 "operationally compatible" with the IBM PC, the firm's highest rating.

What's more, the 1000 reflects some of what Tandy's learned from the success of its briefcase-size TRS-80 Model 100 computer. A multipurpose software package called *Tandy DeskMate*, "bundled" at no extra charge with every Tandy 1000, contains sophisticated versions of the text processing, scheduling, and telecommunication programs that come built into the Model 100—plus spreadsheet and data-base programs.

WHAT YOU GET

In addition to the *DeskMate* disk, the Tandy 1000 (\$1,199) also comes with 128K RAM; a 360K double-sided disk drive; the MS-DOS disk operating system; GW BASIC; and connections for: a parallel printer, a TV (which requires an RF modulator, \$24.95), monochrome or color monitor, and a high-resolution RGB (Red-Green-Blue) monitor. All of these features, except the disk drive, cost extra on the IBM PC or PCjr.

The detached, typewriter-style keyboard has an impressive 90 keys; it's

the same one that's used on the 1000's big brother, the \$2,750 Tandy 2000 business computer. And there's room for a second disk drive inside the main unit.

The tidy Tandy 1000 will take up just a corner of an office desk and perform well with business software like *Lotus 1-2-3*, yet it's comfortable in the home as well. With the same six graphics modes and three-voice sound (through a built-in speaker) as the PCjr, plus built-in light-pen interface, and two joystick interfaces, the 1000 can run all sorts of game and educational software. This even includes Microsoft's *Flight Simulator*, which does not run on many so-called "IBM-compatibles."

WHO WILL BUY IT?

Most people aren't going to pay over \$1,000 for a computer just to play games, however. Tandy expects its newest computer will be used primarily by professionals or small businesses. The company emphasizes that people with an IBM PC at the office can take their work home and complete it on their Tandy 1000, whereas a lot of IBM PC software will not run on the PCjr (normally because of disk-drive requirements).

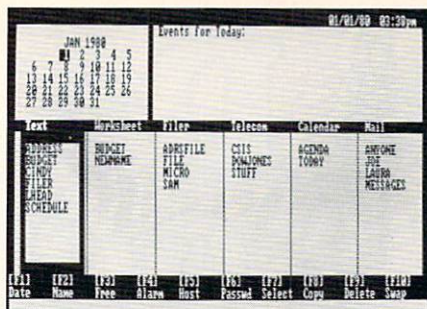

Tandy's Juge feels that the potential market for computers priced around \$1,000, currently dominated by Apple and IBM, is a large one, and still more or less untapped. He hopes that people who didn't buy an IBM PC because of cost considerations, whose needs weren't met by the PCjr, and who weren't impressed by Apple's IIc will see the Tandy 1000 as providing premium performance for a low price.

SOFTWARE

By year-end, there should be a fair amount of software for the Tandy 1000 available in Radio Shack stores under the Radio Shack label, such as educational programs from the likes of Spinnaker and Sierra; popular games from Electronic Arts, Infocom, Sierra, and others; and *Multiplan*, *Friday!*, *Lotus 1-2-3*, and other business packages.

While the data-base and spreadsheet programs included in *DeskMate* are adequate for typical home uses, no word-processing program is included. The *DeskMate* text-processing program does not include formatting features common to word-processing programs. Therefore, it will probably not be flexible enough for home users who plan to use their computer frequently to write school reports, letters, or memos.

The line of in-store software for the 1000 may not expand much beyond

The opening screen of Tandy *DeskMate*, an integrated software package included with every Tandy 1000. *DeskMate* lets you do some serious computing as soon as the computer's out of the box.

40 or 50 titles, since Tandy wants to make sure its Radio Shack salespeople can demonstrate and support every title they sell. However, you can go into a Radio Shack Computer Center and order third-party software for Tandy and TRS-80 computers through the Express Order Software program.

COMPATIBILITY

Of course, you needn't buy your software in Radio Shack stores. Almost any program written for the IBM PC, and many for the PCjr, will run on the Tandy 1000. When a Radio Shack version of an IBM PC program is released, normally the only change is a rewriting of the documentation to reflect keyboard differences. Some of the Tandy 1000's 90 keys, versus 83 on the IBM PC and 62 on the PCjr, are named differently than their IBM counterparts.

Although the colors may be different, much PCjr disk software should also run on the Tandy 1000—at twice the speed! (The 1000, unlike the PCjr, has no cartridge slots, however.)

IBM compatibility has come at the price of compatibility with the Tandy 2000, which uses a high-density format on its disks (720K per disk) and has higher resolution graphics than the 1000 or the IBMs. And because the insides (microprocessors and operating systems) of Radio Shack's own Model 4 and Color Computer are completely different from the Tandy 1000's, programs written for them will not run on the 1000 either.

TANDY 1000 FACTS

MEMORY: 128K RAM, expandable to 640K
 VIDEO DISPLAY: TV or monitor (monochrome, composite color, or RGB)
 TEXT DISPLAY: 80 char. × 25 lines
 GRAPHICS: 6 graphics modes; resolution up to 640 × 200; up to 16 colors (8 on-screen at once)
 SOUND: 3 voices
 KEYBOARD: Typewriter-style, 90 keys
 SUGGESTED RETAIL PRICE: \$1,199

PERIPHERALS AND EXPANSION

Being introduced with the Tandy 1000 are an auto-answer, auto-dial internal modem board (\$179.95); an RS-232C card for use with serial printers and external modems (\$99.95); a second disk drive (\$299.95 plus installation); a 128K memory expansion board (\$299.95); and two new monitors: a 12-inch green-screen (\$159.95) and a 13-inch RGB (\$549.95).

In addition, the Tandy 1000 will work with any existing Radio Shack printer or modem. The TRS-80 Touch Pad, made by Koala Technologies, also works with the 1000. And nearly any IBM PC card (circuit board) measuring 10 inches or less can plug right into one of the 1000's three internal expansion slots.

FIRST IMPRESSIONS

The Tandy 1000 is an attractive and versatile machine. It is also a serious machine. However, despite Tandy's efforts to get away from the Radio Shack image, the 1000 lacks the pizzazz of the other new entries in its price class. The PCjr and the Apple IIc both have vigorous and provocative national ad campaigns, embody a dramatic innovation in appearance (the jr's infrared keyboard, the IIc's transportable design), and include friendly, carefully designed tutorials aimed at the novice.

The *DeskMate*, however, provides much more in the way of truly useful programs than do Apple's or IBM's tutorials. And the tutorial and reference manuals, not available at press time, may be well suited to beginners, in the mold of the famous TRS-80 Model I manual.

The 1000 gives users the power and flexibility of an IBM PC at a much more reasonable price. As compared to the similarly priced PCjr, the 1000 is faster and more expandable (through standard expansion slots and the provision for a second disk drive), and runs a greater variety of the software written for the PC.

Like the IBM computers, the 1000 is manufactured by a stable, well-run company that will provide good service. In fact, Tandy stocks replacement parts for all its computers for seven years after they are discontinued.

If you plan to use your computer primarily for games and education, you may be able to buy one for far less than \$1,000 that fills your needs nicely. But if you're looking to spend around that amount for a computer that means business—but still knows how to have fun—you should consider the Tandy 1000. ☐

The True Story of Dr. Doolittle

ILLUSTRATIONS BY JODY TAYLOR

ONCE UPON A TIME, DR. DOOLITTLE BOUGHT HIMSELF A COMPUTER...

BY JANE WOLLMAN

On Doolittle Road, in a chocolate-brown house hugged in summer by marigolds, white lilacs, and tiger lilies, lives Dr. Doolittle. There's a wishing well in the front yard, and at Christmastime, when snow covers the ground, a big fir tree stands sparkling with tiny colored lights. Dr. Doolittle has a green parrot that hardly ever stops talking; a smart, playful dog, Sparkie; a good-natured horse named Cocoa; plus several dozen unicorns. And every day you can see the townspeople taking their pets to Dr. Doolittle for care.

That's right. This is the tale of Dr. Doolittle. Not the Dr. Dolittle you're probably thinking of. Not Dr. John Dolittle, the fictional animal doctor, who lived in Puddleby-on-the-Marsh and whose adventures fill Hugh Lofting's series of books that became the basis of a film musical. This is the story of Dr. Walter Doolittle, a *real* animal doctor, who lives on a road named for his father in the small town of

Preston, Connecticut.

Like the imaginary Dr. Dolittle, this Dr. Doolittle also had to learn the "language" of animals in order to treat them. However, Dr. Walter Doolittle has learned another important language—computer language. And, he's introduced it, and the whole world of computing, not only to his wife, his children, and his grandchildren, but to scores of friends and neighbors living in the Preston area.

The Doolittles are as much a "computing family" as you're likely to find. They use computers for work, for play, for education, and for engaging in community activities. Just about all the members of the Doolittle clan—which includes five grown children, two daughters-in-law, and six grandchildren, ages newborn-to-9—have absorbed micros into their daily routines. There are computers installed in Dr. Doolittle's offices, in his home, and in the homes of his grandchildren.

JANE WOLLMAN is a New York-based freelance writer. She has written for *Esquire*, *The New York Times*, and *Working Woman*, among other publications. Her book on designing the complete workplace for computing at home will be published next year by McGraw-Hill.

IN THE BEGINNING

It all started with a \$600 computer the veterinarian purchased as a family Christmas gift six years ago. "I originally bought the computer because I realized the children would need to [be] computer savvy," says Dr. Doolittle, a tall, soft-spoken man who specializes in treating small animals—mainly dogs and cats and an occasional raccoon or armadillo. "That first computer was intended simply to get the kids and me going." Dr. Doolittle had never used a computer before, but he was determined to learn how and to acquaint his children with the wonders of bits and bytes.

A year passed. The limited 8K of random-access memory, the clumsy keyboard, and the slow, built-in tape drive of the early-model Commodore had begun to so exasperate Dr. Doolittle that he decided to upgrade to a better, more powerful machine. So he traded it in for a Commodore PET 2001 with 32K. [Editor's Note: *The PET 2001, which is no longer manufactured, was mainly targeted to a school audience.*]

Now, Dr. Doolittle was happy to find, his family was becoming increasingly interested in computing. With his wife, Irene, and daughter Pamela, Walter Doolittle enrolled in a course to learn programming in BASIC.

However, the big turning point—when the computer became a tool almost central to the family's life—didn't occur until about two years later. It was then that Walter sold the PET 2001 to buy a model with a faster operating system: the 32K Commodore 8032.

Irene now felt ready to use the computer to manage her husband's two practices—one run from a home-office in Preston, the other located in the nearby town of Groton. Up until then, Irene had assisted by handling clerical chores using a typewriter and carbon paper. Now, with the computer, she began transferring all of the doctor's nearly 3,000 patient histories from conventional file cards to disks. She also uses the micro, which was placed in the ground-floor office of the Doolittle home, for jobs such as preparing reminders to owners that their pets' booster vaccinations are due.

It was Walter's intention to move the computer to Groton for his office staff. But Irene refused to part with the machine. "I didn't want him to take my computer away because it was saving me so much time." The heart of the matter, she says, is that "once you start using a computer, you don't want to go back to the old way of doing things."

Irene easily won the battle, and the "typing terror," as her husband calls her, remained undisturbed, entering patient records—which include pet's name, sex, age, vaccination history, owner's name, address, phone numbers, and a "Remarks" column—into the computer at the rapid rate of 100 records per hour.

With the continuing need, however, for a computer at the Groton office, Walter had little choice but to buy a second machine. Today, he

The Doolittles in 1981. Since then, two grandchildren have been welcomed to the fold.

has a complete high-powered system at each location. There are, in his Preston home-office, the Commodore 8032 computer—souped up to 96K RAM with a 64K circuit board; a PET 2001 computer (he bought another); a Commodore 8250 disk drive with 2.12 megabytes of storage space; and a model 8024 Mannesman Tally dot-matrix printer with a wide (132-column) carriage. The Groton office holds a PET 4032 computer, also expanded to 96K, a Commodore 8050 disk drive with 1.05 megabyte storage capacity, and a 132-column Epson FX-100 dot-matrix printer.

Most of the equipment, including disk drives and printers, was acquired through trade-ins. "Everybody in computers learns to wheel and deal—to trade and upgrade—as much as they can," says the doctor.

THE CHILDREN CLIMB ABOARD

Meantime, back in 1981, while Irene was being charmed by the 8032, the Doolittle children found themselves becoming more and more attached to it, too. Pamela, in fact, decided to seek a job in the computer field, and is now employed doing data entry and word processing at McLaughlin Research Corp. in Waterford, Connecticut. She takes credit for influencing her secretarial school to expand its word-processing-instruction program.

Twenty-year-old Terry, a nursery school teacher, began using the computer extensively to prepare college reports and term papers. Says Irene: "Terry had been saving for an electric typewriter. But when I taught her how easy it is to use the word processor—particularly for making corrections and deletions—she thought it was the greatest."

Once Walter and Irene had started the younger children on computers, they bought daughter Deborah and sons Charles and Philip, who live in nearby towns, each a PET 2001 and a Commodore Datasette tape drive. The Doolittle grandchildren are now using them, too.

Although they now have computers available at home, the youngsters' first request when visiting Grandpa, he says, is to "play with the computer." Then they're off—either tackling a game or using the machines to write

"ONCE YOU START USING A COMPUTER, YOU DON'T WANT TO GO BACK TO THE OLD WAY OF DOING THINGS."

NOW THERE ARE COMPUTERS IN BOTH HIS OFFICES, HIS HOME, AND THE HOMES OF HIS GRANDCHILDREN

"GET THE PROGRAM THAT DOES WHAT YOU WANT IT TO DO, THEN GET THE COMPUTER TO RUN IT."

letters to friends and relatives.

Deborah's 9-year-old son, Jason, who's saving money to buy a disk drive, says he likes computer games better than video games because "they have a lot more action. With video games, you usually stay on just one level, but with the computer you can go on and on." His Aunt Terry has observed that "Jason likes the type of computer game in which he must figure out things and plan what to do next. He surprised us," she says, "because although he's a very get-up-and-go kid—into sports—he will sit at the computer for hours." Jason plans to be a drummer when he grows up. He says a computer will "tell me how much money I get and when the concerts are."

Right now, Charles and Kathy's 6-year-old, Chuck Jr., who thinks "computers are fun and help you learn stuff," is getting his first taste of debugging. "I try to write some programs, but it says SYNTAX ERROR every time," he explains. "I keep trying to fix it, but I can't. I think I might be able to, though," he adds, undaunted.

Adam, Philip and Barbara's 2-year-old, hasn't yet explored the keyboard, but his brother Jacob, 4, is learning the alphabet with the computer's help. He's already able to type friends' and relatives' names when told which letters to use.

SPREADING THE WORD

Walter is responsible not only for bringing the joy of computing to his own clan, but for introducing computers to other families in Preston and nearby towns. Irene reports that he receives as much mail from members of the New London (Connecticut) Commodore Users' Club as he does for his veterinary practices. New computer owners also telephone for help, and the doctor sometimes even makes house calls to handle a novice's "emergency."

Walter's popularity with local computer users is perhaps exceeded only by the celebrity status he won 15 years ago at the release of the *Dr. Dolittle* film. So many children flocked to his office to take a look at him—it wasn't unusual for 100 youngsters to gather at once in the reception room—that he often was unable to hold office hours. The congestion eased somewhat when he hired someone to ride the children around on Cocoa, then still a colt.

"At times, it was a bit overwhelming—there were so many kids coming to see me that it seemed like a zoo and I was the animal," says Walter, who became a vet mainly because an aptitude test showed him to be suited to a medical career, but he lacked the money to train for an M.D. He says that his name, coincidental to the profession he chose, serves as the

equivalent of "\$20 million in free advertising."

When it comes to managing his practices, Walter depends on commercially available software rather than on anything custom designed. He chiefly uses three packages: *Word-Pro 5 Plus*, from Professional Software, Inc., for word processing—which even "personalizes" form letters he sends to patients (and, in fact, are addressed to each pet, as well as to the owner!); *Jinsam*, a data-base management system from Jini Micro Systems, for maintaining patients' vaccination histories and controlling an equipment-and-supplies inventory, among other uses; and the spreadsheet program, *Visi-Calc*, from VisiCorp, for financial record-keeping and income-tax preparation.

