***NOW ONE OF YOUR MECHANIC'S TOOLS
IS ANOTHER MAN'S MIND.***

At GM, we think of computers in human terms. Because today, we have begun to program human knowledge—and logic—into a computer. It's called artificial intelligence.

So, even when an engine expert retires from GM, his mind can still work for you. His lifetime of experience can go into a computer. The computer can then dispense this invaluable knowledge not only to GM engineers, but to your mechanic, too. That way, he'll be able to use this computer to help him service your car.

With artificial intelligence, a lifetime of experience can now last a hundred lifetimes. Because at GM, our quest for knowledge never tires. Or retires.

***THE GM ODYSSEY:
SCIENCE NOT FICTION***

GM

Walt Disney's greatest creations can now be your greatest creations, too

If you or your children have ever dreamed of following in the fingertips of Walt Disney, Bantam Software has two unique opportunities to do just that.

Walt Disney Comic Strip Maker lets you become an electronic cartoonist, as you create and print your own comic strips starring Mickey & Minnie, Donald & Daisy, and other classic characters from Disney.

And with *Walt Disney Card & Party Shop*, 19 Disney favorites can make special guest appearances on just about anything you and your printer can create: from greeting cards to place cards, wrapping paper to writing paper, name tags to place mats.

Both programs are designed to take you from a cartoonist's first steps to wherever your imagination may lead. Which makes them both reams and reams of fun.

COMPU SERVE. YOU DON'T HAVE TO KNOW HOW IT WORKS TO APPRECIATE ALL IT CAN DO.

You don't have to know about hardware. You don't have to know about software. All you have to know is that CompuServe is a computer information service. You subscribe to it.

And in return, you have access to an incredible amount of information, entertainment, communications and services right at your fingertips.

Here are a few of the hundreds of things you can do with CompuServe.

COMMUNICATE

Even beginners can compose, edit, send and file messages the first time they go online with CompuServe's **EasyPlex™ Electronic Mail**. Friends, relatives and business associates—anywhere in the country—can stay in constant, convenient touch.

CB Simulator features 72 channels for "talking" with thousands of other subscribers throughout the country and Canada. The chatter is frequently hilarious, the "handles" unforgettable and the friendships hard and fast.

More than 100 CompuServe Forums welcome your participation in discussions on all sorts of topics. There are

Forums for gourmet cooks, golfers, musicians, pilots, sailors and more, all designed to show you how easy and fun it can be to get the most out of your computer.

If you want to learn more about your computer system, CompuServe's at your service. Our **Users Forums** cater to specific computer makes and models, and offer information and expertise on many different types of machines. You'll find electronic editions of popular computer periodicals. You can even find free software.

And if you need answers to software questions, seek out a **Software Forum**. You can often find solutions quickly and easily online.

Bulletin Boards let you post messages where thousands will see them. Use our National Bulletin Board or the specialized bulletin boards found in almost every Forum.

HAVE FUN

You'll find all sorts of sports and entertainment trivia games, plus brain-teasing educational games. You can go it alone or compete against

players from all over the country. Test your wits in the only online TV-style game show with real prizes. Then, when you're ready, go for the ultimate in excitement and get into one of our interactive space adventures.

CompuServe's **movie reviews** keep that big night at the movies from being a five-star mistake. **Soap opera updates** keep you up on all the latest turmoils and tragedies on your favorite daytime dramas.

For leisure-time reading and relaxing, look into the electronic editions of some of your favorite magazines, including OMNI On-Line.

SHOP

CompuServe's **ELECTRONIC MALL™** lets you take a coast-to-coast shopping spree without ever leaving home. It's an exciting and easy way to shop online, buying name-brand goods and services from nationally known merchants.

SAVE ON TRIPS

CompuServe's travel services let you control your own travel arrangements through the convenience of your personal computer. Scan flight availabilities on almost any airline worldwide. Find airfare bargains, then book your own flight online.

With CompuServe you've got direct and connecting schedules for national and international flights. Plus complete listings of over 28,000 hotels around the world.

MAKE PHI BETA KAPPA

When you run out of the answers at homework time, it's time to turn to CompuServe for the complete set of continuously updated encyclopedias that doesn't take up an extra inch of shelf space.

The College Board, operated by the College Entrance Examination Board, gives tips on preparing for the SAT, choosing a college and getting financial aid.

KEEP HEALTHY

HealthNet will never replace a real, live doctor—but it is an excellent and readily available source of health and medical information.

On a more personal note, **Human Sexuality** offers information on a variety of topics concerning this very important aspect of human behavior. Hundreds turn to it for honest, intelligent and candid answers.

BE INFORMED

CompuServe puts all of the latest news at your fingertips. Our sources include the AP news wire (covering all 50 states, plus national news), the *Washington Post*, the *St. Louis Post-Dispatch*, specialized business and trade publications and more.

Find out instantly what Congress did today, who finally won the game and what's happening back in Oskaloosa, with the touch of a button. And, our executive news service lets you tell us what to watch for. We'll electronically find, "clip" and file news for you...to read whenever you'd like.

INVEST WISELY

Our comprehensive investment help just might tell you more about the stock you're looking at than the Chairman

of the Board already knows. (Don't know who the chairman is? Chances are, we can fill you in on that, too.)

CompuServe gives you complete statistics on over 10,000 NYSE, AMEX and OTC securities. Historic trading statistics on over 90,000 stocks, bonds, funds, issues and options. Five years of daily commodity quotes. Standard & Poor's. Value Line. And more than a dozen other investment tools.

SUPERSITE facilitates business decisions by providing you with demographic and sales potential information by state, county and zip code for the entire country.

The national business wire provides continuously updated news and press releases on hundreds of companies worldwide.

GET SPECIALIZED INFORMATION

Pilots can get personalized flight plans, weather briefings, weather and radar maps, etc. Entrepreneurs use CompuServe too for complete step-by-step guidelines on how to incorporate the IBMs of tomorrow. Lawyers, doctors, engineers, military veterans and businessmen of all types use similar specialized CompuServe resources pertinent to their unique needs.

So much for so little.

CompuServe makes the most out of any computer, and all you pay is a low, one-time cost for a Subscription Kit (suggested retail price \$39.95). Usage rates for standard online time (when CompuServe is most active) are just 10¢ a minute.

In most major metropolitan areas you can go online with a local phone call. Plus, you'll receive a **\$25.00 Introductory Usage Credit** with the purchase of your CompuServe Subscription Kit.

So easy the whole family can go online.

CompuServe is "menu-driven," so beginners can simply read the menus (lists of options) that appear on their

screens and then type in their selections. Experts can skip the menus and just type in GO followed by the abbreviation for whatever topic they're after.

If you ever get lost or confused, just type in H for help, and we'll immediately cut in with instructions that should save the day. Plus, you can always ask questions online through our feedback service or phone our Customer Service Department.

Here's how to subscribe.

To access CompuServe, you need a computer, a modem (to connect your computer to your phone) and, in some cases, some simple communications software. Now you're ready to order your CompuServe Subscription Kit.

For your low, one-time subscription fee, you'll receive:

- a complete, easy-to-understand, 170-page spiral-bound Users Guide
 - your exclusive preliminary password
 - a subscription to CompuServe's monthly magazine, *Online Today*
- All this, plus:
- a \$25.00 usage credit!

To order your Subscription Kit or to receive more information, call **800-848-8199** (in Ohio, 614-457-0802).

CompuServe Subscription Kits are also available in computer stores, electronic equipment outlets and household catalogs. You can also subscribe with materials you'll find packed with many computers and modems sold today.

CompuServe. You don't have to know how it works to appreciate all it can do—for you.

EDITOR'S NOTE

FAMILY TRADITIONS

When I conjure up childhood memories, family is the first thing that comes to mind. Not any one individual, but the group, together. I remember the experiences we shared, especially the occasions that became our own special traditions.

For this holiday issue, I asked FAMILY COMPUTING's editorial staff about some of their families' special holiday memories. Over and over, I heard tales of far-flung families congregating to exchange stories, make music, and eat special holiday treats. A few of my favorites follow.

Managing Editor Charlotte Pierce grew up on a 90-acre farm in Eastern Washington, where, she told me, "Just before Christmas we'd trek into the woods, a thick forest of Douglas fir and pine, to harvest a Christmas tree. More than likely, my brother and I would have spotted our tree the previous summer or fall while gathering firewood or exploring. Henry would shinny up the tree if it were a tall one, and set to work topping it with axe or saw while the rest of us watched, commenting on his foolhardiness. He'd lower the tree down to us, and we'd catch the first strong, pungent odor of freshly cut evergreen. Dad then hoisted the tree on one shoulder while his 'elves' kept the tip from dragging on the way back to the farmhouse."

For Reviews Editor David Hallerman, the holidays meant Hanukkah, the Jewish holiday known as the Festival of Lights. David recalls, "My studies of Jewish history in Hebrew school heightened my awareness of the holidays, especially Hanukkah, which centered on the home and family. On each of the eight days of the holiday, we'd light an additional candle, receive gifts of money from our parents, and eat 'latkes,' potato pancakes. I remember the warmth and happiness I always felt during this time."

Researcher Stephanie Esters, who is about to spend her first Christ-

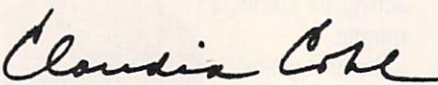

mas away from her home in Mississippi, will especially miss "sitting down with my thirteen brothers and sisters to laugh and cry over my brothers' tall-tale-telling sessions—mostly at their sisters' expense."

Designer Vincent Ceci's favorite memories are of "an old Italian tradition of seven fish dishes. Each Christmas Eve, we'd have a seven-course dinner—all fish."

Editorial Coordinator Minerva Diaz Jimenez's favorite holiday tradition is the Christmas Eve gathering at her Aunt Nereida's house in New York City, where the family plays and sings Puerto Rican and Spanish music. "Uncle Benny is the lead singer, accompanied by the other uncles on the guitar, maracas, and guicharo, while the aunts and children sing. What I like most about these family celebrations is learning more about my background, my heritage."

In addition to all our personal traditions, here at FAMILY COMPUTING, we've started some of our own. This issue, which includes our "3rd Annual Best Ever Shopping Guide for Computer Lovers," is one of them. Every year we collect in this one issue a wide-ranging assortment of holiday shopping and gift-giving tips. Armed with this and our November "Buyer's Guide to Computers," your annual shopping is sure to be a success. That's certainly the experience of our publisher, Shirrel Rhoades, who has started his own tradition of buying himself another computer every Christmas.

Most of all, we like the tradition of sending you our wishes for long-lasting happiness and good health at this holiday season.

INTRODUCING

THE NEWSROOM•PRO™

More good news from the makers of The Newsroom™

We're making headlines again.

Over 250,000 people are already using The Newsroom™ to publish their own newsletters at home, at school and in the office. But some of you wanted more. More graphics. More speed. More advanced features. A more professional look. So, for demanding desktop publishers like you, we've created The Newsroom Pro.™

Available for:
IBM PC, XT, AT
and compatibles.

Is not copy protected
for your convenience.

Sophisticated features for more efficient use.

Advanced word processing lets you quickly create an entire column on screen at once. Scroll up and down the column as you write, edit and set down graphics. What you see is what you get. Text automatically flows between columns, wraps around graphics and rearranges itself as you design your layout. You can even change type styles, sizes and line spacing. Plus, import ASCII files and convert files from The Newsroom.

Add-on features are standard equipment. Choose from **over 2000 pieces of clip art.** Then resize, flip, overlap and personalize the art with powerful drawing and editing tools.

Get complete details about The Newsroom Pro.™

Mail this coupon to:

How to teach your child the fun of learning.

Start with EduWare's Early Learning Series.

Most early learning programs are divided into two parts. The learning parts. And the fun parts.

In EduWare programs, learning *is* the fun part. Because lively graphics and catchy tunes *illustrate* words, counting, even addition and subtraction. Plus, you can tailor each program to meet your child's growing abilities.

Use just one. Or use all three. Either way, EduWare programs make sure your child discovers the fun of learning. But isn't that what you'd expect from a Britannica Learning Company?

INTRODUCTION TO COUNTING

No other program offers so many ways to grasp the concepts of counting, addition and subtraction. Your child counts bouncing balls, measures water and much more.

Ages 4-8.
For Apple® II &
IBM® PC/PCjr
computers.

Ages 4-8.
For Apple® II &
IBM® PC/PCjr &
C64/128™ computers.

SPELLING & READING PRIMER™

Watch the excitement as your child matches *hundreds* of words with the correct picture. Later on, let them practice spelling with and without help.

WEBSTER'S NUMBERS

Get your child ready for counting with this lively four-games-in-one learning program. It introduces shape and number recognition, number sequences, problem solving, and more.

Ages 4-8.
For Apple® II &
C64/128™ computers.

EDUWare®

A Britannica Learning Company

To order or obtain the name of your nearest retailer, call toll-free 800-572-2272 or write to EduWare Services, Inc., Dept. C, 185 Berry Street, San Francisco, CA 94107.

LETTERS

LEMONADE-STAND MANAGEMENT

I enjoyed your article in the Personal Finance department of the September issue. It mentioned a program, *Lemonade* (MECC), that is now in the public domain. Because I have an Apple IIe for my children, this sounds like an excellent program to add to our home public-domain software library. Could you advise me as to how to obtain this public domain program?

HELEN M. ROBINSON
Wilsey, Kansas

EDITOR'S NOTE: *Users groups and electronic bulletin boards are good sources of public-domain software. However, MECC informs us that Lemonade is NOT in the public domain. You may purchase an enhanced version of MECC's popular Lemonade program, now entitled The Market Place.*

UNDAUNTED BY DATAS

I just wanted to thank you for continuing to support the fine TI-99/4A with programs like *School Days* in the September issue. The formidable-looking set of DATA statements might prevent some readers from typing in the program, but it is not at all that difficult, and the results are excellent. I hope that you will continue to print more programs of this kind, ones that are beyond the most elementary level.

BOB DUDLEY
Chess Enterprises Inc.
Coraopolis, Pennsylvania

I enjoy FAMILY COMPUTING very much. I own a Commodore, and we use TRS-80 and Apple computers at school, so it's wonderful to be able to run the same program on different computers when you print several versions.

I was, however, disappointed to find no Commodore version for *Word Search* or *School Days* in the September issue, and I urge you to consider including them in an upcoming issue.

JUDY WRIGHT
LaPorte, Indiana

READER SAYS THANKS

I have recently survived a class in Microcomputer Applications, and your magazine is the first I've come in contact with that I can understand and relate to. As one just starting to discover how fascinating

computers can be, I'm looking forward to learning more. Thank you for the great magazine!

ANN M. BAUER
Marion, Ohio

WRITING WITH THE RIGHT WORD PROCESSOR

In "Finding the Right Word Processor," (*August 1986*), you didn't do justice to the *Bank Street Writer* program by Broderbund Software. You did mention that the Commodore version was reviewed, and I'd like to alert you to the dissimilarities of other versions.

The IBM version of *Bank Street Writer* displays 80 columns, has a maximum file size greater than 10 pages, and does both underlining and boldface. This version belongs with the Family/Professional programs. In fact, my college freshmen English students write all of their papers, including 15-page research papers, with the IBM version of *Bank Street Writer*, and I am writing this letter with it. Among inexpensive, easy-to-use programs, I think that *Bank Street Writer* is best.

MARLYS M. STYNE
Chicago, Illinois

I wish to alert you to a word-processing package entitled *Kwik-Write*, which was not included on pages 30-31 of your word-processing article in the August issue.

The package is published by Data-most and sells for under \$20. It is easy to use, well-documented, and highly reliable. Additionally, it houses most of the features that higher-priced, more complicated word-processing packages offer. A spelling-checker program is available for *Kwik-Write*, too.

I have several *Kwik-Ware* programs. All are very inexpensive, and all are very good for my computer applications.

CHUCK GAGLIARDI
Philadelphia, Pennsylvania

EDITOR'S NOTE: *We've learned that Datamost has gone out of business. However, the software you mention should still be available, while supplies last.*

I am writing in reference to "Finding the Right Word Processor" in the August issue of FAMILY COMPUTING. Next to the *Letter Perfect* entry, it says the program can "display 80-column width." →

VISIT EXOTIC LANDS AND WIN OVER THE NATIVES.