Walter's advice to people planning to purchase a computer is to first shop for software. "Get the program that does what you want it to do, then get the computer to run it," he says. "Most people go about buying a computer backwards. They just concern themselves with hardware brands instead of first thinking about what they want to do with the machine."

MORE WAYS THAN ONE

Besides using computers to run two veterinary practices, Walter and Irene have found a variety of other ways their micros can help them. Irene, who doubles as a real-estate broker, relies on the computer to set up mortgage-payment schedules and to ready apartment leases for properties she handles. She also uses it for buildings she and her sons, Charles and Philip, own. The computer is enlisted to calculate buy-sell decisions affecting mutual-fund investments, as well.

Walter sits down at the computer to work financial analyses, and to program and prepare correspondence and reports. One of his major projects involved using the micro to accumulate and update evidence, plus track time and expenses, for a six-year court case. One program he developed enables stroke victims left with inadequate communication skills to express themselves.

In addition, the Doolittles apply computer technology to regional politics. The Commodore 8032, for example, keeps track of donations made to support a local senatorial candidate, and prints labels for the campaign mailings. Another big job, stemming from Walter's role as chairman of the statewide Concerned Tax Payers Organization, called for preparing and distributing a petition to fight a proposed fuel-tax increase.

In total, Walter has invested about \$6,000 in computer hardware, including the trade-ins and the systems bought for his children. He is already planning the next upgrade: a disk drive with even greater data capacity than the 2 million-plus megabyte model he currently owns. With such a drive, there will be less need to switch disks to access files. So far, his software library has swelled to about 100 file disks.

One main reason for the Doctor's apprecia-

HOW THE DOOLITTLES USE COMPUTERS

Irene, 53. Maintaining and updating patient histories; controlling equipment-and-supplies inventory; word processing for correspondence, completing apartment leases; calculating mortgage-payment schedules; preparing income-tax returns; mutual funds management.

Walter, 52. Financial planning; programming; word processing for correspondence and analyses; updating and indexing material, keeping track of donations and mailings for political campaigns.

tion of computers is, he says, "they make you think more logically." Unlike the fanciful, fictional Dolittle, Walter Doolittle is a man of science. So you aren't likely to find anything in his house as incredible as the two-headed pushmi-pullyu with which Lofting's Dolittle dwelled. Unless, of course, you count the unicorns. And there are more than 50 of them: 47 in one room, others scattered throughout the upper level of the house, even a couple in the kitchen.

But don't worry—the mythical creatures are actually stuffed, drawn, or sculpted, and make up daughter Terry's prized collection. This story, you'll remember, is a true one. **FC**

MURDER AT MERRILL 220

A
TEXT-ADVENTURE
MYSTERY
BY
JEANIE FRANZ RANSOM

B

uddy Anderson couldn't wait to get home.

He knew there had been a murder, and tonight he felt he finally had enough information to solve the crime and claim the \$100,000 reward.

Buddy burst into his small apartment, barely pausing to throw his overcoat on a hook by the door. He went immediately to his computer, which sat on a cluttered desk in the living room. Remnants of the previous evening surrounded the keyboard . . . crumpled wads of paper, clues provided with the text-adventure game, a pizza box with a few remaining hunks of cheese clinging to the inside cover.

He impatiently swept everything onto the floor. He wanted nothing to get in the way of the game tonight.

He was so close, after weeks of working on it night after night. He had thought about the game all day as

Fresh

he went through the motions of fixing engines and changing tires at Rod's Body Shop. It was while he was installing a new muffler on a customer's car that the answer hit him. It was so obvious. He couldn't wait to wash his hands of the day's drudge and grime and escape into the game.

Buddy sat down at his desk and turned on the computer. The monitor displayed the name of the text-adventure game: MURDER AT 220 MERRILL.

He impatiently scrolled past all the background information he had seen a hundred times before. The information established his character as Detective Harry Honcho. He had been called to the scene of a murder at 220 Merrill, the imposing home of millionaire Dutch Langdorf, who had made his fortune selling gold on the commodities exchange. Now Langdorf was dead, with only his wife, Veronica, and their pet poodle, Fluff, surviving.

Buddy had already been to the Langdorf house many times—via computer, of course. As Detective Harry Honcho, he had questioned Veronica, searched the house, even talked to the servants and made friends with Fluff. He had gathered many important clues along the way, and acquired a kit that was designed to tell real gold from fake gold—if he ever got near any. But until now, Buddy had never had quite enough clues or information to solve the murder . . . the murder that would award him \$100,000 from the software manufacturers if he could solve it. Buddy just needed a little more time, a little more information. He knew that tonight was the night . . . he could almost smell that \$100,000.

Buddy continued to scroll through the text, until he reached the part where Harry Honcho was on the driveway in front of the towering mansion, set on 18 acres so lushly landscaped you would swear it was a national park. This was where Buddy always hit "N" on the keyboard, advancing Harry to the front door, where he would be admitted by the Langdorf's rather forbidding German maid. But tonight, Buddy decided to try a different avenue. He pushed "W" and the RETURN key. The monitor read, YOU CANNOT GO THAT WAY. DO NOT PRESS "W" AGAIN! Buddy pressed "W" again, more insistently this time. The monitor read, ARE YOU SURE YOU WANT TO DO THIS? Buddy typed YES and pressed RETURN.

Suddenly, he felt his fingertips tingling, and a black veil descended over his eyes. He tried to fight the cloud that was making it impossible to think. He closed his eyes and the room careened sickeningly. Everything went blank.

Buddy awoke with a foreign object quite rudely poking his back. He was staring straight up into the night, with the moon staring right back at him. How had he gotten outside? He knew he wasn't dreaming, and he hadn't even had a beer before sitting down at the computer.

Buddy rolled to one side and reached behind him to find the object of his discomfort. It was a knife. Horrified, he sat straight up and saw a dark form lying near some bushes several yards away. Cautiously, he crept over to the still shape. It was a person, and by the light of the moon, the face matched the description he

knew so well from playing the game . . . it was Detective Harry Honcho.

But Harry wasn't dead yet. As Buddy leaned over him, Harry forced open his eyes and gasped, "Come closer." Buddy wasn't sure he wanted to, but his curiosity got the better of him.

Harry struggled to speak. "I got too close to the answer. But somebody's gotta solve this murder . . . the final clue is in my coat pocket . . ." Harry's sentence trailed off as he bubbled his last breath.

Buddy looked around frantically. This couldn't be happening! And then he saw the unmistakable Tudor mansion in the eerie moonlight and knew . . . somehow he had gotten inside the 220 Merrill text-adventure game. But how? Then he remembered pressing the forbidden key. Now what was he to do?

Buddy remembered Harry's last words and dug a piece of paper from his coat pocket. It was a candy bar wrapper. He looked again, and found another piece of paper. Examining it under the light of the moon, he saw it was a map. It was a clue he hadn't found in the game before . . . the final clue he needed to wrap up the mystery. Buddy had already figured out that Langdorf had met his messy fate because he had been caught selling fake gold bars to some very important businessmen who didn't appreciate that kind of thing. But Buddy hadn't yet figured out who had actually killed Langdorf, and where the real gold bars were.

He was distracted by a sudden blaze of light from the ominous dark house. It was late now, and he assumed Veronica Langdorf and the servants had gone to sleep long ago. Buddy ventured closer to the house and saw a woman through the open upstairs window. He watched as she disappeared, then returned with clothes heaped in her arms. She must be filling a suitcase, and a very large one at that. It could only be one person, Veronica Langdorf. She mustn't get away—not before Buddy could follow the map.

On a hunch, Buddy ran toward the rear of the house and found the garage. There was only one car inside . . . a powder-blue Mercedes. With expert hands, he popped the hood and tinkered around for a few moments. Veronica Langdorf wouldn't be going anywhere in this car.

Buddy jumped as he heard a door slam. Veronica must be on her way out. He ran from the garage, heading blindly for the back of the house. As he reached the safety of a series of tall, square hedges, he paused to look at the map once more. He was startled to see hedges on the map much like those he was crouching next to. They were arranged in a maze, with a giant "X" marked inside one of the corridors.

Buddy knew he didn't have much time before Veronica would discover her car trouble and start looking around the grounds. He sprinted toward the entrance to the maze and ran up and down the vast corridors, his breath ragged in his throat. He kept glancing at the map as he ran, trying not to stumble. A wrong turn here . . . a dead end there . . . he heard the agonized wheeze of the Mercedes' tortured engine. It was only a matter of minutes now.

Buddy turned and stumbled, falling with a slam against the ground. He pulled himself up, ready to continue, then thought of looking down to see what

JEANIE FRANZ RANSOM has written for Seventeen, Sunday Woman, and the Detroit Free Press. This winter, she and her husband are planning to write their own adventure game. This is the first piece of fiction she has published.

had caused him to trip. He felt around the clipped grass and found an edge with his fingers. Dropping to his knees, he pulled on the sod. It came away in one neat hunk to reveal a steel door with a handle.

Buddy yanked on the handle. Nothing happened. He summoned up all his strength and pulled harder. The door flew open, revealing a spray of light that almost blinded him. Poking his head inside, he thought he was hallucinating. Bars upon bars of gold were stacked from floor to ceiling in a room directly beneath him, with corridors stretching into darkness beyond. Was this the real gold? There was only one way to find out.

Buddy pushed his feet through the opening and dropped to the floor below, his soles stinging from landing on the concrete. Just as he was pulling out the gold test kit provided with the game, he heard a noise above him and looked up into the grinning face of Veronica Langdorf. She had always been described in the game as resembling a battleship, but close up, she looked more like 10 battleships. Her round, fleshy face was flushed from hanging upside down as she peered through the opening.

What are you doing here?" Her voice echoed in the underground chamber. "Not that it matters. You won't get out of here alive, or rich!" Her face disappeared for a brief moment and then Buddy saw with horror that she was preparing to drop down to the floor beside him. He turned to pick up a gold bar for protection as she landed with a solid "thwunk"—too close for comfort.

"Ah, I see you found the real gold!" Veronica smiled with teeth that revealed even more gold. "But it's all mine now. A reward for working for my husband all these years. You think I killed him, don't you?" She hooked one thin eyebrow at him.

In fact, at first Buddy had thought she'd done it, but that was too obvious. The answer was just a shade less so. He managed to stammer out an answer, watching her warily. "No, I think someone else killed him for you, so you wouldn't have to soil your lily-white hands. I know you were the one who filled all the orders for gold . . . but you substituted fake gold, bit by bit, hiding the genuine article for yourself. Your poor husband never knew he was dealing in fake commodities . . . until somebody got mad enough to kill him!"

Veronica smiled. "That's right. You're a smart one, but not smart enough to live." She lunged toward him and he saw the gleam of a knife, the same type of knife he had found near Harry Honcho. Buddy managed to hurl the bar of gold he had been holding, throwing her bulky body momentarily off-guard. He turned and ran down the nearest corridor. It seemed like all he had done tonight was run for his life. And all he had wanted to do was finish playing his innocent little text-adventure game. He never thought it would become this real. Buddy vowed never to complain about the dullness of his job again.

Buddy heard heavy footsteps behind him as he reached a dead end. The dim light in the corridor was just enough to make out a door blocking his escape. He turned the handle, sure that it would be locked. Miraculously, it swung open.

The scene that greeted his eyes almost seared them with brightness. Gold bars filled the back of a large

delivery van, the door open as if somebody was in the middle of loading the cargo.

Buddy realized that *this* must be the real gold. Veronica had thrown him off with the stuff in the other room. He quickly got his gold test kit and climbed into the back of the truck to rub one of the gold bars with a special test paper. It was the real gold, all right. Hearing sounds in the corridor, he lept from the truck, slammed the back door, and ran to the cab. There was no key, but that didn't stop him. He reached into his jeans pocket, pulling out a bit of wire left over from work, and quickly hot-wired the truck. The engine roared. Now he could get away with all this gold . . . and the \$100,000 prize money. He laughed until he realized he was still inside the game.

How could he get out? The old-fashioned *Wizard of Oz* trick of tapping shoes together and wishing for home wouldn't work in this new computer age. There was a large garage-type door between him and the outside, with no way to open it except with an electronic device . . . he could see the mechanism from where he sat. Just as he was ready to leave the relative safety of the truck, a face pressed against the window, hideous now. Veronica may not have killed her husband directly, but she certainly looked like she was going to kill Buddy all by herself. He saw the gun and threw his hands up in a futile attempt to shield himself. He heard an explosion and lights danced before his eyes, more brilliantly than a thousand gold bars. Buddy fell blissfully into unconsciousness, dark and cool.

Buddy awoke with a splitting headache. He was on the floor beside his computer. He felt his head gingerly, but there was only a bump. He looked around at the familiar surroundings, his old sofa, the empty pizza box. He was alive. What a nightmare, he thought. But then the full realization of last night's encounter came rushing back at him. Veronica had to be stopped . . . that dame belonged behind bars! Hands trembling, Buddy began to dial the Police Department. Then he remembered. It was only a game. And although he'd come close, he still hadn't gotten the name of the murderer. Veronica had been too smart . . . too smart for all of them.

Still, maybe he could call the software manufacturer, tell what he knew about Veronica, and collect half the prize money. He could sure buy a lot of beer and pizza with \$50,000.

Buddy reached for the phone and dialed the software manufacturer. The line was busy. He paced around the living room and tried again.

When a pleasant woman's voice answered the phone, Buddy blurted out, "I'm calling in regards to the 220 Merrill murder. I don't have the exact name, but . . ." The woman interrupted him in midsentence.

"I'm sorry, sir, but someone's already solved that one—just this morning. In fact, we mailed out the check a few minutes ago."

"Could you tell me who solved it, please?" Buddy managed to stammer into the phone.

"Someone named Veronica Langdorf. Funny coincidence, huh?" The woman laughed lightly.

As Buddy fainted, he dimly heard her say, "Would you care to send for one of our *new* text-adventure games, sir?" No, Buddy thought, he had had enough excitement for a while. Maybe he would just stick with *Pac-Man*.

The numbers underneath each note represent that note for the computers shown. The first number in each column is the note's duration. Both numbers are used as data in the music programs (next page).

The best way to learn how to program music on your computer is to start by experimenting with a simple, one-line melody. Programming a tune like "Home on the Range" won't tie you up for hours, and it's simple enough

MICHAEL HOWARD, a technical writer who has worked for Atari, General Foods, and other corporations, has played classical guitar for 15 years. ALAN ARTHUR is a freelance programmer who specializes in games for the Atari.

that you can check your work by humming along. You can just type in the program we've written and hear your computer sing, or, you can read on and learn the logic of music programming.

MELODY

A melody is a string of notes played to a certain beat and at a certain speed. Each note has a pitch (high or low sound) and lasts a specific length of time. A melody also has rests, or brief periods of silence, between some of its notes. The tune proceeds at a particular rate or tempo—what you tap your foot to.

Programming a melody involves expressing four variables—pitches of each note, silences (rests), durations of pitches and rests, and tempo—in terms the computer can understand. To summarize, we'll be learning to make the computer . . .

1. Produce sound at a certain pitch.
2. Turn off sound to produce a rest.
3. Hold a sound or rest for a certain length of time in relation to other notes and rests.
4. Do the above repeatedly at a consistent tempo.

PITCH AND RESTS

Most personal computers generate tones through built-in hardware—either a tone generator or music synthesizer chip. In systems that don't have such components, musical tones can sometimes be produced by using a machine-language routine with POKES, as we've done here for the Apple.

The mechanics of playing a note differ from one brand of computer to another. Some computers have a SOUND command built into the BASIC language that lets you turn sound on and off, control its pitch, perhaps its tonal quality, and sometimes its duration as well. Other computers don't have such commands—Commodore sound, for example, is controlled by POKEing memory locations.

The one thing all SOUND commands and other systems have in common, however, is that they require numeric input. To produce a sound at a certain pitch you have to express the pitch as a number. The first step in preparing a melody for your computer, therefore, is to convert its pitches into a list of corresponding numbers. (Note: some IBM PC versions of BASIC, and Extended Color BASIC for the TRS-80 Color Computer, offer a PLAY command that lets you express an entire melody line as a string of characters. This is an advanced feature.)

Pitch-numbering systems vary widely from one brand of computer to another. As shown in the sheet music, the note D (above middle C) has a numeric value of 108 on Atari, Apple, and coincidentally, CoCo; 294 for TI; 147 for VIC-20; and 18/209 for Commodore 64 (see the C 64 program notes for an explanation of these two numbers). Look in your owners' or BASIC manual for a note-to-number conversion table.

On most systems, playing a note with a pitch value of zero will turn off the sound (a null value of 44733 will do that for the TI). So when you are converting your melody into a table of pitch values, you can use zeros (or nulls) to mark the rests. For those few machines with pitch-numbering systems that do not include a null value for silence, special programming steps must be taken to create a rest (see CoCo and Apple versions).

DURATION

Once you have pitch values for the notes in your melody, you can go on to determine the relative duration of each note. The technique we've used here takes the note of shortest duration as a common denominator, and expresses all other durations as multiples of this value. As you can see from the sheet music, the shortest notes in "Home on the Range" are eighth notes—the ones you sing under "where the" in "where the Buffalo roam"

Our procedure was to give all the eighth notes in the melody an arbitrary duration value of 1. Then, by tapping our feet and humming the tune, we decided that some of the notes lasted twice as long as our minimum (quarter notes), other notes three times as long (dotted quarters), some four times (half notes), and some six (dotted halves). The last line in the table below the sheet music shows the relative durations we came up with. Try humming the tune and see if you agree with our findings.

TEMPO

By supplying relative durations, you have told your computer how long each note lasts in relation to the others, but you have not told it what tempo to maintain when counting off the duration of each note. Computers count very fast, so if you asked the computer to play the melody in its current form with the small relative duration values you supplied, the music would end in a matter of nanoseconds. Too fast!

The best way to slow things down is to make each note X times longer. Therefore, multiply each *relative* duration by a certain constant (X) so your melody doesn't sound like a 33 rpm record played at 45 rpms.

The particular multiplier (tempo value) you use depends on two factors—how fast your computer can count, and, of course, how fast you want the melody to play. In the programs that follow, we use tempo constants of up to 100. If you'd prefer a slower or faster tempo, try increasing or decreasing the value of the variable TEMPO in line 10.

PULLING IT ALL TOGETHER

Though the programs presented here are each slightly different, all work more or less as follows: Each note and rest in the melody is represented by a pair of numbers (three numbers each for the Commodore 64) signifying pitch and relative duration. These numbers are stored in DATA statements.

For each note, the computer READS a pitch value and a corresponding relative duration value from the data. It then plays the note or handles the rest (silence) by the following procedure. First, it calculates an *absolute* duration ADUR for the note or rest by multiplying the relative duration by the tempo constant, TEMPO. Then, it plays the note. The process repeats for each note or rest in the melody. When the computer reaches the end of the data, it finds a set of markers we've planted there: -1s. Then the condition PITCH = -1 is satisfied so the program stops. Note: You can modify the programs below to play your own tunes. Simply substitute new music data (numeric values) for the "Home on the Range" data. Remember to mark the end with -1s as explained above.

So there you have it. These programs might be a little confusing at first, but if you keep on going over them as though you were the computer reading each line, you'll soon understand how they work.

SANTA CLAUS

BY JOEY LATIMER

Apple Version of Santa Claus

Santa Claus, or St. Nicholas, is an enduring symbol of the Christmas season. In fact, though, the familiar image of the bearded Santa in a red, fur-collared suit is a fairly modern idea. It's based on a newspaper illustration rendered only a little over 100 years

ago by the cartoonist Thomas Nast. Now, we've modernized Santa even further by bringing him to your computer screen in living color and animation! Type in the program as shown, SAVE it to disk or tape, and type RUN. Merry Christmas! Ho! Ho! Ho!

IN A CLASS BY HERSELF.

When Jennifer's parents discovered DesignWare programs, they put Jennifer in a class by herself.

Because unlike most educational software, DesignWare gives Jennifer individualized attention for months on end.

For starters, DesignWare focuses on important skills—the ones Jennifer learns in school. In fact, all DesignWare programs are developed by educators. And tested by kids.

The graphics, sound and game play are unquestionably superior. If they weren't, they couldn't keep learners like Jennifer involved for as long as they do.

DesignWare programs provide multiple levels of challenges, which let Jennifer continue to grow long after she first starts to use each program.

But best of all, Jennifer won't really outgrow a DesignWare program. Because they're designed to let her type in her own questions and problems.

So Jennifer's parents can tailor her DesignWare program to match her homework assignments. Or Jennifer can change her program to challenge her parents.

Jennifer's parents think DesignWare is in a class by itself. So it's not surprising they give her DesignWare. Because they think Jennifer's in a class by herself.

FOR ALMOST EVERY AGE, SUBJECT AND COMPUTER.

DesignWare offers programs for children ages 4 to 16, and for parents of all ages.

They cover a wide range of important subjects including math, geometry, algebra, geography, vocabulary, spelling, grammar, history, computer literacy, and music.

And they run on Apple[®], Atari[®], Commodore 64[™], IBM[®] PC and IBM[®] PC Jr. For the name of your nearest dealer or to order our free catalog, call us toll-free at (800) 572-7767. (415-546-1866 in California.)

GET STARTED ON THE RIGHT FOOT BASIC, A TUTORIAL

BASIC, A TUTORIAL is a great way to get started on your Commodore 64. It helps you to better understand your Commodore so that you can use it with ease and effectiveness.

BASIC, A TUTORIAL is a MUST for both recent Commodore purchasers and dedicated Commodore owners. It is a program that not only teaches you about the functions of the 64, but also how to use them to design your own programs.

Complete with two disks and a comprehensive lesson-by-lesson text manual, BASIC, A TUTORIAL takes you from turning on the machine, through lessons on all the B.A.S.I.C. keywords and commands, to finally completing your own telephone/name and address database.

Here are some of the topics you will cover through actual hands-on experience: the Commodore 64 keyboard; B.A.S.I.C. keywords, punctuation, and program modes; on-screen editing and printing; mathematical operations; subroutines; string handling; system utilities; disk files; and using a printer.

Easy to use and fun to learn, no previous programming experience is required. BASIC, A TUTORIAL is a program that can be used by anyone---of any age. Even experienced programmers will find it to be a handy reference guide! It's the first step to your Commodore 64.

BASIC, A TUTORIAL is only one of 56 new educational programs in the ChallengeWare series.

Find BASIC, A TUTORIAL at your local dealer or call TOLL FREE

TIPS TO THE TYPIST

1. When you type program lines into your computer, be sure to copy them *exactly* as written. Numbers, punctuation marks, and spaces are very important!
2. Remember to press RETURN or ENTER *after* every completed program line.
3. Run the program when you finish typing it in by typing RUN and pressing the RETURN or ENTER key. If the computer gives you an error message, don't panic. Mistakes can be fixed. List the program by typing the word LIST and

- pressing the RETURN or ENTER key and double-check each line. A foolproof way to correct a mistake is to type in the entire line again (including its line number). When you list the program again, you should find the new line in place of the old.
4. If you need more help, read the programming guide written for your computer. It will answer questions that can't possibly be covered here.
5. When all else fails . . . turn off the computer and relax.

NEW YEAR'S EVE

BY JOEY LATIMER

You and your trusty computer have gone through some fun times in 1984. So this December 31, why not gather your family 'round the screen and all ring in the new year together! Our *New Year's Eve* program is a blast and then some—it's almost as much fun (and nearly as noisy!) as watching the ball drop in New York's Times Square!

Type in the program exactly as shown, and SAVE it to disk or tape. Be especially careful when entering the DATA statements! We advise you to test RUN

the program well before the hour of midnight. That way, you can correct any typing errors before they can spoil the fun (*see Tips to the Typist*).

When you RUN the program, the first thing you'll see is a prompt telling you to enter the current time in hours, minutes, and seconds. Enter the time in six digits, without any intervening spaces or punctuation (example: 9:55:02 p.m. is entered as 095502); press RETURN or ENTER. At five seconds to midnight, things should start popping!

The gifts computer users can't wait to open

Introduction to Apple II+ Keyboarding

By Peter Mears. Put an end to "hunt and peck" on the micro with a gift designed to improve keyboarding skills *fast*. Featuring a wide variety of exercises and drills graded by difficulty, this combination book and disk set makes an ideal practice package. \$40.45

Arcade Games for the Commodore 64

By Fanfare House Inc. Software as challenging as it is entertaining. By using the documentation in the book, players can change the 12 original games into hundreds of new ones...and learn programming at the same time! Disk with complete documentation. \$32.95

Exploring the NEC PC 8201

By Marvin C. Mallon. *The first complete guide* to getting the most out of NEC's popular new portable for people on the go. Includes a clear explanation of its operation and capabilities; detailed descriptions of all available software; and much, much more. \$18.45

The DEC Rainbow 100: Use, Applications and BASIC

By Eric W. Kiebler. Here's the book every DEC Rainbow 100 owner has been waiting for! Filled with examples, it explains everything from BASIC essentials to the procedures for using subroutines and writing programs. \$18.45

Your TI Professional Computer: Use, Application and BASIC

By Thomas W. Madron and C. Neal Tate. How to use TI's successful business personal computer to boost productivity—with in-depth chapters on financial modeling and database management, and appendices listing information and software sources. \$20.45

The Business Microcomputer Handbook: Evaluation, Acquisition and Use

By Louis Fry and Marcia Adams. *Do I really need a computer? Which one should I buy? How much will it cost?* Two experts supply up-to-the-minute answers and take a hard look at true cost and contract negotiation—subjects covered *only* in this book. *With worksheets and checklists.* \$19.45

Thinking About (TLC) LOGO: A Graphic Look at Computing with Ideas

By J. R. Allen, R. E. Davis and J. F. Johnson. Delight your favorite LOGO-phile with "an irreverent, freewheeling discussion of sophisticated computational ideas...[that provides] a feeling for the proper breadth and perspective of LOGO."—*The National Logo Exchange* \$17.45

...And a FULL-COLOR activity book for the whole family! Nudges: IBM LOGO Projects

By Steve Tipps et al. Close to 100 projects focusing on math, art, music, and logic make learning LOGO fun for all ages. Written with the technical support of IBM. \$16.95

WE'VE DISCOVERED A NEW WORD IN SOFTWARE. GIRLS.

Jenny of The Prairie
The first story in the series is about a brave pioneer girl and how she faces winter alone.

Cave Girl Clair
Alone in pre-historic times, Clair must learn to gather food and tend fire to survive.

Chelsea of the South Sea Islands
A 19th-century British girl is stranded on a tropical island and surrounded by danger.

Lauren of the 25th Century
Lauren's challenges include maintaining a reclamation project in the desert and protecting fragile life forms.

Met Jenny, Clair, Chelsea, and Lauren, four software adventure stories designed especially for young girls from 7-12.

With strong young girls as heroines and survival as a goal, these stories are fun and fascinating. But they're more than that. They're educational, too.

Rhiannon Software-Adventure Stories help girls become familiar with computer keyboards and develop computer literacy. In fact, a leading computer magazine said "...as an introduction to computers and computer games (Rhiannon Software) is super, and it's bound to be a catalyst for some female computer geniuses."

But unlike alien-zapping computer games, Rhiannon Software encourages creativity and problem-solving along with computer skills.

The players have to be quick and imaginative to help the heroines survive in hostile environments. How can Jenny find enough food to get through the winter? Will a cave be a safe shelter or should she build a lean-to? And how can she avoid the wild animals—like mountain lions and rattlesnakes—that also live on the prairie?

Jenny, Clair, Chelsea, and Lauren are compatible with the Apple II, IIe and IIc, IBM PC, PCjr., Commodore 64, and Atari computers. And with young girls everywhere.

Ask for Jenny, Clair, Chelsea, and Lauren at any store that sells quality software.

BIG ON FEATURES.

\$139⁹⁹*

SMALL ON PRICE.

You read that right. A full 80 column, 80 character-per-second, dot matrix thermal printer, complete (with a 90 ft. paper roll, interface cable and power pack), ready-to-run—at 800 words per minute—as low as \$139.99. But your wallet isn't the only thing the HUSH 80 is compatible with. Its Commodore, Centronics Parallel or RS232 interfaces assure compatibility

with most popular computers.

And you'll find the HUSH 80 printer is big on lots of small things too. It weighs about one-half the amount of its nearest competitor (its compact size fits conveniently into a briefcase). And it's extremely quiet, with fewer working parts, which means less noise and less to go wrong.

Ask your local computer store

or dealer for the HUSH 80 today. And if he doesn't carry it, call us at 415/786-ERGO. And find out where to get the little printer that does the big jobs.

**HUSHTM 80
PRINTER**

**LESS PRICE, LESS NOISE,
LESS SIZE.**

[“Hi, we’re from Europe. Where’s the gold?”]

A SECOND CHANCE to GET the NEW WORLD RIGHT.

IF COLUMBUS HAD LANDED IN NEW JERSEY; if Cortez had been nicer to Montezuma; if Pizarro had been a more generous soul, would the world today be any different?

If you’ve ever wondered about things like that, you’ll like *Seven Cities of Gold* very much indeed.

It’s a kind of adventure. An unusually rich and technically impressive one with new continents to explore, natives to encounter, resources to manage and trade routes to establish. But beyond all the neat stuff *Seven Cities* throws up on the screen, there’s something else happening here.

It feels quite odd to look at the map and see nothing. Of course you have to explore the more than 2800 screen new world in order to map it. But the way the natives act, the way you get older,

This is Europe, in scrolling 3-D graphics. You outfit, visit the Crown, launch your ships, and if you’re cut out for this, you return later to tell all sorts of wild stories about what it’s like over there.

There are over 2800 screens to explore in the new world. As you scroll through them, seasons change.

Animated natives surround you. They have no reason to trust you. The drum beat quickens.

Trading with the Aztecs is tricky. You could wind up with enough gold to build an empire. Or as soup.

Home again you view your maps, pat yourself on the back, and consider your place in history.

the way seasons change and your men behave, and the way your reputation precedes you gives you a sort of feeling that’s unexpected in computer games. It’s deeper. Maybe a little disquieting. It plays as much in your head as it does inside your computer.

Seven Cities does all this with the real world or, better still (since the “new” world really isn’t anymore), it will construct any number of completely detailed hemispheres for you to try your hand with.

Designed by Ozark Softscape (the people who made *M.U.L.E.*, *Infoworld’s* “Strategy Game of 1983”), *Seven Cities* is about as near a recreation of history as has ever been accomplished, with or without a computer.

Find it. Stomp around in it. See if you can’t do a better job than all the celebrated figures who got us into the mess we have to deal with today.

SEVEN CITIES of GOLD™ from ELECTRONIC ARTS™

MACHINE REQUIREMENTS: *Seven Cities of Gold* is available for the Apple II+, IIe & IIc, Commodore 64 and Atari home computers. *Seven Cities of Gold* and *M.U.L.E.* are registered trademarks of Electronic Arts. GOOD GRIEF!
LOOK WHO'S ON
RANDOM HOUSE
SOFTWARE!

PEANUTS Characters: © 1950, 1951, 1952, 1958, 1960, 1965, 1966, 1968, 1975, United Feature Syndicate, Inc.

One of the world's leading children's book publishers and the world's best-loved characters are together again.

The results are these brilliant new PEANUTS® programs for your children.

They'll learn spelling, vocabulary, math and, above all, learn to love learning. Each of these exciting

new programs uses vivid color graphics and truly lifelike animation designed for your home computer.† Plus they're on *two-sided* disks to give you *twice* the fun for the price of one.

Visit your neighborhood computer software dealer now and bring back some bright new friends for your children. The kind of friends who never have to go home.

RANDOM HOUSE
Software

ALL THE BEST FROM OUR HOUSE TO YOUR HOUSE.

†For Apple II+, IIe, IIc. Soon for Commodore 64—disk drive only. (Trademarks of Apple Computer, Inc. & Commodore Electronics Ltd.) © 1984 Random House, Inc. All rights reserved.

Get off and running with free computers, peripherals and accessories.