There is a place, probably a long, long way from where you're sitting right now, where grown men actually wear dresses and throw telephone poles in the air as a sign of athletic prowess.

It is true. There is another rather bizarre land where grown men actually throw *themselves* in the air as a sign of athletic prowess.

Right off the edge of a cliff. We're talking, of course, about Scotland's famous Caber Toss and the death-defying divers of Acapulco.

Two of the events you'll find in *World Games*,™ the newest sequel in our bestselling "Games" series.

Here's your chance to dash around the globe as a big-time international athlete competing in 8 extraordinary sports.

Go stomach to stomach with a 400 pound sumo. Jump barrels in Germany.

EPYX®

Anyone who can throw a telephone pole long distance is entitled to wear a dress.

You haven't lived until you've taken a log out for a spin.

Try Canada's ridiculously difficult log roll. Or ski the brutal, wintry slopes of France.

Then it's back to the good old US of A to ride a bucking bull. And off again to bully Moscow with some heavy-duty weight lifting.

If you manage to upset enough countries, your name

will be permanently inscribed in the World Hall of Fame.

This then, is a challenge of global proportions.

*One to eight players.
Amiga, Apple II &
compatibles, Atari ST,
C64/128, IBM &
compatibles.*

The question is, are you ready to go the distance?

The Harrison family made \$500,000 in the stock market. Then lost \$1 million in real estate.

Fortunately, they were playing *Millionaire* and *Baron* by Blue Chip software. So they really didn't lose a dime.

In addition to dabbling in the stock market, the Harrisons also play the commodities market.

You see, this family of five owns several Blue Chip software programs including *Millionaire*, *Tycoon* and *Baron*.

Blue Chip programs let the Harrisons learn all about money and investing. And they let them have fun at the same time. They provide just the kind of challenge and excitement you'd expect from a Britannica Learning company.

In fact, there's only one better way to expose your family to the world of finance. But that could be frightfully expensive.

MILLIONAIRE™

A stock market simulation that's so realistic it even has political, social and economic events that cause the market to fluctuate.

TYCOON™

This authentically unpredictable simulation allows you to trade everything from gold and foreign currency to oil and coffee.

BARON™

Learn the ins and outs of investing in all kinds of real estate, including commercial, residential and undeveloped properties.

For IBM® PC/PCjr, the Apple® II series, Commodore 64/128, Macintosh™ & Atari® 800/XL/XE™* computers.

BLUE CHIP SOFTWARE
Published by DesignWare,® Inc.
A Britannica Learning Company

Call toll-free (800) 572-2272 to order or to obtain the name of the dealer nearest you. Or write Blue Chip Software, Dept. C, 185 Berry St., San Francisco, CA., 94107.

*Baron not available for Atari.

LETTERS

I have *Letter Perfect* and an Atari 130 XE computer, but I have been unable to figure out how to get 80-column display.

GORDON OLDE
New York, New York

EDITOR'S NOTE: According to David Young, owner of CDY Consulting ([408] 745-2004), the *OmniView XE/XL* (\$40) will enable you to display 80 columns on your screen. However, the manufacturer of *Letter Perfect* (LJK, Inc.) does not recognize CDY's *OmniView* as a *Letter Perfect* enhancement. "LJK has made a decision not to support the product," said Ken Berry of LJK Customer Support ([314] 962-1855).

I don't normally buy FAMILY COMPUTING magazine, since I am a more experienced computer user than most of your readers. But I picked up a copy of your September issue for the articles on word processing enhancements and desktop publishing. After absorbing these and the other articles and features, I have a couple of comments.

First: Absolute statements in this fast-changing business are risky. A case in point is the assertion on page 28 that thesauruses are found separately. *WordPerfect 4.1* has an integrated thesaurus that is fast, convenient, and thorough. Also, the spelling checker in *WordPerfect* uses a one-stage method in which the user corrects, accepts, or adds unmatched words as the program reviews the file. I find this much faster and easier to use than the two-step checks found in most other programs.

Second: What the home and hobby market needs now in desktop publishing programs is a combination of *The Print Shop* and *The Newsroom*. A new or upgraded offering would have the menus, borders, selections and ease of use contained in *The Print Shop*, plus the ability to handle and place text in different fonts and sizes embodied in *The Newsroom*. Ideally, the program could import text from word-processing programs as well as generate its own. Dot-matrix printer support would be standard, since few buyers own laser printers, but an optional extra-cost disk could have laser drivers for people who have access to one at work.

ROGER THOMAS
Lawrenceville, New Jersey

A CLINICAL QUESTION

I am writing in response to your September 1986 edition of *Computing Clinic*, specifically the incorrect answer given to Mike Gamache's question. I have also had problems loading the game *Hacker* (Activision) on my C 128 with my 1571 disk drive. The 1571 is the problem in this case. The 1571 is not 100-percent compatible with C 64 software. Even though I have found that *Hacker* is the only program that my 1571 does not load, I solved the problem by having both my 1571 and 1541 disk drives hooked up to my C 128 all the time. When I want to load *Hacker*, I have to turn on my 1541.

EILEEN BUSECK
Erie, Pennsylvania

EDITOR'S NOTE: According to Activision customer support ([800] 227-9759), revisions have been made to *Hacker* to allow the C 128 with a 1571 disk drive to load the program. *Hacker* packages are now plainly marked with a blue dot to indicate that they are revisions. Activision will replace earlier versions of *Hacker*; call Activision for replacement information.

RESOLUTION OF RAMISTAKES

While reading your "Buyer's Guide to Personal Computers" in the June issue, I came across a few mistakes in the Amiga listing in the comparison chart.

In the *RAM (Min/Max)* column, the Amiga's maximum RAM was stated as 512K. The Amiga's maximum RAM is actually 8.5 megabytes. In the *Maximum Resolution* column, the stated resolution of 640 x 200 is really the Amiga's medium resolution. Its maximum is 640 x 400.

JOHN BRAITHWAITE
Trinidad, West Indies

CORRECTIONS

The telephone number for the International Council for Computers in Education was printed incorrectly in the October issue. The correct number is (503) 686-4414.

In the September "Buyer's Guide to the New Printers," the price listed for Okidata's Microline 292 is incorrect. The actual suggested retail price is \$749.

WHY AREN'T YOUR TEENAGERS GETTING BETTER GRADES?

98% of all the students we surveyed have trouble doing homework. The result: frustration, confusion and poor test grades.

The biggest problem areas? Kids say writing skills and math word problems. Now there's a solution. THE HOMEWORK HELPERS™ from Spinnaker will help eliminate these problem areas.

MIXTURE PROBLEMS

Ralph has \$1.20 in nickels and dimes. If he has six more dimes than nickels, how many of each type of coin does he have?

	Nickels	Dimes	Total
Price/Unit	5 cents	10 cents	
# of coins	X		
Value			\$1.20

DATA ENTRY: Represent the number of dimes in relation to the number of nickels.

ing word problems into manageable parts. And it shows students how any math word problem can be analyzed in a methodical way. There's even a built-in algebra calculator that removes the drudgery of doing tiresome calculations.

MATH

MATH WORD PROBLEMS helps the student translate word problems into workable equations. A step-by-step tutorial uses a unique grid system for break-

WRITING

WRITING helps the student define the goals of a writing assignment. By answering a series of questions posed by the computer, the student gets a quick and easy first draft. Then, the draft pops into the word processor, where the student edits it into a final essay or book report, spellchecks it, prints it out and hands it in.

Only hard work will get your teenagers straight A's in school. THE HOMEWORK HELPERS are a step in the right direction.

BOOK REPORT

CREATE IDEAS

What is the theme—the main idea—of **Great Expectations**? Type your answer.

Finding the theme sometimes takes a little digging.

Press **Ctrl H** for some common themes.

Some common themes are: the power of love, the triumph of persistence, the beauty of nature, greed, intolerance, alienation, escape from conformity, the journey of life.

Available for: Apple II series, Commodore 64/128 and IBM PC/XT/AT. You can find HOMEWORK HELPERS at your local retailer or order direct from us. Call 1-800-826-0706. Illinois residents call 1-800-826-1330. Only MasterCard, VISA and American Express accepted for phone orders.

DesignWare[®] grows with your child - to keep learning alive. Year after year.

Most learning software will educate—even entertain—your child. For a week or so. DesignWare, however, not only educates and entertains, it *grows* with your child. All year long.

And because you can choose from several skill levels and can easily add your own homework problems, your child can *continue* to grow with DesignWare programs. Year after year.

But isn't this what you'd expect from a Britannica Learning company?

SPELLICOPTER[®]*

With the Spellicopter, your child battles UFOs to improve spelling and vocabulary skills while rescuing stranded letters. Choose game play and skill levels. And easily add spelling homework.

Ages 6-12

DesignWare[®]

Ages 6-12

MATH MAZE[®]*

Watch the excitement as your child races through a maze collecting answers to math problems. Forty mazes teach +, -, × and ÷ facts. Plus you can create your own mazes.

CRYPTO CUBE[®]*

In this captivating vocabulary game, your whole family has fun discovering the hidden words on four sides of a rotating cube. Learn over 1,000 words from 50 categories. Then add your own.

Ages 8 and up

OTHER GRADE SCHOOL PROGRAMS:

Spellagraph[®], Spellakazam[®], Trap-A-Zoid[®], Creature Creator[®], The Notable Phantom[®], States & Traits[®], The Grammar Examiner[™]

*For IBM[®] PC/PCjr, Apple[®] II, Commodore 64/128[™] & Atari[®] 800/XL/XE

CIRCLE READER SERVICE 26

HELPFUL HINTS

EDITED BY CHARLOTTE PIERCE

Nearly every computer user develops personal shortcuts, cost-cutting techniques, and neat programming tricks that fit his or her own computing style. Here are several hints submitted by readers who have discovered that finding new ways to get more from a computer is part of the fun of having one.

Apple. Extensive use of DATA statements is an excellent way to establish a smooth-running program, but many typists find it hard to debug a program after they have entered it. When typographical errors are made in the DATA lines of a program, painstaking proofreading is often the only recourse.

To help pinpoint faulty DATA lines, insert

Z = 1

before the FOR...NEXT loop you wish to check. Within the FOR...NEXT loop, insert:

[line number] PRINT Z;" ";Z = Z + 1

The number represented by the variable Z will tell you that you must count the commas in the DATA lines until that number is reached; the error will be in that general area of the program. These lines will disrupt the appearance of the program, but you'll have a great debugging tool. After the error is corrected, these lines should be removed.

MICHAEL FAHY

Central City, Pennsylvania

EDITOR'S NOTE: *This routine does not work if you have more than one variable per READ statement or more than one READ statement. The most common mistake people make in typing programs is adding an extra comma at the end of a DATA statement or between DATAS.*

Do you have a program that needs to access the disk drive frequently? You know that every time you have to read from or write to a disk, it takes the drive a half second to get up to speed. Here's a way you can eliminate that warm-up time.

By typing

POKE -16151,0

you can turn on the motor of the disk drive before you access it during a program. When you're done, type POKE -16152,0 to turn the motor off. This POKE can also be used to help you clean your second

disk drive. First, put an initialized disk in drive 2 and type the following line:

CATALOG, D2

Then, take out the initialized disk and insert a cleaning disk. Type

POKE -16151,0

and the motor will start to spin. After 30 seconds, type

POKE -16152,0

and the motor will turn off, and your drive will be clean!

MICHAEL STARR

Morganville, New Jersey

EDITOR'S NOTE: *These hints have been tested and found to work. Use a wet/dry (non-abrasive) head-cleaning system for cleaning disk drives.*

Commodore 64. Have you ever been editing a program and wished there were a way to speed up or slow down the cursor? By setting the memory location of timer A (POKE 56325) to a number from 0 to 255 (0 being the fastest; 255 being the slowest), you can change the speed of your cursor. To return to normal, press the STOP and RESTORE buttons simultaneously.

JOE BENNETT

Williamstown, New Jersey

Atari XL series. If you're tired of hearing that awful "beep" while typing on your Atari 600 or 800XL, you can turn it off by typing

POKE 731,1

If you want the sound back, turn it back on with

POKE 731,0

You can also save your ON/OFF button from excessive wear when you have to turn it off and back on to run certain programs. Type POKE 580,1

and press the RESET key.

JEREMIAH SHIMSHAK

Holmen, Wisconsin

WILL \$40 GET YOUR KID INTO HARVARD?

PROBABLY NOT. BUT IT WILL IMPROVE SAT SCORES.

The SAT is an exam. And like all exams, it can be studied for. The best prepared students get the best scores and go to the best colleges. We'd like to help your children get the scores they deserve.

“Preparation courses improve SAT scores.”

Educational Testing Service, creators of the SAT, quoted in USA TODAY
The HAYDEN SCORE IMPROVEMENT SYSTEM for the SAT provides students with a framework for approaching the exam. The program uses a unique system that customizes instruction for each student. Your children are unique, and the Hayden course will treat them as individuals.

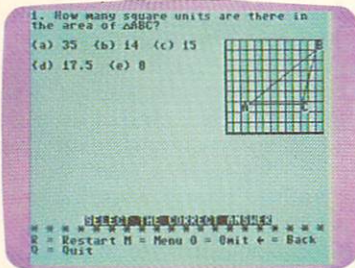

“The most complete set of explanations we’ve seen on-screen.”

Family Computing Magazine
Unlike other SAT preparation programs, the HAYDEN SCORE IMPROVEMENT System is entirely self-contained. There are no books to buy, no manuals to read, and no courses to take. The exclusive on-screen tutoring feature takes a student through a problem step-by-step, highlighting which steps should be taken to arrive at the right answer.

“The Hayden Score Improvement System will improve the average students’ score by 97 points.”

From a study at the University of Texas
Hayden has created more than an SAT program. The HAYDEN SCORE IMPROVEMENT SYSTEM covers every aspect of the exam and actually increases students’ test scores. It begins with a Sample Test module which simulates an entire exam, and gives the student a score based on the standard 800 point scale. *Using the data from the pre-test, the program automatically customizes the instruction for each student.* And the Math and Verbal Modules include in-depth coverage of every section of the SAT exam.

Each of the three modules has sold separately for \$40. Now, the HAYDEN SCORE IMPROVEMENT SYSTEM, which contains all three modules, is available for \$40.* *Isn't a better score on the SAT worth \$40?*

Available for: Apple II series, Apple Macintosh, Commodore 64/128 and IBM PC computers. You can find the HAYDEN SCORE IMPROVEMENT SYSTEM for the SAT at your local retailer or order direct from us. Call 1-800-826-0706. Illinois residents call 1-800-826-1330. Only MasterCard, VISA and American Express accepted for phone orders.

*The Macintosh version is priced higher than \$40.

HOME-SCHOOL CONNECTION

BRIDGING THE TECHNOLOGICAL GENDER GAP

How to Get a Reluctant Daughter Interested in Computers

BY PEGGY SEALFON

"I gave my son a computer. It never occurred to me to give my daughter one," admits a father of two teenagers. Like many other parents, this father assumes computers are more appealing to boys than they are to girls. In part as a result of this assumption, girls are subtly influenced away from computers. By the time females reach their teenage years, many have already concluded that computers are unfeminine and strictly for the birds—and for boys.

Sandy, a high-school sophomore, was given a class assignment to use Dow Jones News/Retrieval. She reserved time at the computer media center during one of her free periods, but when she arrived at the appointed time, a boy was sitting at her assigned computer. Too intimidated to ask him to leave, she waited by the door, hoping he would finish. He didn't, and she never got to use the computer or fulfill her assignment.

The consequences of the "computers-are-for-boys" attitude may become painfully apparent when girls begin to enter the job marketplace of tomorrow. If girls shy away from computers now—and a national survey reveals that girls avoid computer usage as much as 80 percent more than boys do—they may well be limiting their career options for tomorrow.

PEGGY SEALFON, a freelance writer, was project director of a New Jersey state project entitled "Computers: A Strategy for Equity."

WHAT'S THE TURN-OFF?

So what's a parent to do? First, understand the problem: When given free time or elective choices, many girls avoid the computer.

Why are girls turned off? For many youngsters, initial exposure to computers has been through computer games. Frequently, such software features science-fiction encounters with death-dealing aliens, star-war battles, or fast-action sports that appeal more to boys than to girls.