The Hayden HeadStart Program. An easy way for your child's school to get the computers, peripherals and accessories that have become such an important aspect of modern education.

We've packaged special coupons inside every box of Hayden educational software. Collect these coupons and give them to your school. Ask PTAs and other groups to help. When your school has enough coupons, we'll redeem

them for free software, diskettes, KoalaPads,[™] joysticks, even a complete Apple[™] IIe computer!

Enlist enough community support, and your school will have a fully stocked computer facility in no time.

For more details on the HeadStart Program, see the special display at your local computer dealer, or contact Hayden Software, Department HeadStart, 600 Suffolk Street Lowell, MA 01854, or phone toll-free 800-343-1218.

HAYDEN.
AMERICA'S FIRST FAMILY OF SOFTWARE.

Give Your School A HeadStart In The Computer Race.

PROGRAMMING P.S.

Corrections to Previous Months' Programs

Apple/Name That Monster! (October, page 90)
Use the ADAM version as instructed, but leave line 340 unchanged and instead change line 320 to read
320 FOR T = 1 TO 120

IBM PC & PCjr/Brain Terrain (August, page 90)
You can improve the sound effects that go with this puzzle by changing lines 260, 300, and 310 to read as follows:

```

260 CLS:FOR X=440 TO 1046:SOUND X,.01:NEXT X:SOUND 327
67,0
300 CLS:NS="WHOOOOSH!":LOCATE 8:GOSUB 2000
310 FOR X=440 TO 1046:SOUND X,.03:SOUND 1500-X,.01:NEX
T X:SOUND 32767,0

```

TRS-80 Model 4/Mummy Maneuvers (October, page 74)

Line 4000 contains a syntax error as published. Here is the correct version:

```
4000 PRINT@ (Y-1,X-1),"";:RETURN
```

Also, you can improve the appearance of the pyramid door and the display for day five by substituting **XP=32** for **XP=33** in line 10 and **TX=1** for **TX=0** in line 20.

LEARNING & FUN GO HAND 'N' HAND

From the Producers of Rocky's Boots™ Robot Odyssey I™

A Revolutionary New Educational Software Program for Teenagers and Young Adults.

Fall into the underground world of Robotropolis and see if *you* can find the way back to civilization. Build maze-blazing robots! Trek through five mini-games! And become an original game designer!

Finally, an educational software program that's both an adventure game and robot construction set. Learn how to design integrated circuits, burn chips and program robots.

And "they" said it couldn't be done.

So take on the challenge. Stop by your local dealer and see Robot Odyssey I for yourself. It's the game of the decade.

Enter the Robot Odyssey I Sweepstakes!

2 Grand Prizes: Androbot® Topo® Robots.

10 Runner-Up Prizes: Androbot's New F.R.E.D.™ Robot.

To enter, send your name and address along with the phrase, "Robot Odyssey I Sweepstakes," to The Learning Company (address below). All entrants receive a free color poster.

Entries must be received by December 20, 1984. This offer cannot be used in conjunction with any other offer. Void where prohibited taxed or restricted by law. Please allow 6-8 weeks for delivery.

The Learning Company and all product names are trademarks of The Learning Company.

Programs by The Learning Company are available on Apple® II, IBM® PC and PCjr®, Commodore 64™ and Atari® computers. The suggested retail price ranges from \$29.95 to \$49.95.

Apple, Atari, and IBM are registered trademarks of Apple, Inc., Atari, Inc., and International Business Machines Corp., respectively. Commodore 64 is a trademark of Commodore Electronics Limited.

Androbot and Topo are registered trademarks of Androbot. F.R.E.D. is a trademark of Androbot.

BY INVITATION ONLY

An Exclusive New Year's Eve Party You Won't Want To Miss!

PUZZLE BY PETER FAVARO
PROGRAM BY STEVEN C.M. CHEN

It arrives in the mail on Dec. 31, 1984, in a curious-looking envelope decorated with what at first appear to be candy canes. On closer inspection they turn out to be question marks — hundreds of them.

"What kind of odd holiday greeting could this be?" you wonder. You check the postmark and with great difficulty make out the letters D O R M I R. The name sounds familiar but you're not quite sure why. "Do I have an aunt or a cousin living on a Dormir Road or a Dormir Lane?" you ask. "No, that's not it . . ."

You examine the envelope more closely and notice that the flap is sealed shut with a seal that reads: FROM THE ROYAL PALACE OF PROTO. "Proto? Where have I heard that name before?"

As you slide your thumb under the flap and pop it open you make the connection: *Proto and The Dormirians!* That's it! They were in one of my favorite FAMILY COMPUTING puzzles! (April 1984 issue.)

Eagerly you tear the envelope open. Inside is an invitation to a very exclusive New Year's Eve party being thrown by King Proto and all of the characters from FAMILY COMPUTING's 1984 puzzles! Everyone will be there: The high school sweethearts Kurt and Dede (*February 1984*); the mischievous chefs (*June 1984*); and even Frank ("Fingers") Larson, temporarily released from jail!

But where is the party being held? Although the postmark shows that the envelope was mailed from the planet Dormir, the invitation states that the

party will be held on Earth—and not necessarily at King Proto's summer home! A map (shown) is included with the invitation and shows the nine

places where the party could be held. It also includes your home. But unfortunately, the directions to the party are in code. In dismay you read...

ILLUSTRATION BY JOSH GOSFIELD

Why do you think they call it a picture tube?

Because it's a TV tube. And you watch pictures on TV.

So, is it any wonder that you're disappointed with an expensive computer that shows you nothing but words? That sort of suggests you might want to go home, turn on the set and *read* the Love Boat.

your powerful commands to run Homeword™, the remarkable new home word processor.

So, other than a few keys to move you around the screen, all you need to remember is nothing.

If you don't think pictures work better than words, consider some of life's most urgent communications.

It's no accident that pictures have replaced words wherever people need information fast. So why shouldn't you have the same advantage in your home

word processor?

That's why *Family Computing Magazine* calls Homeword™, "...a program of unbelievable simplicity. And its performance has not been sacrificed to its ease of use." You can't argue with that!

Just how fast do pictures work? HOMEWORD™

It became the #1 home word processor in just six weeks.

Congratulations. You've just learned 50% of Homeword™.

That's because these two buttons control fifty different pictures. Those pictures are

SIERRA™

UBZ KHVD

The sun is beginning to set and soon the party will begin. You know you don't have time to chase from place to place at random, but if you carefully study the map, you'll find the keys to decode the directions. When you have figured out the code, use your Deluxe Dash Decoder machine (your computer) to unravel it.

HOW TO PLAY

Set your computer to all uppercase letters before playing *By Invitation Only*. After you type in your name, the Deluxe Dash Decoder machine will be ready to go. Two alphabets will appear on the screen. The bottom alphabet will remain stationary. To shift the top alphabet press "B" (to go backward) or "F" (to go forward.) For example, if you press the "F" key once, the top alphabet will shift forward by one letter so that the upper A will be positioned over the lower B. This sets the machine to

decode all A's to Bs, all Cs to Ds, etc.

When you discover the proper setting to decode each line of the instructions, press "D" to decode. Type in one line of the coded directions, then press RETURN or ENTER.

A "decoded" line will appear on the screen. You will then be asked if the line is correctly decoded. If English words are formed (and you have not made any typos), press "Y" for yes. (The computer will not accept any directions with typos.) If gibberish appears on the screen, press "N" and adjust the Deluxe Dash Decoder machine to a different offset or enter another line to be decoded at the same setting.

The decoder machine will store every correctly decoded line. These can be read at any point by typing "R". If you have trouble decoding any of the directions, type "H" (after typing "R") for a helpful hint.

Once you have correctly decoded all nine lines, the full directions to the party will appear on the screen. Press a key, and you will arrive at the party. We hope you have a wonderful time and a very happy new year! *(The solution will appear in next month's issue.)*

Give The Gift Of Education

The holidays are coming. That means parents will be shopping for computer gift items for kids...and for each other.

If you're looking for more than just another video game, take a look at these educational software packages from South-Western Publishing Co.—a must for anyone with a microcomputer. They're perfect for giving and receiving. And for learning that will last the whole year long!

You can make keyboarding easy with **KEYBOARDING ALPHA-PAC**. This user-friendly program will teach you the keyboard letters one step at a time, at your own pace. Through the use of animated graphics, it shows you which fingers should strike which keys and the correct way to position your hands over the keyboard. The 2-diskette program is available for Apple® IIe, Apple® IIc, IBM PC, and TRS-80™ microcomputers.

Put your microcomputer to work for you with **THE LETTER EDITOR!** In just 4 easy lessons, this program instructs you on the use of the following commands: enter, browse, change, delete, edit, file, help, insert, justify, load, print, replace, set, move, and save. With these newly acquired commands, you will be able to key in and edit all kinds of reports, essays, term papers, and school assignments. Available for Apple® IIe and TRS-80™ microcomputers.

Give quality educational software. Because education is worth it. Fill out the order form below and return it TODAY!

ORDER FORM

Please send me _____ **KEYBOARDING ALPHA-PAC** diskette package(s) for the following: Apple® IIe or Apple® IIc, 64K minimum TRS-80™ Model III or 4, 48K minimum IBM-PC, DOS-1.1, 64K minimum 2.1 or 2.0-128K and _____ **THE LETTER EDITOR** diskette package(s) for the following hardware: TRS-80™ Model III or 4, 48K minimum Apple® IIe, 64K minimum

NAME _____
ADDRESS _____
CITY _____ STATE _____ ZIP _____
PHONE # () _____

- I have enclosed \$39.95 for each **KEYBOARDING ALPHA-PAC** package ordered, plus \$1.50 per item for postage and handling (check or money order*).
- I have enclosed \$29.95 for each **LETTER EDITOR** package ordered, plus \$1.50 per item for postage and handling (check or money order*).
- Please bill to my MasterCard Please bill to my VISA

CARD NO. _____

How smart are you?

Take this 15 second
trivia quiz and see how
smart you really are.

Begin.

Time's up.

Wish you'd done better? Had you been playing *The Trivia Arcade*™ from Screenplay, you might have breezed through this test. *The Trivia Arcade* is a brain-wracking game for one to four players that taxes your recall and tests your reflexes.

Snag a symbol representing Sports, Science, Music, TV or General Knowledge. From a reserve of over 3500, a randomly selected question will be displayed. Correct responses advance you toward the Winner's Circle, a place to gloat over your breadth of knowledge.

And when you've mastered your first set of questions, the *Question Pack I* is available with 4000 more challenging questions in Literature, History, Movies, Comics and General Knowledge.

Answers (No peeking!)
1. Paul Michael Glaser 2. Homicide
Hank Armstrong 3. 22 feet 4. Phloem
5. ITT

Both *The Trivia Arcade* and *The Trivia Arcade Question Pack I* are available on disk for Apple II™ series and Macintosh™, Atari™, Commodore 64™, and IBM PC™ and PCjr™.

See your local dealer or call (800) 334-5470. In Canada call Beamscope—Canada (800) 268-5535.

A computerized instructional system so advanced it'll actually teach your kids $2+2=4$.

At Screenplay™ we use a high level of computerized sophistication to reduce the complexities of math to child's play.

Playful Professor™ makes a game out of learning addition, subtraction, division and multiplication. After a correct answer, players are rewarded by moving closer to the golden key inside the castle. Whoever escapes from the castle by unlocking the door is the winner.

After an incorrect answer our professor uses chalk and a blackboard to work the problem through.

Step by step, he gives

The Professor works an incorrect answer through step by step so your kids can easily follow along.

a simple explanation to every problem from adding one-digit numbers to working

The Professor uses colorful graphics to provide children with an identifiable illustration to convey an abstract idea.

with fractions. There are also drills your children can do at their own speed.

Because the professor can advance through higher skill levels as your children's math ability improves, *Playful Professor*™

will help them with the math taught in all grades of elementary school.

You can enjoy *Playful Professor*™ with your family too. There are several different skill levels so you can participate at a harder level than your children while spending productive, quality time with them.

After each correct answer a player moves closer to capturing the key from the ghost and leaving the castle a winner.

Playful Professor™ from Screenplay™

If you're trying to figure out the best way to teach your kids math, the answer is as simple as $2+2=4$.

ANNOUNCING

FAMILY COMPUTING'S 1ST

"COMPUTING FAMILY OF THE YEAR" CONTEST

OTHER PRIZES:

First Prize: A complete computer system.
Second Prize: A printer. **Third Prize:** A monitor.
Fourth Prize: Awards worth \$250 each—including modems, graphics tablets, joysticks, light pens, software, books, disks, and computer accessories.

We're launching a nationwide search for the "Computing Family of the Year." Your family could be the *winner!* You could be featured in the pages of FAMILY COMPUTING, plus enjoy a fun-filled trip to a luxurious Club Med resort!! (One that has computers, of course!) Or, you could win a new, complete computer system, useful peripherals for your computer, or lots of exciting, useful software for your home!!

Who's eligible? Any family that uses its computer in especially efficient, rewarding, or creative ways! You could enter your family, your neighbor, your best friend, your teacher, or even your Little League coach! Write and tell us who you nominate for our "Computing Family of the Year."

All you have to do is follow the contest rules and answer the questions below:

1. Describe the most efficient, rewarding, and/or creative ways the family uses its computer. If software is used, tell us which kinds.
2. Explain the ways each family member uses the computer. List their names and ages.
3. Does the family ever use the computer together? To do what?

GRAND PRIZE:

An exotic family getaway to a **CLUB MED** resort with computer facility

4. When and why did the family decide to buy a computer? What kind of computer did the family buy?
 5. Has the computer lived up to its original expectations? Has its use evolved with time?
 6. In what ways has the computer most benefited the family?
 7. Do the children use a computer in school? Is the computer at home used for educational purposes? If so, how?
- Also, we'd love to see a family photo—computing, of course. (A casual snapshot will do.)

CONTEST RULES:

1. You must submit at least 1,000 words, but not more than 2,000. Send typed manuscripts or computer printouts, if possible.
2. Scholastic Inc. employees and advisory-board members, and members of their families, are not eligible.
3. All entries and photographs become the property of Scholastic Inc., which reserves the right to use them in publications and promotions. Unfortunately, Scholastic Inc. will not be

able to acknowledge your entries. Entries and photographs will not be returned.

4. You must include your address and phone number (and if you are nominating another family, you must also include its address and phone number).

5. A maximum of four family members are eligible for the Club Med vacation.

6. No cash substitutions for prizes.

HOW TO ENTER:

Nominating letters should be mailed to Suzette Harvey, "Computing Family of the Year Contest," FAMILY COMPUTING, Scholastic Inc., 730 Broadway, New York, NY 10003.

Judges: All entries will be judged by a panel of Scholastic employees. **Deadline:** All entries must be postmarked by March 15, 1985. **Winners:** The winners will be announced in the September 1985 issue of FAMILY COMPUTING.

COMPANIES CONTRIBUTING PRIZES: Activision, Advanced Ideas, American Educational Computer, Avant-Garde, Amdek, Arrays/Continental, Atari, Avalon Hill, BHT Group, Brady, Broderbund, Cardco, CBS, Club Med, Coleco, Commodore, Creative Software, Datamost, DesignWare, dilithium Press, Electronic Arts, Epyx, Ergo Systems, Eric Software, First Star, Fuji, Futurehouse, Gamestar, Harper & Row, HesWare, Human Edge, Imagic, Infocom, Koala, The Learning Co., Maxell, Maximus, MECA, Micro Lab, Microsoft Press, Mindscape, Monogram/Tronix, Okidata, Peachtree Software, Penguin, Personal Peripherals, Prentice-Hall, Random House, Recoton, Reston, Howard W. Sams, Scarborough, Scholastic Software, Screenplay, Smith-Corona, Springboard, Star Micronics, sub-LOGIC Communications, Suncom, Synapse, Taxan, Woodbury.

Void where prohibited.

Finally, a Computer Keyboard Kids Can Use

A computer can help your child learn, but the keyboard often gets in the way. It's a jumble of keys that's confusing and hard for little fingers to operate. And it's not much fun.

Introducing Muppet Learning Keys™ from Koala Technologies™

It's the first computer keyboard made especially for young children. Unlike regular computer keyboards, all the letters and numbers are in order. So a child can find A-B-C and 1-2-3 without hunting all over the keyboard. And with Muppet Learning Keys software, learning letters and numbers becomes fun.

From the Experts

Muppet Learning Keys was created by education specialists to make learning exciting for your child. It's the first computer keyboard with Kermit, Miss Piggy and the whole Muppet gang right on it, ready to introduce your children to the magic of letters, numbers and colors.

© Henson Associates, Inc., 1984

Kid Stuff

Muppet Learning Keys has things that every child knows and loves:

- A paint box with eight touchable colors
- A blackboard with the ABC's in order
- A ruler with the numbers where they're supposed to be
- And keys the right size for small fingers

Press any key and something always happens. Press K and Kermit flies his

kites. Press 6 and six kites appear. Touch a button on the paint box and leave a colorful impression.

Muppet Learning Keys—for a child's hands, a child's mind and a child's heart. Give your child Muppet Learning Keys and make computer learning child's play.

Muppet Learning Keys. The Hands-on Keyboard for Kids.

For the Apple® IIe and IIc, Atari® and Commodore 64™ computers. In-Box software by Sunburst Communications. Muppet Learning Keys works with software that is designed or adapted for it.

Apple and Atari are registered trademarks of Apple Computers, Inc., and Atari, respectively. Commodore 64 is a trademark of Commodore Business Machines, Inc. Muppet Learning Keys, Muppet and character names are trademarks of Henson Associates, Inc.

If you have an Apple, change line 20 to read
20 WL=40:PI=13:TRU=1:TX=1:dL=100:TAS=""

Commodore 64/By Invitation Only

Use the base version, with the following alterations:
Change CLS to PRINT CL\$; in lines 170, 270, 310, 510, and
550. Add lines 30, 40, and 620:

EXPERIENCE COUNTS.

Introducing
NEW software from
Weekly Reader -
 education experts
 for over 55 years!

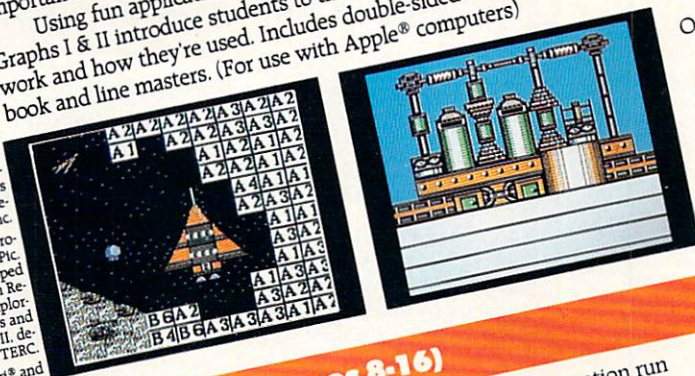

Exploring Tables and Graphs Level I (ages 7-10)
 Level II (ages 10 and up)

Stickybear™ Early Learning (ages 3-6)

Now the publishers of *Weekly Reader* have turned their best-selling classroom skills program into software for home use. Here's an opportunity for boys and girls to master vital skills so important in today's data-hungry world. Using fun applications and games, *Exploring Tables & Graphs I & II* introduce students to the way tables and graphs work and how they're used. Includes double-sided disk, guide-book and line masters. (For use with Apple® computers)

Beginning learners catch on to important basics fast with delightful software created by Richard Heffer, author and illustrator of over 100 children's books!
 Recognizing shapes, understanding opposites, counting skills, learning the alphabet...it's easy and lots of fun. Kids love the vibrant, rainbow colors and animation. Each program includes a hardcover 32-page book, poster and stickers. (For use with Apple, Atari, and Commodore 64 computers.)
 Look for our software in finer computer stores everywhere. Or call toll-free 800-852-5000. Dept. AJ6.

Stickybear and Pic Builder are registered trademarks of Optimum Resource, Inc. Stickybear programs and Pic Builder developed by Optimum Resource, Inc. Exploring Tables and Graphs I and II, developed by TERC. Apple®, Atari® and Commodore 64 are registered trademarks of Apple, Inc., Atari, Inc. and Commodore Electronics Ltd., respectively.

Pic. Builder™ (ages 8-16)

A unique software picture-building kit that lets imagination run wild while developing important computer skills. Kids can start with the 40 build-by-number pictures on the disk...then go on to create their own pictures! Endless possibilities. Includes 8 separate palettes of 48 building blocks each. (For use with Apple and Atari® computers. Available soon for Commodore 64 computers.)

PRINTER ACCESSORIES FROM

DIGITAL DEVICES 

U•PRINT 

PARALLEL PRINTER INTERFACE

Expand your Atari® or Commodore® computer with Digital Devices **U•PRINT**. We make it simple to add any printer you choose. **U•PRINT** interfaces feature industry standard Centronics parallel connectors to hook up an Epson, Star, NEC, C.Itoh, Okidata, or any other printer.

U•PRINT MODEL A

- EXTRA SERIAL PORT FOR DAISY CHAINING OTHER PERIPHERALS.
- COMPATIBLE WITH ALL ATARI HARDWARE AND SOFTWARE.

U•PRINT MODEL C

- EMULATION OF COMMODORE PRINTERS, INCLUDING GRAPHICS.
- COMPATIBLE WITH ALL COMMODORE HARDWARE AND SOFTWARE.

Compact, easy to install, and costing only \$89.95, **U•PRINT** gives you a choice!

PRINTER BUFFER 

CENTRONICS PARALLEL INTERFACE

The **PRINTER BUFFER** is the low-cost way to make your computer even faster! The **PRINTER BUFFER** takes information from your computer at high speed, stores it in memory and then retransmits it at the slower speeds a printer requires. Your computer is quickly free from the task of printing so you can do other things without waiting. With **PRINTER BUFFER** you can print and process *simultaneously*.

call TOLL FREE (800) 554-4898 for more information on these peripherals from

SOLUTION TO LAST MONTH'S PUZZLE

The object that James failed to take into consideration was the mirror. Lynette Leighton forgot to tell her protégé that Photograph No. 3 was taken in the mirror (pictured on the wall of Photograph No. 2), so the hands on the clock are reversed. The clock reads 2:49 p.m., although the time was actually 9:11 a.m.

\$99.95

STAY TUNNNED

Being #1 gives you the advantage of surprise. Take our latest surprise, the Taxan Model 305 TV Tuner. It turns your color composite monitor into a TV set without leaving your chair, or the room! Just flick the switch and go from word processing to world politics. From video games to Homework. Or from computer dating to the Soaps!

Even #2 doesn't have one of these! And the price is a cool \$99.95.

Where can you find a color TV at that price? Or a better picture than the television you have now! No Where!

So, if you're tired of waiting for #2.

Try #1.

You'll be pleasantly surprised.

TAXAN

18005 Courtney Ct. City of Industry, CA 91748

WHAT'S IN STORE SOFTWARE GUIDE

QUICK TAKES ON SOFTWARE— NEW AND NOTEWORTHY

Welcome to FAMILY COMPUTING's Software Guide, the most comprehensive listing available of two dozen of the newest, most noteworthy and/or best programs on the market. Our reviewers include families from all over the country who have judged the software according to the following criteria: long-term benefits and applications, adaptability, and advantages of using a computer for a given task. Programs have been evaluated and rated for their performance in each of the categories listed below. More detailed reviews of some programs follow the chart.

Here's a rundown of the ratings categories and what they mean: **●** = Overall performance, given the limita-

tions and capacities of the particular computer for which the software is intended. **D** = Documentation, or the instructions and literature that accompany a program. **EH** = Error-handling, the software's capacity to accommodate errors made by the user—an especially important consideration with software for younger users. **PS** = Play system, in the games reviews, the quality of the game design and the game's playability. **GQ** = Graphics quality, also evaluated in light of each particular brand's graphics capabilities. **EU** = Ease of use after the initial learning period, which varies from computer to computer. **V** = Value for money, or how the software measures up to its price.

Inside every kid there are great adventures to be told.

With Playwriter™ and your computer, now you can write your own great adventure books.

Write the adventures you've always dreamed of. And turn those dreams into illustrated books, with Playwriter Software from Woodbury.

Playwriter is the first software package that lets you write, edit, illustrate, print and bind your own books using your IBM, Commodore 64, or Apple home computer.

Live the adventure as you write it

You can travel through space and time. And go where no one has gone before—to the center of your imagination. Because Playwriter helps you create the heroes, villains and other characters in your story and lets you decide every twist and turn of the plot.

Playwriter guides you through the creative process by asking you questions about the story you want to write.

Playwriter responds to everything you tell it. And you'll see your answers turn into action as the story develops.

Built-in word processor

Playwriter's simple-to-use word processor lets you go back to fix or change any part of the story you like.

Next, just print out the story and put the book together using the hardcover jacket, colorful stickers, and full page illustrations included in each package.

When you're finished, you'll have a real book including a title page, dedication page and a page all about the author, you!

Use it again

With Playwriter you can create a whole library of books written by you. Best of all, you'll have hours of fun long after the computer is shut off.

Apple, Commodore and IBM are all registered trademarks.

For personal computers that
have been very, very good this year...

Fun and games from IBM.

Just in time for the holidays, IBM presents a batch of entertaining software programs for every IBM personal computer (and every IBM personal computer person) on your gift list.

If it's pure fun and games you're after, or educational programs cleverly disguised as fun and games, you've come to the right ad. (If, on the other hand, your only interest is a spreadsheet or database manager, just remember what they say about all work and no play.)

Except for IBM PCjr ColorPaint, all the programs here cost less than \$50.* And all are available through IBM Product Centers and authorized IBM Personal Computer dealers. For the location of the store nearest you, just call 1-800-447-4700. In Alaska or Hawaii, 1-800-447-0890.

Arcade Games

Jumpman™

You have to defuse hundreds of bombs to save the Jupiter Command Center, but be careful. The bad guys are shooting live ones. Requires color display or TV, joystick optional.

Mine Shaft

You have a little problem. Floodwaters have short-circuited your robot miners, and now they're running berserk. PCjr only. Requires color display or TV, joystick optional.

SHAMUS™

Find and eliminate the evil Shadow. 128 rooms and all manner of ill-mannered creatures stand between you and your goal. Requires color display or TV, joystick optional.

Crossfire

The streets are crawling with giant spiders. Your city is counting on you. Good luck. PCjr only. Requires color display or TV, joystick optional.

Scuba Venture

Dive for sunken treasure and live to tell about it. Maybe. PCjr only. Requires color display or TV, joystick optional.

Adventure Games

King's Quest

Save the Kingdom of Daventry from certain doom. An adventure game with advanced graphics, plus music and sound effects. PCjr only. Requires color display or TV.

Zyll

Explore the castle of a wicked sorcerer as a warrior, a wizard or a thief. A text adventure game for 1 or 2 players.

Education Programs

Gertrude's Secrets™

Progressively challenging games that stress logical thinking. Ages 4 to 10. Requires color display or TV.

Gertrude's Puzzles™

A series of exercises to sharpen a child's powers of deductive reasoning. Ages 8 to 13. Requires color display or TV.

Rocky's Boots™

39 interrelated games that teach the basics of computer logic and circuitry. Ages 9 to adult. Requires color display or TV.

Turtle Power

A music and drawing program that introduces the fundamentals of programming with Logo turtle graphics. Preschool and up. Requires color display or TV.

Monster Math

Solve math problems and slay dragons. Or else. Requires color display or TV.

Adventures in Math

Roam through a castle and find hidden treasure. Your math skill opens the doors. Requires color display or TV.

Bumble Games™

Six colorful programs that teach children to plot number pairs, a basic math skill. Ages 4 to 10. Requires color display or TV.

Juggles' Butterfly™

Reading and math for the uninitiated. Ages 3 to 6. Requires color display or TV.

*Prices apply at IBM Product Centers.

Rocky's Boots, Gertrude's Puzzles, Gertrude's Secrets, Bumble Games, Bumble Plot and Juggles' Butterfly are trademarks of The Learning Company. Jumpman is a trademark of EPYX, Inc. SHAMUS is a trademark of SynSoft.™ Little Tramp character licensed by Bubbles, Inc., s.a.

Bumble Plot™

Geometry made fun. Yes, fun. Ages 8 to 13. Requires color display or TV.

Serious Fun

PC Pool Challenges

If you don't have room for a pool table, this is the next-best thing. 1 to 4 players. Requires color display or TV.

Touchdown Football

Realistic football action. Call your own plays against an opponent or the computer as the crowd cheers you on. PCjr only. Requires either color display or TV, and joystick.

Trivia 101: The Introductory Course

5,000 trivial questions in more than 200 trivial categories. Up to 14 players (or teams) compete against each other and the clock. Requires color display or TV.

TV and Cinema 101: Trivia from Talkies to Trekkies

"What was the name of Pancho's horse on The Cisco Kid?" and 4,999 other infuriating questions. Requires color display or TV.

Casino Games

Try your luck at blackjack, poker or the slot machines with \$500 in "computer" chips. 1 to 4 players. Requires color display or TV.

Strategy Games

Computer versions of four popular board games: Checkers, Elusion, Battleship and Reversi. 1 or 2 players. Requires color display or TV.

Graphics Programs

IBM PCjr ColorPaint

A program that helps you draw just about anything you can think (including the Christmas tree pictured below) in living, sparkling color. Very sophisticated, but very easy to use. PCjr only. Requires color display and mouse.

Animation Creation

Create colorful moving pictures on your computer. No knowledge of programming necessary. Requires color display or TV.

Personal Computer Software

This is NOT a simulated picture.
It's a real, live picture created
with PCjr ColorPaint (see
"Graphics Programs" above).

SOFTWARE REVIEWS

On the following pages, you'll find in-depth reviews of some of the programs listed in the Software Guide. Refer back to the Guide on page 118 for information such as backup policies and addresses of software manufacturers.

HOME BUSINESS/ HOME MANAGEMENT

Home Pak

HARDWARE REQUIREMENTS: Atari Home Computers, 48K (disk). Also for Commodore 64. Versions planned for Apple II series, Macintosh, and IBM PCjr. Modem for telecommunications.
MANUFACTURER: Batteries Included
PRICE: \$49.95

Hooking your computer up to others via your telephone, getting the latest news and stock reports, transmitting letters "on-line" in an instant, connecting to a huge bank of information—this is the world of telecommunications. Sometimes it can be as intimidating as it is rewarding. *Home Pak* contains a telecommunications program, also known as a terminal program, that should help enormously. The word-processor and data-management (electronic file) system also included make for one of the finest values on the market.

"Hometerm," the terminal program, lets you select most operations from a list of functions. You get an on-screen clock (to tell you how much time and money you've spent on-line) as well as the ability to record and automatically dial frequently used services. This package lets you download information and programs from other computers.

Teleconferences (conversations held between two or more computers) are usually plagued with interruptions that sometimes make coherent exchanges difficult. To help streamline this process, "Hometerm" includes a little edit window in which you can type sentences before actually entering them on-line.

After you've "retrieved" an article or message using your modem, you can transfer it easily to the word processor, "Hometext." This versatile program lets you underline or bold-face. You can justify right margins and preview your work to see how it will look before you send it through the printer.

As if this isn't enough, the pack-

age has an innovative filing system, "Homefind," to help you store data—the kind of information you'd use from day to day, such as birth dates, phone numbers, and things to do.

As a breed, data bases are rigidly structured. But using "Homefind" is a little bit like talking to a friend. You teach the computer what you want it to know by entering information in English sentences. If you wanted to enter appointments in a calendar for December 8, for instance, you'd type 12/8'S 5:PM'S DENTIST, or 12/8'S 3:PM'S WEDDING. Retrieve the information by typing for example, WHAT'S 12/8'S 5:PM, or DENTIST, or 12/8.

This three-in-one package is a bargain and could take care of many of your computing needs. —JOE GELMAN

PractiCalc II

HARDWARE REQUIREMENTS: Apple II plus/IIe/IIc, 48K (disk).
MANUFACTURER: Practicorp
PRICE: \$69.95

Anyone who's gone through a supply of pencils and erasers in the process of planning out the affairs of a small business will appreciate the advantages of using *PractiCalc II*. It's an "electronic spreadsheet"—fast, versatile, and cheap enough to deserve a place in many homes or small businesses.