Studies indicate that girls tend to be more people-oriented and to prefer programs that offer a tangible end product. A national 28-month project, concluded this year, called the Computer Equity Training Project, has shown that boys will play at the computer just for the fun of it,

while girls usually want the computer to do something *for* them. According to the study, girls are typically more social and prefer working in groups rather than individually interacting with machines.

In some cases, early educational experiences have made matters worse by relegating the computer to science, math, and programming, areas in which girls may be somewhat phobic. The stereotype of the student who excels at computers calls to mind the male math genius who wears thick eyeglasses, dresses in disheveled clothes, and is dubbed a "nerd." Many young girls exploring their identities as they reach puberty are afraid of any association with computers for fear of being thought of as a "geek" or "weirdo."

Another problem some girls report has been the aggressiveness from boys who physically capture computer time. When one 9-year-old girl was asked why she didn't use a computer at home very much, she responded: "My brother won't let me. He beats me up if I go near it."

ADVICE FOR PARENTS

To help reluctant girls become more comfortable with computers and to entice them to the keyboard, parents might try some—or all—of the following strategies:

1. Give positive messages early. Don't make "male" toys taboo. At a very young age, provide your daughter with mechanical toys like robots and trucks and other nontraditional

CHECKMATE.

SARGON III. THE ULTIMATE IN COMPUTER CHESS.

Selected by the
Public Broadcasting System
as the Official Chess Program
for the
1986
World Chess Championships.

"This is the finest chess program on the market."

Family Computing Magazine

"If you are going to lose, you might as well lose to the best: Sargon."

PC Magazine

"This chess program plays well enough to beat about three-fourths of the members of the U.S. Chess Federation."

Games Magazine

"A tremendous program . . ."

A+ Magazine

"An excellent personal computer chess program."

MacWorld Magazine

SARGON III is available for: Apple II series, Apple Macintosh, IBM PC and Commodore 64/128 computers. You can find SARGON III at your local retailer or order direct from us. Call 1-800-826-0706. Illinois residents call 1-800-826-1330. Only MasterCard, VISA and American Express accepted for phone orders.

HOME-SCHOOL

female toys. She may eventually turn away from them, but at least she'll learn to make her own choices as she develops.

2. Break down sex stereotypes. Encourage your daughter to get involved in atypical female activities. If the toaster needs to be fixed or the oil in the family car needs to be changed, have your daughter participate in the process.

3. Keep home chores reasonable. Daughters are often saddled with responsibilities from babysitting to housecleaning that keep them from taking part in after-school activities. Allow—and even encourage—your daughter to join an after-school computer club or simply to use the school's computers after hours. Arrange to give her some free time.

4. Review computer courses. Check out computer courses being offered in your daughter's school that will expose her to basic applications of computers. Learning how to program is secondary. After all, when we learn to drive a car, we don't have to know how the engine works—just how to operate it and use it to take us where we want to go. If your daughter *does* seem interested in programming, encourage her to take advanced courses or consider sending her to a computer camp during the summer.

When Anne Haffner, 16, of Scarsdale, New York, was a freshman, she signed up for an introductory computing course—just to give computers a chance. "My parents had just bought my sisters and me a computer to use for educational purposes, but I wasn't using it. When I saw people programming, I thought 'How tedious! How could they sit there?' But I decided to give computing a try, since it was only a 3½-month class." Much to Haffner's surprise, she loved the class, excelled in it, and is currently enrolled in an advanced programming course.

5. Discuss career options. Initiate conversations about careers. Talk about computers and how they are being used. If you use one in your work, be sure to discuss your experiences. Haffner, currently a junior at the School of the Holy Child in Rye, New York, said her parents would like her to pursue a career involving computers. "My parents see me fiddling with the computer, and they think it's great. They encourage me to look into a computer-related career because it's important to

Available for Apple // Series and IBM PC (and compatibles). Apple // is a trademark of Apple Computer, Inc. IBM PC is a registered trademark of International Business Machines Corp.

requires 256 K, one double-sided disk drive, Color Graphics adapter. Color monitor recommended.

them—and it's important to my school—that I do something that I enjoy."

6. Allow equal access to the computer(s) in your home. If you own a computer, make sure everyone has access to it. "Everyone in our house can use the computer at any time—except if I'm using it, of course," laughed Tan Summers of Metairie, Louisiana, a mother of six. "If I'm playing *The Bard's Tale*, the family is welcome to watch!"

Studies have shown that computers are often situated in a father's work area or a son's room, which may be off-limits for daughters. Locate your computer in a central area. If the "boys" of the family begin to hog computer time, create and monitor a sign-up sheet to equalize usage.

7. Make sure mothers learn to use the computer. Mothers can set examples for daughters by enrolling in a basic computer course and making use of the family computer for work, household tasks, and creative ideas. Since Tan Summers is a freelance writer and does all of her writing with a word processor, she is being a positive role model for her four daughters.

8. Explore a variety of applications. Give your daughter a sense of the exciting range of computer activities and projects through real uses. Use a word processor to write letters. Use

GIRLS & COMPUTERS: SOME REVEALING STATISTICS

- A study concluded in February 1986 by the Computer Equity Training Project of the Women's Action Alliance—a national, 28-month project on computer equity for girls—showed that boys accounted for 74 percent of students who voluntarily used computers after school, in three schools that were part of a pilot.

- A 1986 report for a computer equity grant project at the South Brunswick Board of Education in New Jersey showed that the boy-girl ratio of free-time usage of the library computer center at the middle school during '85-'86 was 5 to 1.

- A 1984 report by the Project on Equal Education Rights (PEER) found that boys outnumbered girls 2-to-1 in high school computer programming class enrollments in three states.

- In 1983, sociologist Marlaine Lockheed found that 40.8 percent of the boys at Princeton High School used school computers in their free periods in school while only 8.3 percent of girls did.

a data-base management system to keep track of records, videocassettes, recipes, books, etc. Try out an electronic service for research. With a graphics program, you can design holiday greeting cards or create original artwork.

And don't forget that game playing is an activity your daughter is sure to enjoy; you just have to find the right types of games. "My 15-year-old daughter, Laurel, loves to play games," said Summers. "She really enjoys the Infocom games, such as *The Mind Forever Voyaging* and the *Zork* series. They're quiet, thinking games. Laurel also likes games that have pretty music and nice scenery. She *doesn't* like the shoot 'em ups."

9. Stress the ease of homework. Encourage your daughter to use her computer to help her with her homework. Emphasize how much more easily she can write and correct reports, illustrate term papers, research, and keep track of data. If she doesn't have access to a computer at home, suggest that she use a school computer during free periods.

10. Encourage girls to work with friends. Suggest that your daughter get together with several friends to use a computer (either at home or at school). By encouraging girls to work in groups, parents can help shift peer pressure in support of computer usage. After all, if a girl's friends are computer users, then it's OK—and maybe even "cool"—if she is.

Said Summers: "My 11-year-old daughter, Cherry, has a best friend who is a computer fanatic. She comes over to our house to play games, and they swap games back and forth. On the other hand, when my 9-year-old son, Howard, brings his friends over, they usually don't go near the computer."

Finally, and most important, examine your own attitudes closely. Pay attention to the signals you're giving your daughter. The father who gave his son but not his daughter a computer was, by his very actions, restricting his daughter's expectations of her own place in the computer revolution. Keeping your eyes sensitized to seeing the gender gap is sometimes difficult, but worth it. Ultimately, you'll discover your daughter availing herself of rich opportunities as a well-adapted student of today and as a thriving citizen in the technological world of tomorrow. ☐

Want to Master High School Math?

THEN YOU NEED THE MOST
EFFECTIVE HIGH SCHOOL MATH
SOFTWARE EVER DESIGNED

HIGH SCHOOL MATH SERIES

IBM PC / PC jr / COMMODORE 64

APPLE II SERIES

Each package in the Intelligent Tutor series is complete and self-contained. Each is designed to help students review and master basic principles and concepts, develop their problem-solving skills, and build their confidence.

ALGEBRA 1

Designed for a one-year course in elementary algebra. Comprehensive coverage of all major topic areas, including review of arithmetic; fundamental operations; solving algebraic equations; polynomials; factoring; radicals; exponents; quadratic equations; graphs; coordinate geometry; functions; word problems; etc.

GEOMETRY

Designed for a one-year course in plane geometry. Comprehensive coverage of all major topic areas, including angles; parallel lines; theorems; proofs; constructions; congruent and similar figures; figures involving triangles, circles, and parallelograms; word problems; etc.

ALGEBRA 2

Designed for a one-year course in intermediate algebra. Comprehensive coverage of all major topic areas, including review of elementary algebra; solving systems of two and three equations; functions; polynomials; complex numbers; exponents; logarithms; conics; determinants; word problems; etc.

TRIGONOMETRY & ADVANCED TOPICS

Designed for a one-year course in trigonometry and other topics taught in higher level high school math courses. Comprehensive coverage of all major topic areas, including introductory and advanced trigonometry; binomial theorem; progressions; graphs; word problems; vectors; complex numbers; probability and statistics; etc.

SAT MATH

Comprehensive coverage of the problem types and skills emphasized on the Math Section of the SAT. Permits students to take simulated SAT tests, see forecasts of their SAT scores, and see evaluations of their strengths and weaknesses. Helps students to develop their skills, and to improve their SAT scores.

HOME OFFICE

GIFT IDEAS FOR HOME-WORKERS

Spruce Up That Make-do Office with Something Bright, New, and Useful **BY KAREN KANE**

Most home offices are put together piecemeal, using old furniture found in attics or purchased at tag sales. While this is certainly the cheapest way to get started, rusty metal bridge chairs and flickering desk lamps become unacceptable the more time one spends with them. If you know someone working in a makeshift office, the holiday season is an ideal time to surprise him or her with a bright new object to spruce up the surroundings.

People's work habits are often peculiar and always particular. To choose the right office gift, fish for ideas and drop subtle suggestions to see what kind of reaction you get. Look around the home office and note what's missing or in bad shape. If you can, watch people while they work. Do they fidget in their seats, squint or rub their eyes from improper lighting, or constantly shuffle disks and papers around in a disorganized mess?

These clues can lead you to the perfect gift. Here are just a few of the products available to make any home office more comfortable and complete. (For more shopping tips and ideas, refer to "Setting Up Your Home Office," in the July 1986 issue.)

FURNITURE & LIGHTS

The most important piece of furniture in an office is the chair. The Rolls Royce of ergonomically designed office chairs comes from Herman Miller, Inc. The Ergon Operational Chair (\$500-\$1,300) and Equa low-back work chair with arms (\$485-\$1,200) are a far cry from a rusty bridge chair and can be customized with any option—from pneumatic adjustments to leather upholstery. Even if you can't afford a Herman Miller, test one out and then shop for the features you find most appealing, at prices that are comfortable, as well.

Most office-supply stores have

KAREN KANE is the technical associate of FAMILY COMPUTING. She wrote "History Meets Technology" in the July issue.

A sampling of practical gifts suited for the home office.

good ergonomic chairs, with five-pronged bases, a back rest, and seat controls. Prices for these ergonomic chairs start at about \$100. For under \$100, you're more likely to get a less sturdy "typing chair."

Another comfortable seating option is the Back Chair from RAM (\$30). This inexpensive clone of the Danish Balans Chair lets you sit (or more accurately, kneel) in such a way that your weight is distributed between your legs and back. The chair also has wheels.

One product that few people think of is a footrest. But it certainly helps circulation in the legs. The Footrise adjustable footrest (\$30) and the Foot Flexer with vibration (\$70) from Computerise Inc. can reduce pressure on the legs and help relax the whole body.

A workstation should have both background light and an adjustable area (desk) lamp. The Electrix Halogen Lamp, available from Sharper Image (desk model, \$99, floor model, \$149), is specially designed to enhance a work area and occupy little space. Its fully adjustable arm lets you direct light exactly where it's needed. According to the manufacturer, the energy-saving light produced by this lamp is the closest ap-

proximation to natural sunlight available, and it reduces glare on the desk and computer.

TELEPHONES

Some people "live" on the telephone, and fancy new phones designed for various needs are one of the hot product areas this year. Here are just two of many choices.

The Free Hands Telephone Headset from Global Computer Supplies enables you to use both hands for your work while talking on the telephone. It comes with cushioned earpads, plugs into modular phones, and lets you alternate between a headset and conventional receiver by flipping a switch (\$44.95 for one-ear sound, \$64.95 for two-ear sound).

Sharp Speakerphone (\$89) is a sleek two-way speakerphone that lets you carry on telephone conversations without lifting the receiver. You can also program it to dial your 20 most frequently called numbers.

DESKTOP SOFTWARE

Buying software for someone else can be a bit tricky. Be sure you know their computer model and the amount of memory it has, and look carefully at the requirements of the software. One type of software that

HOME OFFICE

is sure to please is a memory-resident desktop organizer—a program that resides in a corner of memory and lets you run other programs until you need to make a note, phone call, or calculation. (See the MS-DOS column in *Machine Specifics*.)

The granddaddy in this category is *SideKick*, from Borland International Inc. (\$85-\$100; for IBM PC/PCjr and compatibles and Macintosh). *SideKick* includes a notepad, calculator, calendar, appointment scheduler, auto dialer, and directory.

Traveling SideKick (\$70; for IBM PC only), a companion to *SideKick*, comes in a vinyl binder with a solar calculator, dividers, forms, and a pen, so a traveling executive can record information while away. Later, the data can be input into *SideKick*.

Pinpoint (\$88; Pinpoint Publishing) is a desktop organizer for the Apple IIc, enhanced IIc, and IIcs. It lets you print any text from the screen, turns your printer into a typewriter, lets you dial your modem, and more.

KEYBOARD OVERLAYS

If you know what software someone has, you can enhance his or her desktop with keyboard overlays that make using the programs easier. However, such a gift only makes sense for someone who can't always remember all the commands to a seldom-used program. Keyboard overlays also help people who are just

learning a program.

The Microref Keyboard Templates from Educational Systems, Inc. include a complete listing of commands and illustrated function keys available for Lotus' 1-2-3, *Multimate*, *WordStar*, *PC/MS-DOS*, *dBASE III*, *WordPerfect*, *DisplayWrite 3*, and *SideKick/Superkey*. You get three strips for \$14.95 or five for \$19.95.

Cheatsheet Products, Inc. has more than 50 keyboard overlays available for the C 64, 25 each for Apple IIe and IIc, and several for the C 128. The latter batch includes *BA-SIC 7.0*, *PaperClip 128*, and *Wordpro* Cheatsheets (\$7.95 each).

Systems Management Associates, Inc. has PC-DocuMate overlays (\$14.95 each) for business applications software on the IBM PC, PC/XT, PC/AT, AT&T 6300, and Apple IIe computers.

GADGETS & ACCESSORIES

A lot of people like to buy the main-office items (desk, chair, computer, etc.) themselves. If so, look for a friendly gadget that they wouldn't otherwise think of.

The Pyramid by Innovative Technologies holds up to 24 5.25" disks and is ideal for professionals or students on the move. The triangular nylon case can be propped up to display disks and folds flat with velcro closures for easy portability. The Easel is a similar case for 3.5" disks (\$20-\$22).

The Automatic Beverage Warmer from Brookstone plugs into any outlet to keep the busy executive's coffee steaming hot (\$27.50). The warmer is great for a home-office coffee break, but liquids should be kept away from computer equipment.

Sanford manufactures Diskrite Markers, pens for writing safely on disks. Choose from silver, gold, red, green, and blue models (\$2.50 each).

The Anti-Static Mat (\$9.95) from ACCO will help drain the static electricity from you body when you touch it with your finger. It's small enough (2 1/4" x 4 1/4") to place just about anywhere.

The THiNgi copy holder from Sum-Pro International, Inc. (\$14) attaches with velcro to the top of any monitor. The plastic arm extends to the side of the monitor where you can clip your manuscript copy or notes as you type at the keyboard.

The Solid Oak Wastebasket from Exeters (\$39) includes brass rivets

"My computer just talked to me!"

Introducing Scholastic's Talking Text Writer. The amazing "talking" word processor that helps teach reading and writing.

Children's early attempts at reading and writing have a strong impact on their ability to learn.

That's why Scholastic developed the Talking Text Writer for your Apple. The amazing "talking" software that, with the Echo™ speech synthesizer, *sounds out* every letter, word, sentence or paragraph that your child types, in a clear, precise voice.

Five years of nationwide research in hundreds of classrooms has shown that Talking Text Writer can significantly improve your child's reading and writing skills.

An infinitely patient teacher.

Children learn through repetition. With this incredible software, children not only *see* what they are writing. They also hear every single letter, word, or whole story repeated back to them—as many times as they need to begin to read and write. So they never have to feel embarrassed if they don't learn something the first time.

Never before have children had so much fun exploring language. Which means with Talking Text Writer they want to spend more time learning to read and write.

Talking Text Writer is truly a learning tool for all ages. It has a "Big Type" letter display in a rainbow of colors that makes it the ideal word processing program for younger children. And 40- and 80-column display for older learners.

There's never been a better children's word processor.

And it comes with an Activities Pack, crammed with fun learning ideas and a disk full of classic children's stories specially selected by Scholastic for your computer to read aloud. Each story comes with its own beautifully illustrated text so your child can follow along and hear each word come alive.

Talking Text Writer (for Apple IIe/128K and IIGS) costs \$249.00 for the software, the Scholastic Echo™ speech synthesizer, and the special Activities Pack.

We think it's a small price to pay to give your child a love of reading and writing that will last a lifetime.

Works with the 128K Apple IIe and IIGS.

HOME OFFICE

for a nautical look. It adds a touch of class to a messy office.

For a very professional looking set of office accessories, don't miss Teakwood Computer Accessories from Kalmar Designs. The Disk File Cabinets for 5.25" or 3.5" disks hold from 45 to 110 disks and come with four or eight tab dividers. All five have attractive roll-top covers (\$24-\$55). Kalmar also sells teak printer stands, monitor turntables (\$40-\$65), and CPU stands (\$50).

Clean-it and fix-it kits also make great gifts. The Case for Computer Care (\$50; PerfectData) is packaged in a molded plastic case for easy portability and storage. It includes kits to clean disk-drive heads, printer heads, printer platens, and the CRT screen.

For the handyman/woman, the JTK-9 Personal Computer Service Kit (\$49; Jensen Tools Inc.) simplifies user maintenance on personal computers and stores neatly away in a compact vinyl case. The kit includes Phillips screwdrivers, a penlight, an IC extractor, a key-cap puller, and other handy tools.

Portable Computer Support Group has a laptop computer carrying case (\$69) measuring 16" x 12" x 10". There's enough room to carry a disk drive, software, and manuals. It's made out of convertible-top canvas with leather handles, heavy duty zippers, and a padded shoulder strap.

If none of these products catches your fancy, order one of the many catalogs that stock computer-related and office merchandise and browse through them. Certainly you'll find something novel or useful for the home office worker—even if he or she is the kind of person who has everything. ☐

PERSONAL FINANCE

INTEREST-ING!

Interest Rates Affect How Much You Save and How Much You Owe. Use Our BASIC Program to Compare Rates.

BY MICHAEL W. ECKER

Imagine that you have \$10,000 to save or invest. One bank tells you that it will offer you 10 percent simple annual interest (with no compounding) each year. This means that you will get 10 percent of your principal, or \$1,000, each year for the next 10 years. The only restriction is that you keep the money in the account for a 10-year period.

Another bank, not so flashy, offers an 8 percent nominal annual rate for the 10 years, but the interest is compounded quarterly. This means that you get 2 percent interest four times a year, based on your account balances at those given four times.

Which of the two offers would you choose?

If my question makes you suspicious that the better choice is the 8 percent offer, you're right. The key lies in the fact that compounded interest garners interest not just on the original \$10,000, but also on any interest accumulated along the way. Such growth is rapid—the mathematical equivalent of a snowball rolling down a hill.

After 10 years, you'd have \$20,000 if your money was gaining 10 percent simple annual interest each year. After 10 years, you'd have \$22,080 if your money was gaining 8 percent interest, compounded quarterly. That's useful information.

However, by using our BASIC program, you'll also be able to find that for a shorter period of time—say, up to five years—the 10 percent offer actually gives a better return. That's also useful information.

The question of interest—the incentive for providing a financial institution with your money—is important in our lives. It's impossible not to be conscious of interest, which plays a big part in virtually all

DR. MICHAEL W. ECKER is a mathematics professor, the editor and publisher of the *Recreational & Educational Computing Newsletter*, and the president of *Recreational Mathematical Software*.

economic activity. Most of us maintain bank accounts, use credit cards, take out loans, or have mortgages. Yet, somehow we don't always make the best decisions. And it's usually because we don't bother to calculate the potential benefits or detriments of a given interest rate.

HOW TO COMPUTE INTEREST

Unless you use a calculator or like to make scientific calculations by hand, the simplest way to find out how much money you'll have after a certain period—or how much you will owe—is to use a standard formula (shown below) incorporated into a computer program. You can just respond to the program's simple questions and get a dollars-and-cents readout of where you stand. Here are the variables involved:

PV = principal (present value), the amount of money on which the interest is based.

R = rate, the nominal annual interest rate.

YR = time, the number of years you leave the money in the account.

N = the number of compounding periods per year; i.e., the number of times per year interest is given.

FV = the final amount (future value), or the amount of money the account will have if you start with PV dollars, invested for YR years at interest rate R, with compounding N times per year.

Thus, the formula for calculating compound interest is as follows:

$$FV = PV \left(1 + \frac{R}{N} \right)^{N \times YR}$$

RUN THE PROGRAM

Type in the program, SAVE it, and RUN it.

To start, the program will ask: HOW MUCH PRINCIPAL IS BEING DEPOSITED? Don't use dollar signs or commas (e.g., enter 10000 to represent \$10,000). Then the program will ask: HOW MANY TIMES PER YEAR IS INTEREST BEING COMPOUNDED? If your bank advertises quarterly compounding, this means that it is giving interest four times per year, so you would use 4. For daily compounding, use 365 (some bankers use 360).

Next, the program will ask: WHAT IS THE NOMINAL ANNUAL INTEREST RATE (%)? Give the interest rate without the percent sign (e.g., enter 5 to represent 5 percent). At this point, the program will give you its first re-

Using "What if?" analysis with budgeting to decide whether to lease or buy. (Version 1.1/Atari® ST)

Money.

As a source of emotional distress, few things can compete with it.

So it's nice to know that, when it comes to dealing with money, nothing competes with Dollars and Sense.®

For over three years, Dollars and Sense has been the world's best-selling way to come to grips with your financial behavior.

At home. At the office. Or both.

Dual personality.

If you yearn for user-friendliness and crave a context-sensitive helping hand, Dollars and Sense offers plenty of comfort.

Not to mention two sets of starting accounts (one for personal and one for business), a menu-driven interface and a manual that's

couched in terms even a novice can quickly come to terms with.

If, on the other hand, you seek software that can stand up to a small business, then the speed and automatic double-entry accounting that's built right in will give you a sense of power.

While the absence of copy protection will keep

you from feeling frustrated.

Achieving instant gratification.

When it's time to examine your financial profile—at tax time or any time you're in the mood—a keystroke is all it takes to generate the kind of detailed self-analysis you see at the top of this page.

Income statements, balance sheets, year-to-date summaries, cash flow

analyses and a variety of charts and graphs will bring you face-to-face with financial reality.

At which point, you may want to lie down.

(Continued from page 24)

sponse, saying, NOTE: THE EFFECTIVE ANNUAL YIELD IS XX%. (The XX's represent the percent your money actually grows in one year, and the computer will calculate and display this percentage for you.) If you experiment with the program, you'll find that the effective rate is usually higher than the nominal annual rate. Most banks list both rates in their ads.

Finally, the program will ask: HOW MANY YEARS WILL THE PRINCIPAL REMAIN IN THE ACCOUNT? If the figure is not a whole number, such as two-and-a-half years, enter a number with a decimal point, such as 2.5. If you have a number of months, such as 48, don't forget to divide by 12 to convert it to four years.

Now, the program will give you the answer you've been seeking: AFTER XX YEARS (XX PERIODS), YOU WILL HAVE ABOUT SXX.

CREDIT CARDS, BALLOON LOANS

You can apply this program to various situations, such as bank cards and balloon loans. For instance, suppose that you have a credit card that allows you to skip three months of payments. But remember that the interest you pay the bank continues to accrue. Let's say that you owe

\$1,500 and that the nominal annual rate is 19.8 percent—a high rate but a common one for many banks' MasterCard and Visa cards.

Enter 1500 as the principal. Since most of these cards compound daily, use 365 for the number of compound periods. For the rate, enter 19.8, and for the time, use .25, for one-quarter of one year. You'll see that after three months, you owe \$76 in interest, in addition to your \$1,500 debt, for a total of \$1,576.

What about a balloon loan? Some balloon loans—as contrasted with installment loans—are loans in which you repay the entire principal, plus the accumulated interest over the life of the loan, at the end of the loan period. (The formula for monthly payments for installment loans is different and mathematically much more involved.)

Suppose that you borrow \$3,000 from a financial institution and agree to repay the entire \$3,000 plus interest at the end of three years, with interest compounded daily at a 15 percent nominal annual rate. Enter 3000 for principal, 365 for the number of times interest is compounded yearly, 15 for the rate, and 3 for the number of years. Do you get about \$4,704.50?

Because of rounding, the answers from the program may sometimes differ slightly from your banker's estimate. Do not be alarmed. There are several reasons for this. One relates to rounding practices of banks. Another stems from the accuracy and precision of different computers. Using two calculators and two computers, I got three slightly different answers for the last question. (NOTE: If you enter an amount that is too large, this program may give you an inaccurate amount.)

FAST ANSWERS

You might enjoy experimenting with the program to see the effect of compounding more frequently or receiving higher interest rates, as well as evaluating the effect of different principals and time periods.

While you may instinctively know that more frequent compounding accrues interest faster, running this program will help you judge how much faster. Often, the difference is minimal and the amounts involved are minimal. But if you are carrying a big credit card debt, and 19.8 percent interest is being compounded daily, you might do well to take a closer look at the amount of money you're actually paying in interest. 

MODIFICATIONS FOR OTHER COMPUTERS

SYLVIA PORTER'S PERSONAL FINANCE SERIES MANAGES IT ALL

IBM
VERSIONS
INTERFACE
WITH LOTUS 1-2-3

**Your day-to-day finances. Your financial future.
And now, your investments, too.**

Volume 1

Your Personal Financial Planner

Helps you track your day-to-day financial data, then combines this information with your future financial objectives to produce the most comprehensive and easily-understood financial planning program available.

For Your Day-to-Day Affairs:

- **Maintains your electronic check-book** and credit card transactions.
- **Writes your checks** and balances your checkbook.
- **Prepares and monitors your budget.**
- **Classifies and tracks your taxable income and expenses.**
- **Calculates your net worth and generates customized personal financial statements.**
- **Tracks your financial assets** – and your insurance policies.

For Your Financial Future:

Leads you step-by-step through a series of questions regarding your financial goals, and your current financial condition. Your answers will enable your computer to determine and print a summary of the amounts you must save each year to meet your financial objectives – in both real and inflated dollars.

Each SYLVIA PORTER program:

- **Interfaces with the others in the Series.** You need to enter data only once.
- **Generates unique graphic representations** that display your data in colorful charts.
- **Includes a Customized Report Writer** that prints out any report you want, tailored to your specific needs.

MORE POWER FOR YOUR DOLLAR

Timeworks, Inc., 444 Lake Cook Rd., Deerfield, IL 60015

Volume 2

Your Personal Investment Manager

Whether you're a first-time investor or a sophisticated one, this program enables you to efficiently organize, analyze, and manage up to 15 individual investment portfolios. (Unlimited on hard disk)

This Program:

- **Manages your investment transactions:** Records, organizes, and classifies all important data on your purchases, sales, and other types of investment transactions.
- **Tracks your investment portfolios:** Displays more than 35 kinds of vital statistical data, plus financial profiles on individual companies.
- **Alerts you to investment deadlines:** Transaction deadline dates for dividends and interest; buy and sell positions; bond maturities; and much, much more.
- **Tracks your retirement investments**
- **Monitors your investment taxes:** Tracks, organizes and classifies your interest and dividend income, and your capital gains or losses. Generates year-end reports.
- **Includes Telecommunications Access to outside Database Sources:** Lets you access all major outside databases for automatic price updates (modem required).
- **Includes Investment Strategies and Fundamental & Technical Analyzers**

**PLUS . . .

TELECOMPUTING

1986 IN REVIEW

What's Made News on the Networks

BY SHAY ADDAMS

In 1985, the major development in telecomputing was in hardware—the advent of the 2400-baud modem. In 1986, new offerings from large information services and electronic-mail networks made the big news. Here's a look at some of the most significant developments.

HALLMARK CARDS GO ELECTRONIC

CompuServe teamed up with Hallmark Cards to introduce *Color Mail*, an electronic greeting card that combines color graphics, animation, and sound effects. (Ordinary electronic mail is restricted to straight monochrome text.) Before signing on to CompuServe, you create your own "card" with special *Color Mail* software (\$40; Apple II, Commodore 64/128).

The *Color Mail* program has 10 libraries from which you select up to five elements—backgrounds, cartoon characters, sound effects, and musical themes—and position them on the screen. Some graphics may be animated to move slowly across the screen. You can also type in a personalized message and "paint" portions of the card with your choice of 16 colors. "Happy Birthday" and nine more standard messages are already on the disk.

After the card is complete, you SAVE it on a disk, sign onto CompuServe, and send it via the EasyPlex mail facility (at a charge of \$.25 per card).

To receive *Color Mail*, you work in reverse. SAVE the card to disk, load the file into your own *Color Mail*

SHAY ADDAMS is editor of *Questbusters*, a gaming newsletter. He also wrote the Commodore column in *Machine Specifics* and "Disk Drive Detectives" in this issue.

An electronic greeting card created with Hallmark's *Color Mail*.

software, and view it after signing off the network. The greeting is recreated before your eyes.

You can view (but not create) a greeting card if you don't own *Color Mail* software by downloading a program from the *Color Mail* Exchange Forum on CompuServe.

Also in this Forum are libraries containing fresh graphics and other effects—the Murderous Mystery Libraries have laughing skulls and a Psycho shower stall, Celebs I and Celebs II have caricatures of everyone from Whoopi Goldberg to Rambo. Each library costs \$3.50-\$5.

In other electronic mail news, CompuServe linked its EasyPlex facility with MCI Mail, enabling subscribers of either service to send mail to people on the other. MCI also linked up with the DEC Email service, "All in One," so those users can

also send mail to CompuServe users. Thus, if you subscribe to CompuServe, DEC, or MCI, you can send electronic mail to over 500,000 people. (With MCI Mail, you can also send mail by computer that is printed and delivered as paper mail to anyone in the world.)

Finally, AT&T Mail, used mostly by corporate subscribers, has a Mail-Talk feature that lets you listen to your messages over a touch-tone telephone. Punch in your user name and a password and you'll hear a synthesized voice read your mail. The tinny voice sounds a bit like the robot from "Lost in Space"—"Danger, Will Robinson!"

WANTED—DEAD OR ALIVE

Ever wondered what the people you're "conferencing" with look like? Members of QuantumLink, the Com-

"Online computing costs had me scared stiff..."

"With GENie™ I found adventure online for less!"

\$10.00+ per hour

\$5 per hour

Most online information networks can freeze your computing budget faster than you can say "Help!" Not so with GENie, the General Electric Network for Information Exchange. As part of the world's largest commercially available teleprocessing network of General Electric Information Services Company, GENie lets you experience all of the fun and excitement that online computing has to offer.

Evenings, weekends, holidays. Just \$5 per hour.

With GENie, you can make friends, set up travel reservations, get the news, be entertained, even shop for a fraction of what other information services charge.

And you get a lot more for your money.

With GENie's **RoundTable™ Special Interest Groups** you can discuss the latest in computing products and accessories; download hundreds of public domain software programs, and participate in exciting and informative online conferences. And, uploads are FREE on GENie! **There's more!**

Meet friends old and new with GENie's **LiveWire™ CB Simulator** or exchange messages with GENie's **electronic mail** service. Schedule a trip with **American Airlines travel service**. Fun and learning for the whole family with **Grolier's electronic encyclopedia**. Play multiplayer

and classic games in GENie's **Game Room**. Get the latest in domestic and international **computing news**. All this and there's more to come. New services are being added each and every month!