Spreadsheet programs are like computerized ledger books—vast blank pages onto which you can enter numbers and labels, calculating and recalculating numerical data automatically according to formulae you've entered yourself. With a range of up to 250 horizontal rows and 100 vertical columns, and the ability to perform 23 different math functions, *PractiCalc II* can handle a budget, checkbook, payroll, or almost any other number-crunching task you may require.

The program lets you sort data either alphabetically or numerically, and list accounts either from highest to lowest amounts paid, or alphabetically by title. Or, you can automatically search for an entry without having to move across countless rows and columns.

With a thorough, clear set of instructions, including a tutorial, reference guide, and addendum describing its word-processing and data-base-management functions, you should be reasonably comfortable with *PractiCalc II* within a short time.

The only hitch I encountered was

the program's failure to automatically SAVE work before printing it out. Remember to do so yourself, unless you want your hours of data-entry to go up in smoke when your printer hangs up.

Numerous spreadsheets cost more than *PractiCalc II*, but for ordinary small-business use, feature for feature, few can match it.

—JOHN LINCOLN

Your Personal Net Worth

HARDWARE REQUIREMENTS: Commodore 64 (disk). Also for Apple II series; Atari Home Computers; IBM PC/PCjr.
MANUFACTURER: Scarborough Systems
PRICE: \$79.95

Who can resist examining a program that displays a real silver dollar on the cover? As if this flashy "instant rebate" weren't enough, the publishers of *Your Personal Net Worth (PNW)* have included a handy book on budget-keeping and money management (96 pages, specially excerpted from Sylvia Porter's *New Money Book for the 80s*), along with the program disk, accompanying instruction manual. But what about the program itself? Not wanting to "judge a book by its cover" I vowed to give this package a very thorough testing.

My investigations showed that this comprehensive package is much more than a method of adding up one's accumulated financial worth, as its title might imply. It's an extremely flexible home-budgeting and accounting program, with a well-written manual that explains simple accounting principles for the uninitiated, in addition to providing a step-by-step tutorial for setting up and using the program. *PNW* accommodates up to 420 (the IBM version has 350) different accounts (spending and income categories). You select tasks from a list or "menu" of operations. You don't have to remember complicated command sequences (as in some programs of this type). Help comes in the form of comprehensive HELP screens—no further away than a keystroke—if you're in doubt about what to do next. No computer experience is necessary to run *PNW* other than a basic familiarity with your equipment and operating system. The program, manual, and Sylvia Porter book's include all the information and advice needed to organize and set up a budget, if you have never done it before.

TEST DRIVE AN ELEPHANT.™

Elephant Floppy Disks are the perfect vehicle for storing and protecting data. Because Elephant never forgets. You'll get high performance that's 100% guaranteed for a lifetime of heavy use. So take them for a test drive. They're available now at your local computer showroom. And there's no waiting for delivery. For the Elephant dealer nearest you, call 1-800-343-8413. In Massachusetts, call collect (617) 769-8150.

Dennison

ELEPHANT™ NEVER FORGETS.

To protect the rest

- against the frustration of incorrect data output and damage to software disks

- against surge damage to your computer, monitor, T.V. and disk drive

- against lost time due to unexpected data loss and "crashing" systems

Special features of the BN Models include a Master ON-OFF switch, suppressor indicator light and a "press-to-reset" circuit breaker. Decorator beige unit mounts on wall or under desk.

...get the best.

All of these unexpected problems can be caused by brief but intense surges on the power lines that carry electricity to your outlet. Unfortunately, severe surges can melt the electronic components in your computer. Plug into a Brooks Surge Stopper. It controls the flow of power to your equipment and dissipates harmful surges. Your worries are eliminated and your satisfaction is guaranteed by our **5 year unconditional warranty.**

SOFTWARE REVIEWS

It was a bit daunting to see where all that money was going (much too much seemed to be "personal" and "entertainment" expenses at our house), but it was encouraging to see how much my income had been contributing to our NET WORTH. With PNW, it was all there in blue and white to show my husband that although my income as a professional writer isn't always regular, it almost matches his! Any banker is sure to be impressed with a printout from this program if we were to apply for a loan. And naturally, it will be indispensable at tax time.

PNW provides a data disk with a sample chart of accounts. When you add your own, the program allows them to be added to or eliminated, descriptions updated, or revisions made. The routine for formatting new disks has a strange quirk in that it names your disk with the title of the last disk it accessed (often the sample disk—called "Your Data Disk"), but this doesn't seem to affect the working of the program. When you enter expenses, the program automatically remembers the date and keeps a check counter, anticipating redundant data entry. It allows you to report income from many different sources, a large plus in my case since I did not want to lump my income from different publishers under one heading: BETSY'S INCOME, as I had been forced to do with other programs of this sort. PNW allows me to print in a 40-column format any of the information that appears on the screen. It also has a routine for printing out checks each month (or at any time) to pay bills.

Budgeting and finance-managing are time-consuming processes, regardless of whether or not you do them on the computer. But the order this program can lend to finances otherwise in a state of disarray, and the control you'll be able to exert over a formerly chaotic situation, could make it well worth that expense of a little extra time.

—BETSY BYRNE

EDUCATION/ FUN LEARNING

Agent USA

HARDWARE REQUIREMENTS: Commodore 64 (disk). Also for Apple II series; Atari Home Computers; IBM PC/PCjr. Joystick optional.

Give your children more than the advantage of a computer. Give them the Scholastic Advantage.

You probably realize the computer is only the first step. Now you need Scholastic Software to turn it into both a powerful and entertaining learning tool for your child.

Scholastic Software is the only software that comes with the Scholastic Advantage. This means software which uses your child's own natural curiosity and love of adventure to make learning valuable skills fun. Software based on what your child is actually studying in school, which makes it relevant and practical. And software which is already being used successfully by millions of kids in schools around the country.

At Scholastic, we've put everything we've discovered about how youngsters learn into our new software line. It's the result of over 60 years' experience making

learning both challenging and fun. In fact, you probably grew up reading Scholastic books and magazines in school. Nobody else knows kids like we do and it shows in our new family of products. That's the Scholastic Advantage.

Our software family includes *Agent U.S.A.*, which turns geography into an exciting adventure trip around the country; *Story Maker*, a program that helps kids create their own illustrated story book, and *Math Man*, an action game that makes learning math fun. *Microzine* is America's most popular classroom software, featuring four fun learning programs on one disk. *Story Tree* is both a creative writing tool and a word processor, and *Operation: Frog* is a fascinating simulation of a biology lab.

So give the Scholastic Advantage. You'll be surprised how fast the computer becomes one of your child's favorite—and most exciting—teachers.

Agent U.S.A. available in Apple, Atari, Commodore and IBM. *Story Maker* and *Microzine* available in Apple. *Math Man* and *Story Tree* available in Apple and IBM. *Operation: Frog* available in Apple and Commodore. *Spelldiver* available in Apple, Atari and Commodore.

Clip this and save \$5.00 on any purchase of Scholastic Software!

Not a store coupon. Redeem by attaching dated cash register receipt and warranty card. Send to: Scholastic Software, Dept. C.M., 730 Broadway, New York, NY 10003.

WHAT'S IN STORE SOFTWARE REVIEWS

MANUFACTURER: Scholastic
PRICE: \$29.95 (Atari, C 64); \$39.95 (Apple, IBM)

You're a secret agent whose job is to destroy the evil Fuzzbomb—a creature that's turning everyone in the U.S. into fuzzbodies. At the information booth located in each state capi-

tal, you can find out the Fuzzbomb's location, which cities have been "fuzzed," and which may be next.

You're now in Las Vegas, Nevada, but where's the information booth? Wait—the map in your instruction kit says that Carson City, not Las Vegas, is Nevada's capital. You'll have to catch the next Carson City-bound train. The ticket booth schedule indicates that trains leave regularly for Carson City, Phoenix, and other cities nearby. With three minutes to spare, you'll have time to grow some antifuzz crystals, crucial to overcoming the Fuzzbomb. You need to multiply your initial stock of 10 to over a 100 to eliminate the marauder.

This is Scholastic's flawlessly crafted *Agent USA*, a terrific way to have fun while learning what's where in the U.S.A. Printed and on-screen maps show major cities and state capitals. And each city has different topographical details. San Francisco has its bay, Denver its mountains. Big cities boast fast trains to faraway cities. Smaller cities have smaller local connections.

The 9- to 13-year-olds who tried this program out for size at our house loved it, playing nonstop for three days. They liked the game's realistic details, the way time changed as it would en route between cities, even readjusting for travel across time zones. The jazzy music that accompanied their travels added to the fun (and drove me crazy after a while).

Don't expect to beat this game easily, though. Three of our children

gave up after several days' worth of pursuit, frustrated by their inability to subdue the Fuzzbomb. My 9-year-old, however, plays on, determined to save the U.S.A., and is learning a lot about the nation's geography in the process. —TAN SUMMERS

Cell Defense

HARDWARE REQUIREMENTS: Commodore 64 (disk). Also for Apple II series. Joystick.

MANUFACTURER: HesWare
PRICE: \$29.95 (Commodore); \$34.95 (Apple)

Every now and then a program comes along that gives a glimpse of the educational potential of computers at home. *Cell Defense* is such a program. A highly stimulating, visually exciting game, it attempts to teach how the immune system fights off viral infection.

A virus has attacked an organism and you must combat the foreign agent. You use the joystick and one of several different mechanisms at the body's disposal. An on-screen scanner monitors the status of your cells, the degree of infection, and how many have been damaged or destroyed. Scheme up a strategy for controlling the virus: Do you want to deploy interferon to prevent further infection? Or will you use B-Cell antibodies in the bloodstream to halt the disease's spread to the committed T-Cells and Labile Cells?

As you can imagine, you'd have trouble *not* learning a thing or two from this program. My kids were engrossed. They found it more inviting and playable than many of the other

educational programs they've tried. By allowing the player to adjust a number of beginning play variables, such as the initial health of the organism and the number of the organism's cell layers, *Cell Defense* lets players experiment with difficult strategies and learn even more. →

Help Agent U.S.A. stop the fuzz plague. And you can win a trip to Washington, D.C.

The FuzzBomb is turning millions of men, women and children into mindless fuzzbodies. And Agent U.S.A. can't stop the devious plague spreader without your help.

But don't accept the assignment unless you're really prepared to stretch your mind. Because sharp eyes and quick reflexes aren't enough to stop the fuzz plague. You'll have to outthink and outplan the FuzzBomb as you pursue him around the country in super-fast rocket trains. And you'll have to remember state capitals, learn the time zones and figure out the quickest routes across the nation. If you don't, the fuzzbodies will turn you into one of them.

Become one of the few super-agents to defeat the FuzzBomb and you may win a trip to intelligence headquarters in Washington, D.C. What's more, even if you never catch the evil one, tell us what you like about the game and you can become an instant winner of an Agent U.S.A. knapsack (see package for contest details).

Agent U.S.A. needs you now. So sign up where you usually buy your software. Or write to Scholastic Inc., Dept. EW, 730 Broadway, New York, NY 10003.

Do it before the fuzz plague comes to your neighborhood!

SOFTWARE REVIEWS

A small problem lies in the fact that, though integral components of the immune system, antigens are not mentioned or included in the game. Still, in spite of this omission, because of its entertaining use of play to introduce an otherwise intimidating and complex subject, I highly recommend *Cell Defense*.

—KENNETH WILDMAN

The Grammar Examiner

HARDWARE REQUIREMENTS: Apple II series, 48K (disk). Also for Commodore 64; IBM PC/PCjr. Joystick.
MANUFACTURER: DesignWare
PRICE: \$44.95

TUESDAYS ELECTION WILL BE HOLD AGAIN BECAUSE VOTERS ALL MARK 'NONE OF THE ABOVE' ON THEIR BALLOTS. THE COUNTY CLERK IS TRYING TO FIND OUT HOW THE BALLOT'S GOT MIX UP WITH A SET OF EIGHTH GRADE HISTORY TESTS.

As an aspiring journalist, your task is to proofread this passage. If you can correct every error, your salary will be increased to \$23,000, and you'll have a shot at being promoted to editor-in-chief and winning the game. If you make errors, you win fewer bucks and may have to wait longer to be eligible for promotion.

The Grammar Examiner combines skill and luck in an entertaining package that teaches writing and editing skills. You, and up to three other players, embark on a journalism career with an initial salary of \$20,000. As you move around the game board, the various squares you land on affect your salary. Some squares automatically up it by a modest amount. Other squares require that you select the correct sentence from a choice of two (for instance: SOME OF THE GLUE IS MISSING. OR SOME OF THE GLUE ARE MISSING). Still other squares ask you to proofread an entire package, such as the election story above.

The combination of skill and luck makes for an exciting challenge. You

Show us the face of Max the Master Robot. And you may win your own talking robot.

Team up with a friend to defeat Max and his robot raiders in Bannercatch.

Only a handful of people have ever seen the face of the robot leader Max. Defeat Max and his demon robots and you'll join this elite group. And you and your teammate can win two walking, talking robots you can program yourself.

You'll battle Max and his robot marauders in a field bigger than any you've ever seen. Your team must invade robot territory and grab their flag before they take yours. But be careful; Max has devised a fiendish strategy against you. And, of course, you can't expect mercy from robots.

To make things even tougher, Max has taken a vow not to reveal his face until you conquer all his robots. Including Zweli the Invisible.

You'll need to learn binary numbers, map reading and, above all, how to work with your teammate if you want to win. But even if you go down to defeat, you may win two tickets to your favorite local sports event. See the package for contest details.

You can pick up Bannercatch where you buy software. Or write to Scholastic Inc., Dept. EW, 730 Broadway, New York, NY 10003.

But please remember, only a handful of people have gone face-to-face against Max and survived.

Introducing The New Standguard— A Computer Keyboard Cover And Bookstand In One

Made of K-resin plastic, its solid nature serves a dual purpose. As a computer keyboard cover, it protects the keyboard from dust, liquids and accidental pressure thereby insuring a long, trouble-free life for your computer. As a book-stand, its one inch wide lip allows for the placement of books and papers holding them at eye level for easier reading. The Standguard has an attractive smoked color, is shatter resistant and because of its non-magnetic, non-conductive nature, will not disturb magnetic disks or tapes.

The Standguard measures 16 1/4" wide and 9" deep. It is made to accommodate most personal computers such as: the Atari 800, 600 XL, 800 XL, 1200 XL, the Apple II, II Plus, II E and the Commodore 64 and Vic-20. And the cost is only \$18.95 (includes shipping and handling).

To order, simply specify quantity and mail a check or money order to:

DMI Products Co.
740 Colfax Avenue
Kenilworth, N.J. 07033
201-241-1471

also have the option of playing alone against a computer with a variety of skill levels. Being able to design your own game boards and create your own stories and error-laden passages lets you tailor the game to players of any age and skill.

Our kids noticed that sentences and test passages frequently repeated themselves—a bit of a drawback. For this reason, they appreciated being able to modify the game and create their own materials. Overall, they found *Grammar Examiner* a delightful way to practice writing while having fun.

—TONY MORRIS

Mission: Algebra

HARDWARE REQUIREMENTS: Apple II series, 48K (disk). Also for Commodore 64, IBM PC/PCjr. Joystick.

MANUFACTURER: DesignWare

PRICE: \$44.95

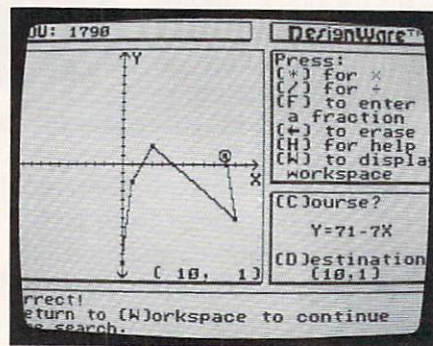

Can you simplify this equation?

$$4(Y+1)+4=8X-40$$

Would you recognize the line that corresponds to it, if it were plotted on a graph? *Mission: Algebra* is a unique and creative program that helps students tackle the tough elements of linear algebra.