Only \$18 to register! Save up to 60%!

Check out the chart. Compare the savings for yourself. You'll find GENie delivers all of your favorite services for an incomparable price, at incomparable savings.

Compare & Save	Services						Pricing			
	Travel & Shopping	SIGs/User Groups	Electronic Mail	CB Simulator	News	Games	Registration Fee	Monthly Minimum	Non-prime time rates	
									300 baud	1200 baud
The Source	X	X	X	no	X	X	\$49.95	\$10.00	\$8.40	\$10.80
CompuServe	X	X	X	X	X	X	\$39.95	none	\$6.00	\$12.50
GENie*	X	X	X	X	X	X	\$18.00	none	\$5.00	\$5.00

*Rates and Services shown in effect 9/86. Non-prime time applies Mon.-Fri., 6pm-8am local time, all day Sat., Sun., and not 7 holidays. Subject to service availability. Additional surcharge applies for 2400 baud service.

With services and savings like these, now you can discover the adventures of online computing without the fear of paralyzing high costs. Get online with GENie. Sign up today!

Sign up from your keyboard today. 4 Easy Steps:

1. Have your Visa, MasterCard or checking account number ready.
2. Set your modem for local echo (half duplex)—300 or 1200 baud.
3. Dial **1-800-638-8369**. When connected, enter HHH
4. At the U#= prompt enter **XJM11919,GENie** then RETURN.

Need help or more information? No modem yet? We can help. Call **1-800-638-9636**.

GENie™

Stay online longer, for less.

INFORMATION SERVICES

General Electric Information Services Company, USA

GENie rates and services subject to change. Uploads are free during non-prime hours at 300 or 1200 baud. Third-party services offered on GENie may include additional charges.

ZEPHYR's

EXCLUSIVE SOFTWARE

Good Software! Great Prices!

For YOUR
APPLE II+ /IIe/IIc IBM PC/XT/JR
Pick the Ones YOU Want:

□ **FINANCER™**—10 most needed financial calculations in easy to use package. Menu selectable for: amortization schedule, present values, future values, simple & compound interest, installment loan, days between dates, & more. Output to screen or printer. "FINANCER is best"—G.W., Montana \$19.95

□ **MUSICMAN™**—Compose music on screen, placing notes, rests, sharps, flats on musical staff. Vary key, pitch, tempo & legato to perfect your music. Save your compositions to disk to replay or revise later. Comes with musical selections. 80 column display. \$29.95

□ **ASTROSTELL™**—Learn the constellation using your computer, all 88 included. Four levels star brightness simulate sky on screen. Gives star names, positions of galaxies, nebula, etc., plus lore & observing tips. 80 column screen. "A Perfect Delight"—Prof. M.F., Minnesota. \$29.95

□ **STATCALC™**—Key statistical functions for student or experienced user. Includes correlation & regression, normal, T, Poisson, binomial, Chi-square, distributions, data handling for sorts, mean, standard deviation, range, median. Save data to disk. Manual explains statistics and program use with examples. \$39.95

□ **HOROSCOPICS™**—For your birthdate and time the exact sky conditions are calculated and horoscope chart printed out, with zodiac, sun, moon & all planets. Includes astrological reading, sun & moon sign, ascendant, conjunctions & oppositions. \$24.95

□ **BIO-DATA™**—Calculates Biorhythms for any time period you specify and displays on screen or to printer. For your birthdate gives celestial longitude of sun and your astrological sign. Determines Julian Day #, days since birth & day of week for birth. \$19.95

□ **VOCABULATOR™**—Improve your vocabulary at selectable skill level, from high school to sequepdalian. Use multiple choice or quick review mode. Add words you want included. "Recommended: Excellent Program"—Electronic Learning Mag \$29.95

□ **SUPERCAT™**—Professional level cataloging for up to 5,000 books per directory with hard disk or 1000 per floppy (400 for Apple). Multiple subjects & authors, call #, title, publisher, etc., plus fields to customize. Print 3x5 index cards & reports in various formats. Sort and retrieve data by any field. Fast and easy to use. \$49.95

□ **CATMAN™**—Catalog your books, records, tapes with ease. Store author, title, and subject for up to 3000 item per floppy (1500 for Apple). Use search options to to get listings on screen or printer. Your choice if full power of Supercat not needed. \$19.95

□ **HEADLINER™**—Print banners and signs on any 80 or 132 column printer in letters up to 13" high (smaller sizes, too). Any length headline. Great for parties, kids, offices, stores. Get your message across! On PC MAG Holiday '85 Wish List. \$19.95

modore-only network, can download picture files of each other from a data library called the Photo Gallery. First, they send in photos of themselves, which are digitized by Q-Link and stored in the Gallery. The pictures can be viewed or printed with free software that is also downloaded from the system.

CompuServe also has digitized photos on-line—some are even from the FBI's most wanted list!

PRICES SLASHED

Lower connect-time rates in 1986 made computer communications more affordable. American People/Link's rates for non-prime time (6 p.m. to 7 a.m.) are down to \$4.25 per hour, and for local Chicago access this rate applies 24 hours a day. The charge for 1200-baud is \$4.95 per hour, and for 2400-baud, \$6.95. PLINK regularly announces special "PartyLine" rates of \$3.49 per hour and "Happy Hour" rates as low as \$1.99.

GEnie only charges \$5 per hour for non-prime hours (300- and 1200-baud; \$15 per hour for 2400-baud). Delphi charges \$7.20 per hour for non-prime usage, even for 2400-baud. While you still pay \$12.50 for 1200-baud usage on CompuServe, the system recently stopped charging for the connect time while you upload files in any of the data libraries.

PBS FUND RAISING

Delphi Boston (a local version of the national network) participated in the world's first "modem-athon" when they helped WGBH, the PBS station that produces the Nova series, raise money. The on-line auction was conducted simultaneously with the station's television fund-raising events. Deemed a success by both parties, the fund-raiser is on next year's schedule.

While Delphi has a local offshoot, CompuServe signed an agreement with two Japanese companies that will market and support the service in its existing form in that country. Right now there are only 750 subscribers in Japan. The two Japanese firms will also develop their own version of CompuServe in Japanese.

EASY ON, EASY OFF

EasyNet simplified the task of searching specialized data bases such as Dialog, BRS, NewsNet, and

Magazine Index. Instead of forcing users to learn the idiosyncracies of each system's commands and protocols, EasyNet provides a "gateway" (to over 700 data bases) that relies on menus. You can choose the data base to search, or just pick a topic—and let EasyNet decide where to look. For the basic \$8 search fee, you get titles and bibliographic information on the first 10-15 "hits." In addition, you don't have to subscribe to EasyNet; anytime you wish, just dial 800-EASYNET, and have your credit-card information ready.

Other versions of the EasyNet system are InFact on Western Union's EasyLink electronic-mail system, and IQuest on CompuServe.

FIND DRAGONS AND WIN MONEY

Multi-player science fiction games, like CompuServe's *MegaWars*, have always been popular, but fantasy role-playing games took the lead this year. In these games, hundreds of people enter the same environment to seek dragons, explore strange worlds, and complete various quests. CompuServe introduced *Island of Kesmai*, QuantumLink put up *Habitat* (developed by LucasFilms), Delphi offered *Quest*, and GENIE did *Stellar Warrior*.

In *Quest*, players who fulfill the goal win \$100 of time on Delphi. QuantumLink and People/Link also started rewarding winners of its on-line game tournaments (chess, backgammon, and others) with free time.

DOWNLOAD WILLS

One of the more notable Special Interest Groups (SIGs) that started in 1986 was LawSIG on The Source. (SIGs are relatively new on The Source.) You can download wills, incorporation and other legal forms, and post messages about or engage in discussions on legal topics. The self-help section aims to serve non-professionals as well as attorneys and paralegals.

Who knows what will happen next year. Maybe we'll be able to download a lawyer and have a face-to-face negotiation. ☐

PHONE NUMBERS

AT&T: (201) 221-2888; GENIE: (800) 638-9636; Delphi: (800) 544-4005; EasyNet: (215) 667-9026; The Source: (703) 734-7500; CompuServe: (312) 836-7374; QuantumLink: (703) 448-8700; PeopleLink: (312) 870-4260

A Great Christmas Bonus from Radio Shack

The New Tandy® 1000 EX

Complete with our Color Monitor

...at no extra charge.

Save \$299⁹⁵ **\$799**

Get real PC power in an affordable home computer

There's no reason to settle for a "game" computer this Christmas. Now you can get a Tandy 1000 EX for the price of a game machine. Best of all, you'll get a CM-5 Color Monitor (25-1023) as our gift to you when you buy the Tandy 1000 EX.

The Tandy 1000 EX (25-1050) is a true PC-compatible computer, ready to use the MS-DOS® based software you bring home from the office, as well as software designed for the home or classroom. Inside the sleek one-piece design there's a 5 1/4" disk drive, 256K RAM and a three-voice sound circuit with a built-in speaker and a headphone jack for private listening.

The CM-5 monitor features a 13" screen with 80 x 25 text and 320 x 200 color graphics. Plug it in and you're ready to start computing... because the Tandy 1000 EX even includes software!

Start computing on Christmas morning

Every Tandy 1000 EX comes with our graphics-oriented Personal DeskMate™ productivity software. Choose from valuable applications like TEXT word processing, WORKSHEET spreadsheet analysis and FILER electronic filing. PAINT, a graphic picture editor, lets you create colorful drawings and designs. There's also a CALENDAR and TELECOM communications*. Personal DeskMate even includes

great special functions like a PHONE DIRECTORY, CALCULATOR, and NOTE PAD.

And for professionals...

The CM-5 color monitor bonus is also available when you buy the 2-disk, 384K Tandy 1000 SX—the perfect computer for small businesses and professionals—only \$1199. Save \$100 on our DMP-130 dot matrix printer, too. At only \$249.95, it's the perfect complement to your computer.

Come see what's in store for you this Christmas at Radio Shack.

Radio Shack®
The Technology Store™
A DIVISION OF TANDY CORPORATION

*TELECOM requires optional modem. Prices apply at Radio Shack Computer Centers and participating stores and dealers. Tandy 1000 EX monitor platform not included (29.95). DMP-130 printer reg. 349.95. Sale begins 10/21/86, ends 12/24/86. MS-DOS/Registered TM Microsoft Corp.

MACHINE SPECIFICS

NEWS, OPINIONS, QUOTES, & RUMORS
ABOUT YOUR FAVORITE COMPUTER

APPLE

BY CHARLES H. GAJEWAY

Ah, December! Christmas is fast approaching, when Santa will perhaps see fit to slip something interesting into a stocking or under the tree. Let me share some of the neat little things that are on my Apple wish-list this year.

Way back in 1980, when software came in baggies and manuals were dot-matrix printouts, a couple of Apple wizards formed Beagle Bros Micro Software in San Diego and started selling games and utilities. From the moment I first saw their logo—two bearded faces similar to the Smith Brothers—appear on my monitor, I was hooked. Their programs and documentation perfectly captured the blend of whimsy, wonder, and practicality that is embodied in the Apple II. Here are a few good ones.

Power Print. First is *Power Print* (\$39.95), a new utility for II Plus, IIc, and IIe that enables you to design and download custom printer fonts and graphics to most dot-matrix printers (Apple, Epson, Okidata, Star, Citizen, Brother, and others). Check to make sure that your printer can download fonts. Several fonts are included with the program, as well as an editor to create truly unique fonts. Since these fonts do not use the printer's graphics mode, printing occurs at full speed, with truly striking results.

Extra K. Then there's *Extra K* (\$39.95), for 128K IIc's and IIe's. *Extra K* splits the computer into two 64K machines, taking advantage of the fact that few programs take up more than 64K of RAM. This enables you to have two programs in memory at once; use a full 64K for Apple-soft programs and store data in the second 64K; create a RAM disk for storing programs; or use both DOS 3.3 and ProDOS.

Big U. Big U is an invaluable bag of tricks for ProDOS, equally useful for the novice and the advanced user. FAMILY COMPUTING's David Hallerman reviewed *Big U* in the May issue, and he thinks that the *File Mover* program alone is worth \$34.95. I agree, although I wouldn't want to give up the 18 new ProDOS

commands, either. This program is my Apple II candidate for Bargain of the Year!

Beagle Bag. For kids, there's the *Beagle Bag* (\$29.50), a collection of low-res and text games and tricks that are endlessly entertaining and challenging enough for grown-ups to enjoy. My 9-year-old loves *Hang Person*, my 5-year-old likes to play *Sub Search*, and I like *Text-Train*. This is a classic must for any family Apple computer system.

Beagle Bros software is available from computer stores, mail-order dealers, or direct from the company (3990 Old Town Ave., Suite 102C, San Diego, CA 92110; [619] 296-6400).

Macintosh Wish List. Sorry, *Beagle Bros* doesn't have any Mac products. But, of course, some other folks do. The first on my list is *Tempo* (Affinity Microsystems, Ltd., 1050 Walnut Street, Suite 425, Boulder, CO 80302; [800] 367-6771). *Tempo* is a desk accessory that creates macros for Macintosh, enabling you to reduce very complex tasks to one keystroke. *Tempo* records mouse movements and keystrokes in the *Finder* as well as inside and between almost any application programs. Because *Tempo* records mouse movements and keystrokes, it is easy to start using right away.

The *BatteryPak* (Batteries Included; 30 Mural Street, Richmond Hill, Ontario L4B 1B5; [416] 881-9941) is a collection of nine powerful desk accessories, including a file-handling utility that allows you to manipulate files from inside an application. That alone is worth the \$49.95 price of admission; *BatteryPak* is the hands-down Mac Bargain of the Year.

Click-on. Last, but certainly not least, is the *Click-On Worksheet* (COW) from T/Maker Company (1973 Landings Drive, Mountain View, CA 94043; [415] 962-0195). COW is a classic desk accessory that provides a small but highly functional worksheet (including graphics!) inside the Apple menu. It comes complete with several very useful templates, and at \$79.95, it presents an attractive alternative to a full-scale spreadsheet program.

CHARLES H. GAJEWAY can be reached on *The Source* (ID: BBQ794).

ATARI

BY JOHN J. ANDERSON

Our leadoff tidbit this month concerns a new piece of software for the ST, from one of the biggies. Microsoft will provide *Microsoft Write* for the ST series. *Write* is based on the popular *Microsoft Word*, for the Macintosh. We are told that *Microsoft Write* will make full use of the powerful monochrome and color graphics capabilities of the ST.

The ST series would certainly benefit from the appearance of a powerful, professional, and bug-free word processor. So far, we've had to tough it out with what's available.

Southern Cal Report. Matthew Stern, a FAMILY COMPUTING contributor, saw *Write* at the Southern California Atari FEST and files this report: "I got to work with *Write* for half an hour. It has almost all the features of the Macintosh version, including multiple documents, footnotes, page layout, and headers and footers. You can even highlight entire lines at a time, just like you can on the Mac version. It doesn't have split screens, and most important, does not yet support fonts and graphics. *Write* is expected to sell for \$125 to \$150.

"Now, back to you, John."

3D-3D-3D. Have you had a chance to play with *CAD-3D* from Antic Software ([800] 443-0100, ext. 133)? I have, and my problem now is finding a way to stop. The program, written by Tom Hudson (who wrote the magnificent *D.E.G.A.S.* paint package), is a masterpiece in solid modeling and in ease of use. In about an hour, you can learn enough to experiment, create, and play for dozens of hours more.

3-D for Atari ST

How to get a helping hand from your computer without spending an arm and a leg.

Planner's Choice.
Planner's Choice will not only help the family budget. It can help plan your budget. Your stock portfolio. Your taxes, too.

Getting your computer to do a lot doesn't have to cost a lot. Not when you have Personal Choice Software. It's personal productivity software that takes on any assignment. Yet, it's every bit as affordable as it is efficient.

For example, if you want to refinance your home, Planner's Choice turns your home computer

into a spreadsheet. Simply type in the numbers and calculate the effects of different interest rates by pressing a button. You won't have to take out a second mortgage for the privilege, either. Because Planner's Choice is priced to fit any budget plan.

If you're a writer, the value of Writer's Choice is clear from the start. It includes features that some more expensive word processing tools don't.