Your task is to find a crippled spaceship by tracing its path using equations that must be simplified and plotted on a graph. First, you must simplify each equation step by step. The computer accepts only correct steps in the simplification process. If you run into trouble along the way, the computer will suggest an appropriate method to proceed.

You'll eventually arrive at the equation in its fully simplified, graphable form: $Y=2X-12$, in the above example. But the crippled ship follows this path only to the point where $X=-6$. Determine the value of Y at that

point so the on-board course plotter can draw a line to that point. The equation for the next leg of the journey appears, and you repeat the pro-

cess until you find the ship.

Mission: Algebra teaches a complex subject in a simple, entertaining way. Our kids enjoyed the search once they got the hang of it. Their primary criticism lay with the time it took to complete each leg of the ship's journey. Some complex patterns took almost an hour to solve completely. Thus, while it is not likely to appeal for long to game-playing members of the family, it's excellent as a practice for high-school kids having trouble with linear algebra.

There are 40 different paths on the disk. Some are easier, some are more difficult. And, as in all DesignWare programs, you can make up your own. Simply draw the line—the computer will calculate corresponding equations.

—TONY MORRIS

Movie Musical Madness

HARDWARE REQUIREMENTS: Atari Home Computers, 16K (cartridge); 48K (cassette). Also for Commodore 64, Joystick.

MANUFACTURER: CBS Software
PRICE: \$32.95 (Atari cassette, C 64 disk); \$37.95 (Atari and C 64 cartridge)

Computer programs don't need to teach reading or math to be worthwhile. And they don't need to shoot 'em-up or blast 'em-away to be fun. *Movie Musical Madness* encourages creativity and exploration with the computer while giving your child a genuinely good time.

After choosing between a black-and-white or color movie, you're given a wide variety of props and objects with which to decorate your "movie set." Fill your screen with houses, skyscrapers, movie marquees, flowers, and trees. Add a witch, elephant, or moving phantom man for a little animation.

Choose one of a variety of different musical themes as your score—a light jazzy tune or a spooky, ominous strain. Finally, select your ac-

SOFTWARE REVIEWS

tor or actress—and action! Manipulate your star to float, strut, and jump around the screen. Create several different scenes and string them together—into your own little animated movie short.

My kids, ages 7 and 9, and I enjoyed this activity because of its simplicity. Just a little trial-and-error with the joystick and we could whip up numerous different scenes for our so-called movie. The kids let loose with their imaginations.

The activity is a bit limited by the constraints of its cartridge format. You can use only one actor at a time. Also, more props for indoor scenarios, a greater variety of positions and movements for the actors, and the ability to save their "movies" to disk would have enhanced the program's value and longevity. —RICHARD LAMB

GAMES

Archon II: ADEPT

MANUFACTURER: Electronic Arts
HARDWARE REQUIREMENTS: Atari Home Computers, 32K (disk). Also for Commodore 64. Joysticks.
PRICE: \$40

Here, just in time for Christmas and critics' "10 Best" lists, is the newest and best of the strategy/arcade game breed. *Archon II: ADEPT*, the superb "sequel" to last year's popular thinking/action game, is as exciting and innovative as its predecessor. And that's saying a lot, for at the time of *Archon's* release, it seemed as if there was little room for product improvement.

The new game features a five-area playing field, representing earth, air, fire, water, and "the void," a space largely immune to magic and difficult to attack or defend. The object is to maneuver a variety of playing pieces, some unique to one side, others available to both teams, over the field. Using the built-in powers of your pieces, you must dominate the board, eventually controlling the power points from which both sides derive their strength.

Joystick controls allow solo or two-player action. And in an improvement on the original, a handicapping system balances play so experts can take on novices and both sides can still enjoy the game. Other improvements on *Archon* include the ability to take back mistaken moves up to a certain point; the flexibility of allowing players to build teams

from scratch based on their own strengths and weaknesses as well as those of the playing pieces; and the addition of new spells which improve play balance.

But what any game comes down to in the end is fun, and *Archon II: ADEPT* meets all the requirements. Characters range from dull-witted giants who can only smash things to pieces, to singing sirens whose songs drain their opponents' strength; from invisible wraiths who sap your life-force and add it to their own, to juggernauts—fighting skateboards that bash into you at high speeds.

What a game! I'll be covering it in detail in an upcoming Games column. Suitable for ages 10 and up, 6 and up with parental supervision.

Expedition Amazon

MANUFACTURER: Penguin Software
HARDWARE REQUIREMENTS: Apple II series. Version planned for Commodore 64.
PRICE: \$34.95

We need four adventurous heroes and/or heroines for a lovely trip to South America. Who's volunteering? . . . All right, who needs the money? . . . Right, last chance, who's *brave enough* to risk life and limb for the sake of science?

Feel like being in a good, old-fashioned Hollywood serial, complete with hair-raising escapes, jungle intrigue, cardboard sets, and monsters shot with a wide-angle lens? Well, "B" movie fans, welcome to *Expedition Amazon*, where a third-of-a-dozen intrepid explorers can don their *Indiana Jones* costumes and set out to discover the fabled Lost City of Ka, rumored to be hidden somewhere in the jungly tendrils of the Amazon.

Not for the impatient, this game requires such adventuring skills as mapmaking, puzzle-solving, labyrinth-exploring, jungle-inhabitant-

fighting, piranha-evading, grenade-hurling, and frequent praying. You name four characters who make up an expedition, buy their tools (a wide selection is available, though only experience will show you which are really needed), and go off into the Amazon. Then you have to map out vast tracts of land and try to get back to base camp with enough treasure to re-equip and continue. Sounds simple, eh? Well, good luck.

You see, there are these Amazons who don't take kindly to strangers, as well as leeches, nasty crocodiles, pits filled with crawly spiders, and . . . yech, some things too horrible to mention. And that's just above ground. Wait until you try to explore

the underground labyrinths. It makes my skin creep and I'm only writing the review.

Run, don't walk, to your nearest computer software dealer and buy this game. Don't forget the calamine lotion, Off, mosquito netting, and a copy of *Staying Alive in the Amazon on 5 Bytes a Day*. This one is really fun, and very difficult to beat. Suitable for ages 12 and up, and excellent for group play.

In the Chips

MANUFACTURER: Creative Software
HARDWARE REQUIREMENTS: Commodore 64 (disk). Also for Apple II series, IBM PC/PCjr. Joystick.
PRICE: \$29.95

The most-often grumbled complaints from playtesters about financial games have centered on play length and rules complexity. I'll admit that some of the financial games I've played (like *Cartels and Cutthroats*) have been too complex for the amount of time that most audiences will put into them. Others (such as *Rails West!*) have been riveting, but also require many hours to learn and play.

EDUCATIONAL SOFTWARE SHOPPING TIP #1

It's smart to save money.

Since 1981, K-12 MicroMedia has been a leading national school supplier, specializing exclusively in educational software—and we're selective. Educator feedback, published reviews, and our own staff reviews help us to choose the best learning programs available. For top quality, service and value, it just isn't smart to shop anywhere else!

SOFTWARE REVIEWS

I am pleased to report that *In the Chips* has a short play time (1-3 hours) and is easy to learn (you can be up and playing the game in 15 minutes). This dandy simulation is as much fun as most of the more complex financial games around, and can be played solo or in a two-player mode.

You begin as the president of a small manufacturing firm. By developing, producing, advertising, and setting prices on five different hypothetical goods, you can outwit your opponent (and the rest of the market) and win the game. Optional play-balance features allow the creation of monopolies, though the real skill lies in being able to compete in a fair simulation of an open market.

A good light game for those experienced players who have a few hours for fun at the keyboard, it is also an excellent introduction to financial simulations for those who have stayed away out of fear of rules length (only two pages, here), complexity (if you

can play Monopoly you can play this), or dislike of figures (the computer does all the bookkeeping work for you). Beginners will find they're learning from their mistakes and playing better by the second game. Suitable for ages 12 and up.

Xyphus

MANUFACTURER: Penguin Software
HARDWARE REQUIREMENTS: Apple II series, 48K (disk). Version planned for Macintosh.
PRICE: \$34.95

Best known until now for text/graphic and arcade games, Penguin Software has come up with a very enjoyable variation of the *Ultima*-type role-playing adventure. Choose from a variety of character types and races, then take up to four of them on a quest through seven progressively challenging miniadventures, each a complete game in itself, and all interrelated.

Keyboard movement of your characters takes them across a scrolling map. As you travel you'll encounter and battle monsters, and discover hidden scrolls, specialized weapons, and the amulets required by your magic-users for the casting of spells. You'll also visit towns where you can heal your characters, and be raised to new experience levels to buy arms, armor, and magic spells.

Since characters achieve higher levels of strength and defenses only through combat, the game revolves around your strategy and tactics skills in fighting the many varied monsters. Most of the monsters are profiled in the game's excellent documentation. These creatures range from the meek and mild to heavy-duty life-drainers, so it's best to SAVE the program frequently throughout play. Even the most experienced players have been killed repeatedly trying to defeat these creatures.

Xyphus' most innovative feature is its realistic multiplayer movement and combat simulation. Each of up to four players can decide where to move characters, which weapon to fight with, and with whom to do battle. Thus, players have the opportunity to determine their own actions, allowing for more group interaction in deciding strategy and tactics. This is crucial in fighting some of the marauding bands which spring out at you in ambush.

Xyphus is good fun for novice adventurers as well as experienced players, ages 10 plus, and is ideal for group and family situations.

Viking Raider

MANUFACTURER: Interphase Technologies, Inc.

HARDWARE REQUIREMENTS: Commodore 64 (disk). Joystick.

PRICE: \$44.95

Here's a novel and innovative adventure game which relies on joystick control for movement, combat and

THE FIRST INTELLIGENT INVESTMENT THE IBM PC USER SHOULD MAKE.

To get the most from your IBM PC you need good software. To get anything out of your software, you need to know how to use it. The right information at the right time can make the difference between frustration and satisfaction.

INSTANT TUTOR!™ is a quick and easy learning package that runs on your IBM PC. It's one-on-one instruction; convenient, because it's there when you need it. Step-by-step instruction puts all you need to know at your fingertips.

These INSTANT TUTOR!™ courses are available at \$59.95 per course plus \$2.50 shipping and handling.* They come complete with Lesson Diskettes, INSTANT TUTOR!™ Presentation Software, and an Easy Reference Guide.

Select one course or several:

- *How to Use Your PC*
 - *Beginning Instructions for WordStar*
 - *Beginning Instructions for dBase II*
 - *Beginning Instructions for SuperCalc*
- Satisfaction Guaranteed. 10 day complete refund.

Wanted: Master of the Universe

- The job requires imagination – not programming.
- All the adventure games you ever dreamed of.
- Your story becomes a machine language adventure – automatically.
- The games are yours to trade or sell (great for schools).
- Hundreds of locations, objects & understood words possible in every game.
- For Commodore,™ IBM,™ Atari,™ Apple.™
- Authors, teachers – ask about Dialog.

Call now for details:
1-800-621-4109 In Illinois 312-470-0700

CodeWriter™

The world's leading supplier
of program design software.

7847 N. Caldwell Ave., Niles, IL 60648

Computer files – Right Now!

- “Draw” screens & enter information – the first hour.
- No programming – ever!
- Create your own file system to use, copy or even sell.
- Simple, powerful report system available
- For IBM,™ Atari,™ Commodore,™ Apple.™

Call now for details:

SOFTWARE REVIEWS

keyboard input for other communication. You're a Viking warrior, capable of many feats, yet temporarily without equipment and funds to pursue your pillaging of the known world. Your environs offer much of what you need in the way of weapons, tools, and riches. All you've got to do is find them, pick them up, and use them to achieve your humble goals.

Viking Raider advances adventure gaming another step towards more active use of the joystick. But there's still a long way to go before someone combines the action of an *Archon*-type game with the sophisticated mapping, screen-scrolling, labyrinth-exploring, and town-visiting of *Ultima*-like fantasy games and the spell-casting, character-generating abilities of a *Wizardry*-type game.

In the meantime, however, *Viking Raider* is a delightful way for would-be barbarians to hone their sea-roving skills. There's sailing (which combines the romance of the high seas with bailing out and making repairs after shipwrecks), hunting (for food as well as warm clothing), fighting (against militia, trolls, frost-giants, fire-breathing dragons, and others), treasure-hunting (for jewels, a silver chalice, amulets, pearls, and a golden key), spell-casting, eating, drinking, and even that luxury for adventurers—sleeping!

The game's chief drawbacks are the lackluster graphics and an awkward play system (my character was “trapped” in a room because of a program fault involving the joystick). But repeated play will teach gamers the program's faults and how to avoid them, and for avid adventurers, that should be enough incentive to give it a try. Not a great thrill, but a definite sign of things to come, *Viking Raider* is suitable for ages 10 and up, although younger players may need some adult supervision.

THE PRIMER / THE WORDS

The Words is a glossary of commonly used computer terms. Some are well-known English words, such as *read* and *write*, that have been incorporated into computer language and given different meanings. (Note: All italicized words in the definitions are defined in full elsewhere in the glossary.) Other terms that refer to a computer's inner workings are not often used in common speech, but are important because they are used in manufacturers' specifications and ads. Don't be awed by them. Remember the delight with which Americans took to the new NASA language over 20 years ago, when John Glenn first orbited the globe.

Access

To retrieve *data* from a storage place in the computer system. Access time is the amount of time it takes to obtain the *data*. Also refers to the action of connecting a terminal to a remote computer, as in: "I use my computer to access CompuServe."

Address

A specific location in the computer's *memory* where a piece of information is stored. Each address is identified by a number.

Bank-switching

The ability of a computer's *microprocessor* to address two *memory* banks, though not at the same time. For example, some 64K RAM computers can use bank-switching to access 128K RAM, but only 64K at a time. Bank-switching allows you to run more powerful *software*, and gives you a larger "work space" in *memory*.

BASIC

Beginner's All-purpose Symbolic Instruction

Code. A popular, easy-to-learn *programming language* widely used with microcomputers.

Baud

Bits per second. A unit of measurement that describes the rate at which *data* are transmitted from one device to another, such as computer to printer, or computer to computer.

Bit

The smallest unit of information a computer uses. A bit is either the digit "0" or "1." An "8-bit" processor ma-

nipulates *data* in clusters of 8 bits.

Board

Printed circuit board. A flat, thin, rectangular component of a computer that includes one or more layers of printed circuitry to which *chips* and other electronic parts are attached. As an add-on to an existing computer, sometimes called a card.

Boot

Derived from "bootstrap." To start or restart a computer system by *reading* instructions from a storage device into the computer's *memory*.

Buffer

A temporary storage area to hold *data* during a transfer from one part of a computer system to another. The buffer may be in the computer, in the *peripheral* device, or it may be a separate, stand-alone unit.

Bug

An error in the logic of a

computer *program* that prevents it from running properly. Bugs can cause a program to "freeze up," that is, to repeat the same operation endlessly. Finding and correcting the error is called debugging.

Bulletin board

An area, reached by dialing a remote computer system via *modem*, where you can leave or read messages electronically. Bulletin boards are usually set up on computers in people's homes, or at information services such as The Source or CompuServe.

Byte

One byte contains eight *bits*, enough to stand for one character of English, or one number. Thus, it generally takes more than one byte to make up a word. "Cat," for instance, requires three bytes.

CAI

Computer-Assisted Instruction. A term ap-

plied to a wide range of instructional *software*, including drill-and-practice, simulation, and educational games.

Chip

A small component (about the size of a child's fingernail) that contains a large amount of electronic circuitry. Chips are the building blocks of a computer and perform various functions, such as doing arithmetic, serving as the computer's *memory*, or controlling other chips.

Compatibility

The ability of different devices, such as a computer and a printer, to work together; or the ability of a particular *program* to run on a given computer. In short, the ability of anything in a computer system to work with anything else.

CPU

Central Processing Unit. The "heart" of a computer, with components that control the inter-

pretation and execution of instructions.

CRT

Cathode-Ray Tube. A TV or TV-like monitor used to display information and pictures. Also called a computer screen.

Cursor

A moveable symbol, usually a flashing square, that indicates where the next character will appear on the *CRT* screen.