Writer's Choice. Writing can be a moving experience with the cut and paste option. While the document preview lets you peek before you print.

Like a spelling checker and help screens. So your fingers can work the keyboard, not the manual.

Or, you may wish to begin with Filer's Choice. It's a great place to record, store and sort information in just about whatever way you please.

What's more, if you prefer to do all your shopping at once, you can own The Personal Choice Collection for a lot less than you'd normally pay for a single spreadsheet, word processing, or filing program with similar capabilities.

They also work very well together. Which means that Personal Choice Software is the perfect choice. Especially when you want hard working software — that's easy on your pocketbook.

Filer's Choice. It will sort information numerically, or alphabetically. Call up help screens. And take down reports.

Make your first choice of Personal Choice Software now and save \$5 on your next choice. And, get 5 free Memorex® disks with any purchase. A \$16 value. Look for details inside of specially marked packages.

PERSONAL CHOICE
SOFTWARE

A lot of software for a lot less.

Available for Commodore 128 and 64, Apple II series, IBM PC, PCjr, Tandy 1000 and compatibles. Commodore 64 and 128 are trademarks of Commodore Electronics, Limited. IBM PC and PCjr are trademarks of International Business Machines Corporation. Tandy 1000 is a Trademark of Tandy Corporation. Apple II is a trademark of Apple Computer, Inc. CIRCLE READER SERVICE 3

MACHINE SPECIFICS

CAD-3D provides powerful tools for creating three-dimensional objects—and for viewing these objects from different angles, distances, and perspectives. In solid and outlined modes, you can control up to four “light sources” and create accurate, automatic shading.

The results are stunning. They can be viewed on a color or monochrome monitor, and saved as entire datasets, individual “objects,” or simple screen dumps in *Neochrome* or *D.E.G.A.S.* Special tools act as a “jigsaw” or a “lathe,” to make modeling three-dimensional objects a breeze.

The current program offers an animation module, but it necessarily slows in direct proportion to the complexity of the objects it depicts. A demo disk of a new, upgraded animation package (in progress) recently crossed my desk, and it is fantastic. It allows animation at up to 60 frames per second (150 with additional hardware) and packs an amazing amount of data onto a single disk.

The capper to all this is a forthcoming option that allows you to view objects in 3-D. Yes, it requires special glasses, but before you groan, realize that we are *not* talking about red-blue or even polarized glasses here. The package will utilize high-speed liquid crystal-shutter glasses, synched to the video scan of the ST monitor.

Rumor of the month: Our informed sources say there's a new computer coming from Atari in 1987, to be called the 2080 ST. If your first instinct tells you that the 2080 is an ST with twice the power of the 1040, you're absolutely right. The 2080 ST will pack over two megabytes of RAM on board.

JOHN J. ANDERSON can be reached on CompuServe (ID: 76703.654).

COMMODORE

BY SHAY ADDAMS

Many of the questions you could ask about Commodore machines can be found in a book—the problem is finding the right book. Here's a good list to point you in the right direction.

I Didn't Know You Could Do That with a Computer! includes nearly

200 offbeat programs—from self-hypnosis to managing a hog farm—for the 64 and 128 (COMPUTE! Books; [800] 367-6767; \$14.95).

Home Applications and Games for the Commodore 64 (Little, Brown & Co; [617] 227-0730; \$14.95) has short BASIC listings for 30 programs—such as a credit card manager and a calorie counter. The *Working C 16/Plus 4* consists of BASIC listings for pie chart graphing and other programs (TriMicro; [800] 826-4859; \$14.95).

Printer Problems? Read *The Printer Book* for the C 64/VIC 20 before you shop for a printer. The book is also helpful if you've got a printer and are having interface nightmares or you want to adapt your own programs to work with it (Abacus Software; [616] 241-5510; \$19.95). For do-it-yourselfers with disk drive trouble, the *Commodore 1541 Troubleshooting and Repair Guide* offers technical assistance (Sams; [800] 428-SAMS; \$19.95).

If you want to learn how to program, look for these books: *BASIC Commodore 64 BASIC* (Hayden; [800] 631-0856; \$17.95); *COMPUTE!'s 128 Programmer's Guide* (COMPUTE!; \$16.95); or *Elementary Amiga BASIC* (COMPUTE! Books; \$14.95). Experienced programmers can consult *The Commodore 128 Programmer's Reference Guide* (Bantam; [212] 765-6500; \$24.95), which covers BASIC 2.0 and 7.0 commands, DOS, machine language, CP/M, memory map locations, and other technical data. *The Black Book of C 128* (Value-Soft; [800] 544-SOFT; \$15.95 plus \$2 shipping and handling) has memory maps and explains BASIC, CP/M, and the internal workings of the 1541 and 1571 drives. A *GEOS Programmer's Reference Guide* will be out in January (Bantam; \$19.95).

Amiga Books. Written by a member of the Amiga development team, *The Amiga Programmer's Reference Guide* speaks authoritatively on the subject (Sybex; [800] 227-2346; \$28.95). The *AmigaDOS Manual*, prepared by Commodore Amiga's technical staff, covers DOS commands, technical data on the hierarchical filing system, and includes a developer's manual for C and assembly language program development (Bantam; \$24.95).

Big Game Season. We're approaching the height of game sea-

Hard-Working Software.

Waldenbooks introduces practical, educational, skill-developing and productivity-improving software for your personal computer.

1. **America Cooks Italian CDA.** This great cookbook on a disc helps you prepare memorable Italian dishes. For IBM, Apple, Commodore-64. Also available: America Cooks Chinese, America Cooks Mexican. \$14.95 each.

2. **Bridge Baron™ Great Game Products.** The strongest computer bridge playing program for major computers. For IBM, Apple, \$49.95 each; Commodore-64, \$39.95.

3. **Turbo Pascal® Borland International.** The fastest Pascal development environment on the planet. Extraordinarily useful and versatile. For IBM, \$69.95.

4. **Print Master™ Unison World.** Brings out the graphic artist in you. Over 100 graphics, border designs, type fonts and styles. Easy to use. For IBM, \$49.95; Apple, \$39.95; Commodore-64, \$34.95.

5. **Venture's Business Simulator™ Distributed by Electronic Arts.** Puts you in the president's chair of a dynamic new company and challenges you to make the right decisions. Tough, realistic and educational. For IBM, \$69.95.

6. **Create With Garfield®. DLM Educational Software.** Design your own cartoons. Select props. Set up scenes. Print posters, labels and cartoons. Fabulous fun. Apple, Commodore-64, \$29.95.

7. **Ski Writer®. Mastertronic.** A new generation of word processing software. Incredibly fast and easy to use. Ideal for personal and small business use. Commodore-64, \$14.95.

8. **My ABC's Paperback Software™.** Simple to learn and fun to play. Six educational games combine music and outstanding color graphics to educate and entertain your child. For IBM, \$19.95.

9. **Cardware High Tech Expressions.** Make it easy to design and print your own greetings cards for any occasion. Plus a unique greeting disk for celebrating birthdays, musically. For IBM, Apple, Commodore, Atari. Also available: Heartware, Warewithall, \$9.95 each. Partyware, \$14.95.

10. **Silent Service Microprose.** Ultra-realistic simulation of submarine warfare in World War II. "Reality levels" allow you to determine complexity of mission. For IBM, Apple, \$34.95 each.

11. **Certificate Maker Springboard.** Over 200 professionally designed certificates to choose from — ideal for employee awards, family celebrations, church and school functions. For IBM, \$59.95, Apple, \$49.95.

12. **World Games EPYX.** A challenge of global proportions for 1 to 8 players. You'll compete in 8 impossible events around the world, from death-defying cliff diving in Mexico to sumo wrestling in Japan to bull-riding in the U.S. to weight-lifting in Russia and more. For IBM, Apple, Commodore. \$39.95 each.

All you need is the right software to keep your computer busy helping you and your family become more knowledgeable and more productive.

You can learn how to cook, type or print graphics. Your children can

improve their skills in math and language.

Waldenbooks carries a variety of software programs for all interests, from science and music to home productivity.

And if you can't find the program

you want, we can special order it for you from the thousands of titles available.

At Waldenbooks, you'll not only find hard-working software, you'll also find the software that works best for you.

THE ATARI
TEN COMMANDMENTS

IV

"We shall create a computer that lets consumers choose what's right for them." *John Tramiel*

Some of our competitors insist that you do things their way. IBM®, for example, forces you to use command keys. And Apple®, forces you to use a mouse.

The revolutionary 1040ST™ Computer gives you both.

If you feel more in command with command keys and a professional keyboard, the ST™ has them. If you feel more comfortable with the immediate response of a mouse, the ST Computer has that also.

The 1040ST takes 16-bit, 68000 technology to its limit. It is two to four times more powerful than the

Macintosh™ or the PC AT™ And far faster as well.

And you get all the power and performance of the ST for an incredible \$999.

Which is why more and more people are choosing the ST Computer everyday.

The ATARI 1040ST is at your computer retailer now.

ATARI®

© 1986, Atari Corp. ATARI, ST, & 1040ST are TM's or reg. TM's of Atari Corp. Apple is a reg. TM of Apple Computer, Inc. IBM & AT are TM's or reg. TM's of International Business Machines Corporation. Macintosh is a TM licensed to Apple Computer, Inc.

IBM

BY PHIL WISWELL

IBM has introduced a new version of its XT personal computer called the PC/XT 286, so named because it uses the INTEL 80286 chip, the same chip at the heart of IBM's PC AT (\$5,295). The basic PC/XT 286, which comes with 640K, a 1.2-mega-byte floppy-disk drive, and a 20 Mb hard-disk drive, sells for \$3,995.

Is it an XT or an AT? That depends on how you look at it. The new computer can power several remote terminals like an AT. And its internal memory can be extended to 12.6 megabytes, also like an AT. But

Better Than RISK™

Power—you know you love it.

You used to play *RISK* as a kid. Maybe you still do sometimes — whenever you can get enough people together.

Did you ever wish you could play by yourself? Or make changes in the map? Wouldn't it be great if you could attack North Africa from North America? Or Japan from Brazil?

Announcing *Lords of Conquest*™ from Electronic Arts.

It isn't RISK... it's better.

It's a conquer-the-world board game that explodes with new life and new possibilities because it uses all the power of your computer. Every battle is alive with

onto warships for attacks across oceans.

... great multi-player games, complete with treaties, trades, and treachery.

... playing challenging solo games against an intelligent computer opponent.

... a built-in game editor powerful enough to be called a "Strategy Game Construction Set."

music, color graphics, and strategic challenges impossible in a board game.

Imagine...

... having an infinite number of unique maps to choose from, so each game is different.

... marching your armies

Lords of Conquest. No more mucking around with cards and dice and little pieces of plastic that roll under the couch. Now you're free to concentrate on more important things. Like exterminating the opposition.

A Great Strategy Game

- Five kinds of forces to fight with — horses, weapons, boats, territory positions, and cities.
- Five kinds of wealth to fight for — gold, timber, iron, coal, and herds of horses.
- For 1-4 players. As fun for one as it is for four.

New Worlds to Conquer

- An infinite variety of game maps.
- Create your own, or play any of 20 built-in maps like *Ancient Rome*, *European Wars*, and *The World*.
- The computer can generate unlimited random maps.

Strategy Game Construction Set

- Variable game settings — you set the locations and abundance of resources, forces, and transport.
- You decide the luck factor.
- 4 levels of complexity.
- 9 levels of handicapping.

Available now for the Apple II,
Atari and Commodore-64.

its 6-megahertz speed, though three times faster than an XT, is not that of an AT (8 megahertz). The PC/XT 286 is positioned between the old XT and the AT, both in price and performance.

How to Use Batch Files. If you aren't familiar with batch files, you don't know what you're missing. They can automate an endless range of tasks. Basically, batch files are lists of commands that you would type one after another. Perhaps the best explanation of a batch file will come by example. Turn on your PC and let's try an easy one.

Create batch files using a word processor without any special formatting, and end each line by pressing ENTER. Name this file REMOVE.BAT (all batch file names must end with the .BAT extension).

Its purpose is to keep you from erasing files by accident with the DOS command ERASE. If you issue the command ERASE *.* , the computer will ask you if you want to erase all files from the disk. Sometimes you might give commands such as ERASE *.DOC to remove all documents from a disk, or ERASE *.BAK to remove all backup files. These commands are useful and very powerful, but unless you have previously asked for a directory, you will not be sure what will be erased. The file REMOVE.BAT changes that.

Use the REMOVE command instead of ERASE or DEL when you want to delete multiple files at once. It will list the files you specified for deletion before they are deleted.

```
ECHO OFF
CLS
ECHO You are removing these files:
DIR %1
ECHO Press CTRL-C if you want to
  abort this operation.
ECHO To remove %1.
PAUSE
ERASE %1
ECHO %1 files have been erased.
```

**"We shall create a computer
 that gives consumers
 Power Without the Price."** *John Trammell*

Our amazing 1040ST™ Computer is the world's first PC to cost less than \$1. per kilobyte.

How does that stack up against the competition? You'll pay over \$2. per kilobyte for the Macintosh™ Plus. More than \$7. per kilobyte for the Amiga™. And the PC AT™ kilobyte weighs in at a whopping \$18. That's why the 1040ST brings new meaning to the word "value."

For a revolutionary \$999., the ST™ Computer gives you a megabyte of memory. It's a complete package, with CPU, drive, monitor, and mouse. Its keyboard is packed with

function keys and a numeric keypad. Expandability is a built-in bonus. There are industry-standard ports for printers, modems, and many other peripherals.

The ATARI 1040ST is a megabyte of muscle. And it's at your nearby computer retailer today.

AMAZING

Ten Good Reasons to Buy an Amazing Things™ Model "A" Series™ Modem

1. Amazing Things Modems Provide Access to a Wealth of Information through Databases.

You can access over 2,500 informational databases with an Amazing Things Modem. Research topics from astrology to zoology, stock quotes, news, weather, sports, legal references, medical information and more.

2. Amazing Things Modems Network.

Connect your personal computer to any other personal computer in your office or in the world.

3. You can Telecommute with Amazing Things Modems.

Work at home and send your data to the office via telephone. Observers believe that 15-20 percent of the office work force will be telecommuting by 1990.

4. Amazing Things Modems are Direct Links to any Mainframe.

Access your company's mainframe from your office, from your home or on the road with an Amazing Things Modem.

5. Amazing Things Modems Overcome Incompatibility Problems.

Send documents from one personal computer to another, even if the systems are incompatible (i.e. Apple® to IBM®).

6. Amazing Things Modems Bring You Electronic Banking and Shopping.

Many banks now offer banking and investment services over the telephone. And you can shop for thousands of products — from cameras to clothing — with electronic catalogues.

7. You Can Send and Receive Electronic Mail with Amazing Things Modems.

Send letters and memos instantly. Mass mail them automatically, across the office or across the country.

8. Amazing Things Modems are Inexpensive Alternatives to the Telex.

Send and receive volumes of information overseas at a fraction of the cost of a Telex.

9. Amazing Things Modems are Fun.

Through various bulletin boards, you can join clubs, exchange software, advertise, meet people, find jobs and much more.

10. Amazing Things Modems are Inexpensive.

The Amazing Things Model "A" Series 1200B Modem is priced at **\$149.95** — about one third the price of an equivalent Hayes Modem. And the 2400B is priced at only **\$289**.

- 300-1200 Baud \$149.95

- 300-2400 Baud \$289.

- Half-Card

- Auto-Answer, Auto-Dial

- Hayes®-Compatible

- Full or Half-Duplex

- Two-Year Warranty

- For Leading Edge® Personal Computers, IBM and Compatibles

SPECIFICS**

The fourth line lists the files you specify for deletion. If you type REMOVE *.DOC, the list will contain only files with an extension of .DOC. If you type REMOVE *.* , all files on the disk will be listed. The next few lines instruct the user to press the CTRL-C key combination to abort the batch file or to press any key to continue. The next to last line in the file erases the specified files, and the last line reminds you which files were just removed. To use this batch file command, you will type REMOVE *.XXX, replacing the X's with the extension name of the files you want deleted, or REMOVE *.* to erase all files in the current directory.

PHIL WISWELL is a small-business consultant and computer journalist.

MS-DOS

BY STEVE MORGENSTERN

Some of the most exciting software releases for IBM PCs and compatibles in the past few years have been memory-resident programs. These useful tools include notepads, calculators, calendars, print utilities, and outline processors.

Unfortunately, users who try to keep several types of memory-resident software loaded at once often find that the programs don't get along well together; they can hang up the system in potentially ugly ways.

Fortunately, there's a new software category—memory-resident programs designed to manage other memory-resident programs.

PopDrop. (Infostructures Inc.; [602] 299-5962; \$19.95). One strategy is simply to erase one memory-resident program from RAM to make room for another. This is accomplished neatly by an inexpensive utility called *PopDrop*. You get an easy-to-use program that displays your memory usage on-screen and lets you conveniently remove programs in layers, much like taking cards off the top of a deck.

Referee. *Referee* (Persoft; [608] 273-6000; \$69.95) lets you remove memory-resident programs from memory. It also lets you selectively activate or deactivate individual

"We shall create a computer that's as powerful in the music studio as it is in the office." *Jack Tramiel*

Atari was among the first in the personal computer business to do something for music.

With a built-in Musical Instrument Digital Interface (MIDI), you can turn the 1040ST™ into a multitrack recording studio by connecting it directly to keyboards, drum machines, and synthesizers. No other PC has MIDI built in—not IBM®, not Amiga™, not Macintosh™.

The 16-bit ST™ also contains a sound chip with three programmable voices. One more reason why the ST Computer is at the top of the charts.

The ST is one of the finest

68000-based PC's you can own. It also features an array of expansion ports for your synthesizer, printer, and other important peripherals.

The 1040ST gives you all this for \$999—which we think will be music to your ears.

Available at fine computer and music dealers.

ATARI®

memory-resident programs (such as a thesaurus) without turning the computer off. You can even configure the system to automatically activate a specific group of memory-resident programs if the application program you are running allows this.

Playtime. (Electronic Arts; [415] 571-7171). Most of the notable new games for the MS-DOS world seem to fit the IBM corporate user image—lots of golf and business simulations. The manufacturer has provided two welcome alternatives to this grey-flannel world view.

Longtime Electronic Arts-watchers may well gasp in amazement at the news that *Starflight* has finally been released. This game was originally promised several years ago, and then mysteriously disappeared.

Starflight for IBM compatibles

Starflight (\$49.95) is a game of space exploration, and there's plenty to explore. The game galaxy includes 270 star systems, over 800 planets, and 1.5 billion locations in all (that's right, billion with a "b"). This is not a game you're going to conquer over the weekend.

I'm enjoying my *Starflight* explorations. However, I must admit that I've spent more time with a slightly less thought-intensive Electronic Arts release called *Super Boulder-Dash*. This arcade game, in the *Dig Dug/Lode Runner* tradition, has been a big hit on other computer systems. Hey, just because our computers can run Lotus' 1-2-3, does that mean we shouldn't have some fun, too?

Incidentally, the game plays well with either keyboard or joystick control, and the \$14.95 price makes it a bargain. Thanks, Electronic Arts!

MACHINE SPECIFICS

ORPHANS

BY PATRICK SPERA

Your kids are waiting for the newest cartoon heroes from Santa, and you picked up that item your spouse has been subtly hinting about. Even Rover has a package or two under the tree. But what about your computer? After doing all your dirty work for a year, doesn't it deserve a gift? Here are a few suggestions for those long-neglected "orphan" computers. (I've tried to include the postage in the listed prices.)

Gifts for the TS 1000/1500. Zebra Systems' ([718] 296-2385) selection includes Memotech 32K and 64K RAM packs for \$24.95 and \$49.95, respectively. RMG Enterprises ([503] 655-7484) will get you into telecommunications with the Byte-Back MD-2B modem for \$67 (supplies limited). Markel Enterprises ([718] 627-1293) carries a line of business software including *Invoice Control* and *Financial Record Keeper*. Curry Computer ([602] 978-2902) has Timex 2040 printer paper for \$6.95 (three rolls).

TI-99/4A Treasures. A must for your 99 is the Tenex Computer Express "The Everything Book" catalog. These people are not kidding! You can call (219) 259-7051 for more information. Bryght Data ([607] 272-4351) has the CorComp 32K add-on memory cartridge that plugs into the side of the computer. It has a feed-through to allow additional modules to be used. The cost is \$99.95. Disk Only Software ([301] 369-1339) markets a 128K RAM card for \$195. It can be expanded to 512K and includes a built-in RAM disk and printer spooler routines.

TS 2068 Presents. Knighted Computers ([315] 593-8219) has Spectrum programs that will run on a standard TS 2068. They cost between \$13.95-\$19.95. Sunset Electronics ([415] 665-8330) carries all the TS 2068 equipment. Call for availability. Zebra (see *TS 1000*) introduces *Sprites 2068*. This manual, which includes a cassette tape, will explain how to create sprite graphics. The cost is \$19.95. Russell Electronics ([814] 364-1325) has improved their ROMSWITCH. This device allows your TS 2068 to act like a Sinclair Spectrum and run virtually all Spectrum programs. You

will have to open the computer to install the card. It sells for \$39.95.

Adam Delights. NIAD Adam User Group ([312] 961-3529) sells the ADAMLink modem for communicating with other computers (\$69.95). NIAD also offers a complete line of software and supplies for the Adam. Astro International Inc. ([212] 889-1995) offers the Adam Extension Module #3, which converts ColecoVision into the Adam computer system for \$165. Ask for Udy when you call. Alpha-One LTD ([718] 336-7612) has 10 Data Pack tapes for \$29. M.W. Ruth Co. ([609] 667-2526) carries Digital Data Drives to fill that blank hole in your Adam. The price is \$29.95 (limited supply).

PATRICK SPERA can be reached on CompuServe (ID: 76703.4350).

TANDY

BY STEVE MILLER

Nothing pleases most of us like a sale, and Tandy, unlike most other computer companies, has them frequently. An especially good time for a sale is during the holiday season, so Tandy is in the midst of its annual Christmas Sale.

Prices Slashed! Topping the list of holiday goodies is a free CM-5 RGBI monitor (valued at \$299.95) with the purchase of either of the new Tandy 1000's, the EX, or the SX. The EX, which is geared for the home and educational markets, retails for \$799.

With the introduction of the new Color Computer 3, the CoCo 2's (64K model) price has been cut to \$99.95, down from an already reduced price of \$159.95. Before the introduction of the CoCo 3, it was \$199.95. The cost of a complete CoCo 2 system (minus a television or monitor) is reduced to \$499.95. The system includes a 64K Color Computer, disk drive, OS-9 Profile, DMP 105 printer, and cable. The regular price of the package is \$714.75.

The 128K CoCo 3 is also on sale. Until Christmas, it's going for \$199.95, down from its regular price of \$219.95. If you want to add a disk drive, the FD-501 Thinline has been reduced by \$100 to \$199.95. A similar \$100 savings can be had for the DMP 130 printer. It now sells for \$249.95.

CoCo Top 10. Sale or no sale, what's a CoCo (or any computer) without software? Since individual tastes and needs vary, it is difficult to make blanket recommendations about what package you might need. I thought, however, that it might be interesting and useful to know the best-selling Color Computer programs. The official Tandy top ten list is as follows: *DeskMate*, *Color SCRIPSIT*, *Personal Finance*, *Color Baseball*, *Dragonfire*, *Spectaculator*, *Flight Simulator I*, *Color Math*, *Pyramid*, *Downland*, *Dungeons of Daggorath*.

The sharp-eyed among you may have noticed that there are 11 items on the list. "I know that there are 11 programs on the list," chuckled a Tandy spokesperson, "but the last few are so close in sales that we decided to throw in an extra one."

There will be some new programs for the CoCo 3 available soon. *DeskMate 3*, *OS-9 Level II*, *Color SCRIPSIT II*, *Color File II* and *TSSpell* are definitely on the way. It's safe to assume that many of the current CoCo 2 packages (which will run on the CoCo 3 in the CoCo 2 mode) will be upgraded to take advantage of the CoCo 3's expanded capabilities.

Catalog Shopping. Before becoming interested in computers, I was not much for catalog shopping, but I now pore over them trying to decide which new gadget or program will make my computing life easier, more powerful, and more fun. Unfortunately, most computer catalogs are geared toward a narrow, technical audience. Few catalogs appeal to the whole family.

Tandy is one of the exceptions. In addition to the main catalog featuring all Tandy's computers and peripherals, two other catalogs list most of the software available through Tandy Computer Centers. All three publications—the *Tandy Computer Catalog*, the *Radio Shack Software Reference Guide*, and the *Radio Shack Educational Software Reference Guide*—are available free of charge through any Radio Shack Store or Computer Center. The only problem is that the catalogs have been out since late summer, and they rarely last long in the stores.

STEVE MILLER, former computer columnist for UPI, is a freelance writer and computer consultant.

F-15 STRIKE EAGLE

For Fighter Pilots—*Not* Sightseers

Enjoyed by
over **200,000**
satisfied computer
fighter pilots!

THE FIRST. THE BEST. THE **ONLY REAL** COMBAT FLIGHT SIMULATOR.

MAJOR BILL
OVER

ANNUAL BEST-EVER SHOPPING GUIDE

At least once this month, you're likely to step into a computer store in search of a gift for a fellow computer enthusiast—or for yourself. To help you make the best buying decisions, FAMILY COMPUTING has compiled the “3rd Annual Best-Ever Shopping Guide.”

Now a holiday tradition, our Shopping Guide is chock-full of gift ideas, hardware recommendations, and special bargains. Flip through “The Perfect Holiday Gift,” a medley of gift ideas, priced from a dollar to more than \$1,000. We've included the festive, the witty, the academic, the off-beat, the practical, and the extravagant. Also, check out “Best Hardware Picks of '86,” our editors' roundup of top-rated hardware and great deals. And don't miss “Seasonal Software Specials,” where we tell you about some great software deals we've found—such as manufacturer rebates and discounts.

In the following pages, there's something perfect for everyone—from the first-time user to the experienced programmer . . . just right for the executive or the student . . . suitable for all budgets. Happy Holidays!

THE PERFECT HOLIDAY GIFT - FROM \$1 TO \$1,000

ANNUAL BEST-EVER SHOPPING GUIDE FOR YOUR WHOLE FAMILY

Kaleidiskettes A bright assortment of disks to make organization a breeze. Try a different color for each family member (e.g., blue for Bob and red for Ronnie), subject, or computer. A 10-pack of single-sided diskettes costs \$15, while 10 double-sided diskettes cost \$17. From Allenbach Industries, Inc., 6350 Palomar Oaks Court, Suite A, Carlsbad,

CA 92008; (800) 468-2627; (800) 854-1515 in California.

Los Angeles On a Disk Add to your family's traveling know-how with a trek through Los Angeles to 300 authentic points of interest. To survive in this text/graphics adventure game, stop for food, entertainment, culture, sleep, and other needs. For 256K IBM PC AT and compatibles. \$40 plus \$2 for shipping and handling. From Klynas Engineering, P.O. Box 1666, Simi Valley, CA 93062; (805) 583-1029.

Certificate Maker Give family members the recognition they deserve with software that creates more than 200 pre-designed certificates. Citations range from "Outstanding in Your Field" to "Procrastinator's Award." \$50 (for Apple and C 64/128) or \$60 (for IBM). From Springboard Software, Inc., 7808 Creekridge Circle, Minneapolis, MN 55435; (612) 944-3915.

Micro Cookbook Busy cooks will savor this cooking treasure, a program filled with favorite recipes, cooking tips, and nutritional information. \$50. For the Apple II series and IBM and compatibles. From Pinpoint Publishing, P.O. Box 133233, Oakland, CA 94661; (415) 654-3050.

FlipTrack Computer Training Cassettes Computer neophytes and programming experts alike can boost their computing know-how with these cassettes. Pop 'em into a cassette player for up to 24 courses on specific computers, operating systems, and software. \$40-\$140. From FlipTrack Learning Systems, 999 Main St., Suite 200, Glen Ellyn, IL 60137; (800) 222-FLIP; (312) 790-1117 in Illinois.

Yamaha CX5M Music Computer Foot-tapping, instrument-playing, and music-loving families will sing for joy when they find the Yamaha computer under the Christmas tree. Creates same tones as some of the company's synthesizers. Compose, play, and learn about music. \$469. From Yamaha International Corporation, P.O. Box 6600, 6600 Orangethorpe Ave., Buena Park, CA 90620; (714) 522-9011.

Micropacer NL A perfect gift for the fitness-minded. These computerized running shoes calculate distance, time elapsed, average pace, and calories

burned. \$110 for nylon/leather sneakers or \$125 for all-leather. Adidas, 200 Sheffield St., Suite 300, Mountainside, NJ 07092; (201) 789-9292.

Blue Chip Personal Computer Looking for an inexpensive IBM PC XT clone? Need a business machine at home? This \$700 IBM-compatible comes with one disk drive, 256K of memory (expandable to 640K), serial and parallel ports, monochrome and RGB ports (but no monitor), and MS-DOS. From Blue Chip Electronics, Inc., 7305 West Boston Avenue, Chandler, AZ 85226; (602) 961-1485.

DeluxeVideo Create videos on your Amiga and then play them back. Here's a program that's guaranteed to turn the whole family into video fanatics. \$100. From Electronic Arts, 1820 Gateway Drive, San Mateo, CA 94404; (415) 571-7171.

The Computer Book Club Sign up the family to discover programs, projects, and other ways to use your computer. Select five books for only \$3 and get two free gifts. For more information, write: The Computer Book Club, P.O. Box 40, Blue Ridge Summit, PA 17214; (717) 794-2191.

Club Med Computer Workshops For some computing fun in the sun or the snow, treat the family to a Club Med vacation. There are 23 Club Med resorts with computer centers, eight in the Western Hemisphere. For prices and other information, contact: Club Med, 40 West 57 Street, New York, NY 10019; (800) CLUBMED.

1987 Computer-Term-A-Day Calendar Improve someone's computer literacy every day in 1987. New computer lingo is sure to impress business peers, friends, and other family members. \$8. From Antioch Publishing Company, 888 Dayton St., Yellow Springs, Ohio 45387; (800) 543-2397; (513) 767-7379 in Ohio.

Jingle Disk and Holiday PrinterPaper Your computer can double as an elf and help you prepare for the holiday festivities. *JingleDisk* is a holiday card maker and animated greeting disk, and *Holiday PrinterPaper* is a computer paper and sticker package. \$10 each. From Hi Tech Expressions, 2699 South Bayshore Drive, Suite 1000A, Coconut Grove, FL 33133; (800) 848-9273; (305) 854-2318 in Florida.

Elephant CRT Screen Cleaning Kit Keep the family computer looking and feeling good. This \$9 kit includes one spray pump bottle of CRT Terminal Cleaner and 50 lint-free clothes. From Dennison Manufacturing Company, Dennison Carter's Division, Framingham, MA 01701; (800) 343-8413; (617) 890-6350 in Massachusetts.

Ho! Ho! Ho! Five Family Christmas Games Romp through Christmas games with this spirited stocking stuffer. Corral Santa's reindeer, decorate cookies, kick around gift-wrapped presents, light the North Pole Christmas Tree, and get Santa on television. For Apple II Plus/IIe/IIc and Commodore 64/128. \$10. From Random House Electronic Publishing, 201 East 50th St., New York, NY 10022; (212) 751-2600.

Compu-IREX VDT Glasses

For a professional who spends his or her day staring at a computer terminal. These glasses, made of plastic, with lightweight lenses, promise to reduce eye strain and general visual fatigue. \$65. From Bollé America Inc., 3890 Elm Street, Denver, CO 80207; (800) 22-BOLLE; (303) 321-4300 in California.

RainbowPak Color computer paper will help an executive's communication stand out, both inside and outside of the office. Available in nine colors. Three hundred sheets in three different colors cost \$15. From Eastern Software Distributors, Inc. 3904 Hickory Ave., Baltimore, MD 21211; (800) 638-7563; (800) 492-2141 in Maryland.

Venture's Business Simulator Put an aspiring entrepreneur behind the President's desk of a start-up company and give him or her the chance to turn it into a multinational corporation. An executive-training program that helps develop business and management skills. Runs on 256K IBM PC/XT/AT and compatibles. \$100. From Electronic Arts, 1820 Gateway Drive, San Mateo, CA 94404; (415) 571-7171.