Daisy-wheel printer

A printer that produces fully formed letters with an impact mechanism, which is a daisy-shaped wheel with raised characters on individual "petals." The output is comparable to that of a good typewriter. Sometimes called "letter-quality," these printers are generally slower than *dot-matrix printers*.

Data

Information put into or taken out of a computer.

Data-base manager

A *program* that allows

the user to enter, organize, sort, and retrieve information.

Disk

A magnetic device for storing information and *programs* accessible by a computer. A disk can be either a rigid platter (hard disk) or a sheet of flexible plastic (floppy disk).

Disk drive

A device that *reads* information from a *disk* and copies it into the computer's *memory* so that it can be used by the computer, and that *writes* information from the computer's *memory* onto a *disk* so that it can be stored.

Documentation

The written instructions that explain how to use computer *hardware* or *software*. Also refers to all instructions and remarks used to describe procedures when *programming*.

DOS

Disk Operating System. See *operating system*.

Dot-matrix printer

A printer that forms letters from a rectangular arrangement of dots. The more dots in the matrix (9 x 24, for instance), the better the letter formation. Dot-matrix printers are very fast and versatile, affording a choice of many type and print styles.

Though there are two types of dot-matrix printers—*impact* and *thermal*—the term is generally used to refer to the *impact type*. See *thermal printer*.

Download

To receive a *file* from a remote computer system. Opposite of *upload*.

Electronic mail

The transmission of messages, documents, or other information from one computer user to another. This can be done over telephone lines using devices called *modems*.

File

A collection of *data* stored as a named unit.

Flow chart

A diagram on paper that shows all the logical steps necessary to write a *program*.

Format

To prepare a *disk* so that it can receive and store information. Until you perform this task, the *disk* will not be able to store any information. The word "initialize" is often used to mean the same thing as format.

Freeware

Software that can be used and copied without charge. However, freeware is copyrighted, and the copyright holder generally asks that the user send a donation if the *software* is to be used regularly. See *public domain software*.

Full-duplex

A *modem* setting that allows a computer to both transmit and receive *data* at the same time. When two computers communicate and both are operating in full-duplex, the resul-

Educational Programs for —

STATEMENT OF OWNERSHIP, MANAGEMENT, AND CIRCULATION (required by 39 U.S.C. 3685) for January 1985 (Vol. 3, No. 1), of Family Computing, published monthly (12 issues per year) at 351 Garver Road, P.O. Box 2700, Monroe, OH 45050-2700, and having headquarters and general business offices at 730 Broadway, New York, NY 10003 (county of New York).

The names and addresses of the publisher, editor and managing editor are: Publisher, Shirrel Rhoades, Family Computing, 730 Broadway, New York, NY 10003; Editor, Claudia Cohl, Family Computing, 730 Broadway, New York, NY 10003; Managing Editor, June Rogoznica, Family Computing, 730 Broadway, New York, NY 10003.

Family Computing is a publication of Scholastic Inc. and the known stockholders holding 1 percent or more of total amount of stock are: Barbara R. Buckland, Judith McCracken Clark, Janet Oliver deCamp, Florence R. Ford, Margaret Hauser, Jack K. Lippert, G. Herbert McCracken, George H. McCracken, Jr., Mary Sue Robinson Morrill, George Sturges Oliver II, Henry William Oliver, John Bennett Oliver, Estate of Maurice R. Robinson, M. Richard Robinson, Jr., William W. Robinson, Margareta Oliver Schroeder (all of 730 Broadway, New York, NY 10003); Cede & Co., c/o The Depository Trust Company, P.O. Box 1719, Church Street Station, New York, NY 10249; Kray & Co., P.O. Box 10645, Newark, NJ 07193; Philadep & Co., G.P.O. Box 5675, New York, NY 10087.

The known bondholders, mortgagees, and other security holders owning or holding 1 percent or more of total amount of bonds, mortgages or other securities are: Prudential Insurance Company (including PruCapital), 213 Washington Street, Box 594, Newark, NJ 07101; Industrial Development Agency Bonds, Merrill, Lynch, Pierce, Fenner & Smith, Inc., 1 Liberty Plaza, 165 Broadway, New York, NY 10080.

The average number of copies of each issue during the preceding 12 months are (A) Total number of copies (net press run): 463,519. (B) Paid circulation: 1. Sales through dealers and carriers, street vendors, and counter sales: 75,174. 2. Mail subscriptions: 269,854. (C) Total paid circulation: 345,028. (D) Free distribution by mail, carrier or other means, samples, complimentary, and other free copies: 37,226. (E) Total distribution: 382,254. (F) Copies not distributed: 1. Office use, left over, spoiled after printing: 8,741. 2. Returns from news agents: 72,524. (G) Total: 463,519. Actual number of copies of single issue published nearest to filing date are: (A) Total number of copies printed (net press run): 481,548. (B) Paid circulation: 1. Sales through dealers and carriers, street vendors and counter sales: 88,674. 2. Mail subscriptions: 302,500. (C) Total paid circulation: 391,174. (D) Free distribution by mail, carrier, or other means, samples, complimentary, and other free copies: 22,000. (E) Total distribution: 413,174. (F) Copies not distributed: 1. Office use, left over, spoiled after printing: 4,700. 2. Returns from news agents: 63,674. (G) Total: 481,548.

I certify that the statements made by me above are correct and complete.

SHIRREL RHOADES
PUBLISHER

THE PRIMER

THE WORDS

tant "echo" effect allows you to see on your video display exactly what the remote computer has received.

Function key

A special key on the computer's keyboard that has been or can be designated to perform a specific task.

Graphics tablet

A kind of electronic drawing board. With a graphics tablet and a special pen, whatever you draw will appear simultaneously on the CRT.

Half-duplex

A *modem* setting that allows a computer to either transmit or receive *data*, but not to do both at the same time (like a CB radio).

Hard copy

Information printed by the computer onto paper.

Hardware

The physical, nonchanging parts of a computer system. Contrasted with *software*, or *programs*, which can change.

Information services

Broad-based *data bases* that offer a variety of services, ranging from airline reservation information to stock market quotations. You need a *modem* to link up with such a service.

Input

Programs or *data* entered into the computer.

Interface

An electronic connector between two parts of a computer system.

K

Abbreviation for *kilo-byte*. Used to describe the amount of *memory*, or storage space, a computer has; it signifies 1,024 *bytes*. A computer with 16K of *memory*, for example, can store 16,384 *characters* of information at one time.

Logo

An educational *programming language* that allows the user to draw pictures on the screen. Logo is particularly good for teaching young children how to *program*.

Machine language

A binary code consisting of "0s" and "1s," which is the only language a computer understands. *Programs* written in any other language, such as *BASIC*, are translated by the computer into machine language for processing.

Memory

The place in a computer where *data* and *programs* are stored.

Microprocessor

A tiny processor on a single *chip*. The "brains" of all microcomputers, it is also found in many consumer products.

Modem

A contraction of Modulator/Demodulator. A device that makes it possible to transmit and receive computer *data* over telephone lines.

Monochrome monitor

A type of monitor that can display only one color or on a black background. They come in either white, green, or amber.

Mouse

A small device, connected by cable (its tail) to the computer, that can be moved around on a flat surface to cause a corresponding movement of a *cursor* or arrow on the monitor. By clicking a button on the mouse, the user can choose or implement functions, such as *EDIT* or *PRINT*, from a *menu*.

Operating system

A built-in *program* that controls the operation of a computer system, such as controlling signals to the *disk drive* or printer. When a computer system is turned on, the operating system is the first *program* executed. All subsequent *programs* are loaded and supervised by the operating system.

Originate/answer

Refers to the two basic modes required for communication via *modem*. When two computers linked to *modems* establish connections, one *modem* must be in the originate mode (the call-

er), and the other must be in the answer mode.

Output

Computer-generated information that is transferred to a monitor, *disk*, *tape*, or printer.

Parallel interface

An interface between two parts of a computer system, most often a computer and a printer, that transmits *data* eight *bits* (one *byte*) at a time, along separate, "parallel" wires. See *serial interface*.

Pascal

A *programming language* that can be used on many microcomputers. While it is considered more difficult to learn than *BASIC*, it can generate *programs* that run faster and use less *memory*.

Peripherals

Hardware accessories for a computer, such as a *disk drive*, printer, or *modem*.

Piracy

The unauthorized copying of copyrighted *software*.

Can you think of a better gift
to give to your child

Ages

Pixel

Stands for "picture element." A single dot of light on a TV screen or computer monitor. These tiny elements are used to create electronic pictures, or graphics.

Plotter

A machine, attached to a computer, that prints lines or graphs on paper.

Port

A "female" socket on a computer where you can plug in peripherals, such as a printer or modem.

Program

A set of step-by-step instructions that tells a computer how to solve a given problem. Also, to prepare such a set of instructions.

Programming language

A language, with clearly defined rules, that can be used to express a computer program.

Public domain software

Software that is not

copyrighted and can thus be used and distributed freely. See *freeware*.

RAM

Random Access Memory. An area in the computer where information is stored. When called into this area, information can be changed, or edited. However, it will be lost when the computer's power is turned off, unless you first save the information.

Read

The process of copying information from a storage device (such as floppy disk or tape) into the computer's memory. Reading only copies, it does not erase the data from where it is stored.

Resolution

The sharpness of a picture on a CRT, usually described as "high" or "low." The higher the resolution, the sharper the picture. Resolution is expressed by the number of pixels in the display. For example,

512 x 342 is much sharper than 320 x 192.

RGB monitor

Red-Green-Blue. A color monitor that achieves a superior display by using three color beams instead of one (as regular "composite" color monitors do).

ROM

Read Only Memory. Permanent memory built into a computer by a manufacturer. The information stored here gives the computer operating instructions when it is first turned on. The user cannot change this memory.

Save

To store information from memory on tape or disk so that it can be used again.

Serial interface

An interface between two parts of a computer system that transmits data one bit at a time. Slower than a parallel interface.

SIG

Special Interest Group. A fraction of a larger group, such as a users' group, made up of members with common interests, e.g., a Stocks & Bonds SIG.

Software

Computer programs. Also, tapes and disks.

Sprites

Small, high-resolution objects that can be moved independently of other text or graphics on the monitor. They can change color and size and move in front of or behind other objects on the monitor. Used to create animated sequences. Called "players" and "missiles" on Atari computers.

Terminal software

Used in conjunction with a modem, this type of software is necessary to communicate with other computers and perform various functions, such as upload and download data.

Thermal printer

A type of dot-matrix

printer that works by "burning" dots into heat-sensitive paper. The printer is extremely quiet and does not require ribbons; the paper, however, is expensive and can be hard to find.

Upload

To transmit a file from your computer, via modem, to another computer.

Word processor

A program that allows the user to write, edit, or rewrite text. The text can be saved on a storage device and printed out. A word processor allows the user to make changes in the same text without retyping the whole page.

Write

The opposite of read. To transfer information from the computer's memory to a storage device such as a floppy disk. Write-protect is a procedure for preventing new information from being added to a disk.

WORD ATTACK!™

Your Computer Speaks A Foreign Language!

FRENCH,
SPANISH or **GERMAN**

Now the bestselling game that taught you English vocabulary words has been adapted into an exciting, educational program for learning hundreds of French, Spanish or German words.

Developed and produced by Gessler Educational Software—the foreign language experts—Word Attack! includes a Word Display, multiple-choice and sentence completion quizzes, and a fast action arcade game. Feedback and music in the target language keep the pace lively.

Children—and adults—will eagerly accept the challenge of learning a foreign language with Word Attack! Designed for the beginning to intermediate student, the program contains a text editor, so it can be upgraded to any level of instruction.

ULTIMATE SPEECH DIGITIZER

Only
\$89.95
Complete

Hailed at CES as one of the most innovative consumer electronic products of 1984, the Voice Master for 1985 is even better! It is a speech synthesizer that speaks clearly in your own voice and language. Now it even measures voice pitch. Music can be written, produced, and taught just by humming a tune! Word recognition software (available separately) allows the computer to respond to your voiced commands.

Available for the Commodore 64, Apple II, and Atari 800XL.

SEE YOUR DEALER NOW FOR A VOICE MASTER DEMONSTRATION

Or call us at (503) 342-1271 for a telephone demonstration. Please include \$4 shipping/handling when ordering direct. Visa, MC, MO, or check. Call or write for further information and receive a FREE audio demo tape!

FAY:
THAT MATH WOMAN
...arithmetic in action

What does "6 + 3" mean? Success in arithmetic requires more than simply memorizing the answer. Your child requires an understanding of what those abstract symbols mean. Fay: That Math Woman is an engaging program which will do just that. Fay illustrates your child's answers on a number line - providing a picture of how each operation works.

All 4 operations included. For children in grades K to 3. Only \$29.95 VISA & Mastercard accepted. On disk for Apple II™ and Commodore 64™. Call or write today. Also available at many computer stores.

READER SERVICE FREE INFORMATION

Readers are invited to learn more about our advertisers' products. This is a free service to Family Computing readers. Follow the directions below and the materials will be sent to you promptly and free of charge.

1. Circle the number(s) on the card that corresponds to the key number appearing in the Advertisers' Index to the left of the advertiser's name.
2. Simply mail the card. Postage is necessary. The literature you requested will be mailed to you directly free of charge by the manufacturer.
3. Print or type your name and address on the attached card. To receive the requested information, you must answer all questions on the reader service card.
4. Circle number 138 on the reader service card if you wish to subscribe to Family Computing. You'll be billed for 12 big issues for only \$17.97.
5. Do not use the card for change of address. Please use subscriber service form in magazine.

Quick.

How many plates can
the Juggler juggle?

Chinese Juggler

That depends on you. You are the Juggler and your act is the delicate art of plate spinning. Yours will be a tough act to follow if you succeed in matching colors and spinning plates on all 8 poles at the same time.

As your skill increases, so does the pace and the challenge of the game. You must act with speed and precision or the curtain will come down and your act will be all washed up!

Chinese Juggler is a refreshing departure from the usual shoot-em-ups and strategy games. It's fun, fast-paced and will delight players of any age. For Commodore 64. New from Creative Software.

\$24.95

"Commodore 64" is a trademark of Commodore Electronics, Ltd.

How do you
moonwalk, snake
and tut?

Break Street

You'll soon become a break dancing expert with our latest bestseller, Break Street. Now that combination of gymnastics, mime, funk, and just plain show-off, leaves the sidewalks and comes home to your Commodore 64.

Individual play guides you through the footwork of moonwalk, backspin, windmill, tut, and the rest of those sidewalk moves. Slow motion and lively musical accompaniment help you perform each move step by step. String together a whole series of moves and record them for future replay.

Catch the beat of the street with Break Street. For individual or team play. New from Creative Software.

your finger tips.**

What's the capital
of Alaska?

Roll Call USA

Do you know? Get ready to outwit your family and friends with Roll Call USA's fun facts on states, capitals and major industries.

Roll Call USA combines history and geography facts into a colorful question and answer game that challenges your knowledge of the 50 states, their capitals, major industries and statehood dates.

Feel confident? Drill yourself with a Flash Test. The game is speeded up, so think fast. Your answers are tallied up at the end for a final score.

Roll Call USA, a game of USA trivia for team or individual play. For Commodore 64. New from Creative Software.

10:00

SIMONS' BASIC

Rated PG. Expands Commodore BASIC by an additional 114 commands. Convenient programming commands such as RE-NUMBER and TRACE plus graphics plotting command. (Cartridge)

Announcing the most exciting variety show on television.

Featuring many of the stars of arcade games, education and the business world.

Produced by (and for) Commodore, the people who bring you the Commodore 64™, a 64K computer that would be a value at three times its price. In fact, many of its competitors are three times its price.

Produced in living high resolution graphics with 16 available colors and with eight 3-dimensional sprites.

With a real high fidelity sound that covers a 9-octave range.

And a supporting cast of low-price, high capacity disk drives, printers, monitors (a better way to watch Commodore 64) and modems.

So, if you're not pleased with what's on your tv set tonight, simply turn on your Commodore 64.

COMMODORE 64
IT'S NOT HOW LITTLE IT COSTS,
IT'S HOW MUCH YOU GET.