Sudden Knowledge Training Programs Seminars on disk—lessons in areas ranging from learning how to use your computer to learning Lotus' 1-2-3. \$50-\$200. CDEX-Intelligence Corporation, 1885 Lundy Avenue, San Jose, CA 95131; (800) 982-1213; (408) 263-0430 in California.

SmoothTalker Speech-synthesis software that gives the Macintosh a voice. Professionals can use to proofread letters, memos, and reports and verify data and numbers. \$100. From First Byte, Inc., 2845 Temple Ave., Long Beach, CA 90806; (213) 595-7006.

Business Card Holder Add hi-tech charm to the desk of an executive turned computer hobbyist. Made of leaded glass, this one-pound card holder costs \$29 plus \$2 for shipping and handling. Available from Sweet Gum, Inc., 15490 NW Seventh Avenue, Miami, FL 33169; (800) 237-9338; (305) 687-9338 in Florida.

Diconix 150 Printer For the traveling executive who works on the go. This four-pound, battery-powered printer can work on trains, planes, and buses, or travel between home and work. \$479. Diconix, A Kodak Company, 3100 Research Boulevard, Dayton, OH 45420; (513) 259-3100 or (800) DI-CONIX.

Data Hi-Liter Fluorescent may not be in for today's fashion-savvy, but computer-savvy students think day-glow Hi-liters are right on the mark. Students can study for

tests by highlighting computer printouts in yellow, green, blue, or pink. \$1. From Dennison Manufacturing Co., Dennison Carter's Division, 300 Howard Street, Framingham, MA 01701; (617) 879-0511.

3rd ANNUAL BEST-EVER SHOPPING GUIDE FOR STUDENTS

Homeworker Will help both the organized and disorganized start off the new year better prepared than in 1986. Includes a word processor, outliner, calen-

dar, calculator, flash-card maker, grade keeper, student-organizer notebook, and study-skills book. \$90. For Apple IIe/IIc. Davidson & Associates, Inc., 3135 Kashiwa Street, Torrance, CA 90505; (800) 556-6141 or (213) 534-4070.

Workcenter Series 710 This hickory-grain work center will eliminate computer clutter. Priced at \$544.75. Pieces also available separately. From O'Sullivan Industries, Inc., Nineteenth and Gulf Streets, Lamar, MO 64759; (417) 682-3322.

Spartan Upgrades a Commodore 64 to an Apple II Plus and provides students access to a wealth of educational software. This peripheral lets you use Apple II Plus peripherals and software, while retaining existing C 64 system. \$299. From Mimic Systems, 18027 Highway 99, Building A, Suite 1, Lynnwood, WA 98036; (800) 663-8527; (206) 775-4302 in Washington.

Ticket to Paris Your favorite French student can dazzle the whole class with the culture picked up from this program. Takes users on a simulated jaunt through Paris. For ages

14 and up. Available for 128K Apple IIe/IIc, C 64/128, and IBM PC/PCjr and compatibles. \$30-\$40. From Blue Lion Software, Box 650, Belmont, MA 02178; (617) 489-2477.

3rd ANNUAL BEST-EVER SHOPPING GUIDE FOR GAME LOVERS

ProGolf Golf lovers can play any time and any place with this computer-animated calculator-size 18-hole course. \$69. From The Sharper Image, 650 Davis Street, San Francisco, CA 94111; (800) 344-4444.

SciSys Turbo Chess Computer Promises to beat 92 percent of the world's chess players. A 16K computer with 17 levels of play—perfect for the avid chess player. \$159. From The Sharper Image, 650 Davis Street, San Francisco, CA 94111; (800) 344-4444.

Computer Backgammon Challenge a backgammon player to countless matches. Here's a 4K battery-operated backgammon-playing computer. \$69. From The Sharper Image, 650 Davis Street, San Francisco, CA 94111; (800) 344-4444.

Sega Master System Thrill a game player—and get back your computer—with a hardware and software video game ensemble. \$150. From Sega of America, Inc., 2149 Paragon Drive, San Jose, CA 95131; (408) 435-0201.

Epyx 500XJ The perfect present for the gamer in your life is a gift that promises precision. A joystick fits in the palm of the hand, and sensitive electronic microswitches let user hear as well as feel each move of the stick. Available for the Amiga, all Atari computers, C 64/128, and VIC-20. \$16-\$20. From Epyx, Inc., 600 Galveston Drive, Redwood City, CA 94063; (415) 366-0606.

3rd

ANNUAL BEST-EVER SHOPPING GUIDE FOR CHILDREN

Paper Models: The Christmas Kit Have the best-dressed Christmas tree in the neighborhood. Contains all the tools needed to create three-dimensional Christmas ornaments and decorations. For Apple II series, IBM PC/PCjr, Macintosh, Tandy 1000, and C 64/128. \$25-\$30. From Activision, Inc., 2350 Bayshore Parkway, Mountain View, CA 94043; (415) 940-6044.

P.C. Beast This "furi-pherical," whose ears and tail attach to any monitor with Velcro, livens up any computer workspace and helps children shake off a beastly image of computers. \$15. From Fundamental Design Group, 154 Magazine Street, Cambridge, MA 02139; (617) 354-5715.

My First Book About Computers, My First Book About BASIC, and My First Computer Dictionary Introduce children (ages 10-12) to the fascinating world of computers with these three 64-page books. \$10 each. From Microsoft Press, Box 97017, Redmond, Washington 98073; (800) 683-3030; in Maryland, call collect: (301) 824-7300.

Capsela 5000 Children 9 and up can create all kinds of fascinating motorized land and water toys with this remote-control, motorized construction system. Has 17 different functions, including beeping sounds, multi-colored lights, and a memory capacity of 94 commands. \$120. Play-Jour Inc., 200 Fifth Avenue, Suite 1024, New York, NY 10010; (212) 243-5200.

Mouse-House A cuddly creature for the perplexed youngster who doesn't see the resemblance between a computer mouse and the real thing. This mouse cover fits snugly over any mouse. \$8. From American Covers, Inc., 9192 South 300 West, Sandy, UT 84070; (800) 228-8987.

Walt Disney Comic Strip Maker Create comic strips using favorite Disney characters with inventive software. \$40 (Apple II series), \$30 (Commodore 64/128). From Bantam Electronic Publishing, 666 Fifth Avenue, New York, NY 10103; (800) 223-5870; (212) 765-6500 in New York.

PartyWare, CardWare, HeartWare, WareWithAll Four different products you're sure to love. *HeartWare* and *CardWare* are animated greeting disks that print; *PartyWare* is a card and party design kit and a data base; and *WareWithAll* is a paper supply kit. Priced between \$10 and \$15. From Hi Tech Expressions, Inc., 2699 South Bayshore Drive, Suite 1000A, Coconut Grove, FL 33133; (800) 848-9273; (305) 854-2318 in Florida.

Computer Camp Mix traditional summer fun with computer science at Marist College's Computer Camp. Offers two-week residential camps for ages 8-17 for \$950 (includes room and board, instruction, materials, computer and laboratory use, activities, and accident insurance). Contact: Director, Computer Camp, Marist College, Poughkeepsie, NY 12601; (914) 471-3240, extension 345.

GiganticGram Send special friends holiday greetings in a big way. Computer Greetings Corp. will create and mail whatever message you wish on 15-

foot banners. \$8 plus \$1 for shipping and handling. From Computer Greetings Corp., 22019 Vanowen Street, Suite K, Canoga Park, CA 91303; (800) 556-0670; (818) 716-0670 in California.

I Didn't Know You Could Do That With A Computer!

Know someone who doubts the usefulness of computers in the home? Treat that cynic to *I Didn't Know You Could Do That With A Computer!*, by Dan Gutman. An entertaining guide to more than 200 offbeat and unusual programs. \$15. From Compute! Books, P.O. Box 5038, FDR Station, New York, NY 10150; (800) 346-6767.

Family Computing magazine

You must have friends who *should* be subscribing. Holiday gift subscriptions are available for \$15.97 for the first one-year order and only \$9.97 for each additional gift. Plus, there's a free FAMILY COMPUTING tote bag for you with your paid order of two or more subscriptions. Use gift subscription order form in this magazine. FAMILY COMPUTING, Scholastic Inc., P.O. Box 2508, Boulder, CO 80321; (800) 525-0643.

3rd ANNUAL BEST-EVER SHOPPING GUIDE FOR FRIENDS

Print 'n Wear! Transfer Paper You can buy this iron-on transfer paper to make customized T-shirts, tote bags, aprons, and other gifts for your friends. To get started, all you need is a dot-matrix or thermal-ribbon printer and a graphics program or Kola Pad. A four-pack costs \$9 and a 10-pack costs \$20. Foto-Wear!, Inc., 62 Herbert Drive, East Brunswick, NJ 08816; (201) 257-6549.

PetSter Know someone who's allergic to animals, has a grumpy landlord, or is just too busy for pets? A robotic cat, which purrs and locates its master, substitutes for the real thing. \$40-\$100. From Axlon, Inc., 1287 Lawrence Station Road, Sunnysvale, CA 94089; (408) 747-1900.

X-10 Powerhouse System Bring futuristic friends into the age of the Jetsons with this home-control device. Used with a computer, it saves energy and keeps homes secure by controlling lights and appliances. \$70-\$80 (for controller, cable, and software). Available for the Apple IIe/IIc, Commodore 64/128, IBM PC and compatibles, and Macintosh. From X-10 (USA) Inc., 185A Lagrand Ave., Northvale, NJ 07647; (800) 526-0027; (201) 784-9700 in New Jersey.

Genie Families with modems can telecommunicate without breaking the bank. The hourly fee during non-prime time (6 p.m. to 8 a.m. weekdays; all times on weekends) is only \$5; prime-time costs soar to \$35. Sign someone up for just \$18. Call or write: General Electric Information Services Co., 401 N. Washington St., Rockville, MD 20850; (800) 638-9636.

CompuServe Information Service Any telecommunicator would be grateful for a gift membership to this popular on-line service. Sign-up fee is \$40. On-line costs run between \$6 and \$24.50 an hour. Contact: CompuServe, P.O. Box 20212, 5000 Arlington Center Blvd., Columbus, OH 43220; (800) 848-8199.

3rd ANNUAL BEST-EVER SHOPPING GUIDE FOR TELECOMMUNICATORS

PlayNET A Commodore 64 owner would flip over a gift membership to PlayNET communications network. Costs \$10 to join, \$12 monthly, plus \$2.75 an hour. Write or call: PlayNET Inc., 105 Jordan Road, Troy, NY 12180; (800) PLAYNET.

American Open University This electronic college, accessible by modem, offers individual classes for the non-matriculated, as well as three bachelor's degrees. Tuition is \$145 a credit for residents of Long Island and New York City and \$85 a credit for others, plus a \$25 communications fee per on-line course. Contact: New York Institute of Technology, Central Islip, NY 11722; (800) 222-6948 or (516) 348-3300.

The Computer Phone Book: Guide to Using Online Systems Will help inexperienced telecommunicators learn the ropes of on-line communications. Author Mike Cane offers a comprehensive step-by-step guide into the hows, whys, and wheres of telecommunications. \$15. New American Library, P.O. Box 999, Bergenfield, NJ 07621; (201) 387-0600.

Hallmark Color Mail Flamboyant characters on CompuServe would appreciate flashy holiday greetings. Send electronic messages to far-away friends, complete with graphics, sound, and music. \$30. For more information, type GO COLORMAIL or contact Hallmark Cards, Inc., Hallmark Color Mail, 2440 Pershing Road, Suite G-40, Kansas City, MO 64108; (816) 274-4416.

(For other gift ideas for telecommunicators, check out "1986 in Review" in this month's Telecomputing column.)

3rd ANNUAL BEST-EVER SHOPPING GUIDE

1 9 8 6
EDITORS' PICKS

Picking the best products of the year is like picking the best college football team of the year. Each pollster (whether a coach, fan, or sportswriter) has a bias; each compares apples and oranges, and the result displeases everyone except the winner.

But, what can be done? It's the nature of humankind (genus *Americanus*) to make lists, especially at this time of year. And so, like the pigskin pundits who proffer prognostications, we have made our computer picks, given them a strong defense, and we now await the pies that are winging toward our faces. (Double the whipped cream and flavor with cognac—please!)

BEST HARD- WARE

These products, all introduced in 1986, have already distinguished themselves in the marketplace—because of their price, quality, innovation, or usefulness.

**BEST OF 1986
COMPUTER**

Apple IIgs

Apple Computer, Inc.
\$999 (256K)

The new Apple IIgs reminds me of a talented young athlete whose amazing *potential* alone causes outstanding excitement. Apple has delivered a super high-res, 4,096-color graphics system, with built-in 15-voice sound capabilities, a Mac-like mouse interface, and room for megabytes of memory. All these factors promise delightful software to come. Although we have not seen any GS-specific software (only older products enhanced for

it, such as *AppleWorks 2.0* and an improved *Mouse-Write*), Apple Computer's strength almost assures wide support from publishers.

The Apple IIgs is the *child* of a great athlete, too, which makes it an immediate winner. The IIgs already runs almost all Apple II software—more than 90 percent, according to Del Yocam, chief operating officer of Apple. When you consider only more recent packages designed for the

current IIe and IIc machines, compatibility approaches 100 percent. And it runs the older software about three times faster! Hardware compatibility has also been maintained. You can continue to use your older parallel or serial cards, disk drives, composite color or monochrome monitor, joysticks, and so on.

The IIgs control panel, burned into the machine's ROM, indicates some of the sophisticated features we can

expect to see in forthcoming software. You make choices off a menu using the arrow keys, ESC, and RETURN, selecting separate elements such as text, background, and border colors from a palette of 15 hues. Internationalists can choose a screen display with special characters from eight different languages, such as French, Spanish, and German. Other control panel selections include a RAM disk, a built-in clock, and slide controls for the sound generator's volume and pitch.

The basic Apple IIgs sells for \$999; it includes the CPU, 256K RAM, a detached keyboard, and a mouse. The AppleColor RGB Monitor (almost a requisite for great graphics) goes for \$499. You can upgrade your older Apple IIe to the IIgs for \$499. While the price for a full system is steep, we expect it to decline over the coming year.

To offer such promising potential in graphics and sound, yet to maintain compatibility with the great array of Apple II products already out there, was a great feat that no other computer manufacturer has attempted with a first-generation (8-bit) machine.

—DAVID HALLERMAN

**BEST OF 1986
PORTABLE**

Toshiba 1100 Plus

**Toshiba America Inc.
\$1,999 (256K)**

Toshiba's new 1100 Plus combines the best elements of many other machines on the market. It's small (10 pounds), battery-operated, runs MS-DOS software, and has a clear screen display. And it's every bit as attractive and well made as Toshiba's well regarded printers and video equipment.

The 1100 Plus has an LCD screen that is quite readable and displays a full 80 x 25 screen. In the past, hard-to-read LCD screens have been the Achilles heel of many portables. The computer comes with 256K memory (or 640K), two 3.5-inch 720K floppy drives, a clock/calendar, serial (for a modem) and parallel

(for a printer) ports, and RGB and composite video outputs, so you can hook up regular-size monitors when not traveling. Or, you could use the Toshiba primarily as a

desktop computer and dismantle it for an occasional weekend trip. A carrying case is included.

The Toshiba will operate on its built-in rechargeable Ni-

Cad battery for up to eight hours, making it useful for working on the go, and it's small enough to integrate easily into the most cramped work spaces. The Toshiba comes with MS-DOS 2.11, manuals, a one-year warranty, and is backed by an Exceptional Care program that provides overnight replacement of a failed computer.

Assuming you want a portable IBM compatible, the main drawback to the Toshiba is the current difficulty of finding software in the 3.5-inch disk format. Many of the big business software titles are now being transferred, but educational or entertainment software probably won't be for some time. Toshiba offers a Floppy Link (\$199) option that permits disk copy and file transfer between the 1100 Plus and a 5.25-inch disk drive. While this disk format problem is a slight nuisance, it is the price you pay for being one step ahead of the crowd. —CHARLES H. GAJEWAY

**BEST OF 1986
PRINTER**

Toshiba P-321

**Toshiba America Inc.
\$699**

The Toshiba P-321 is a 24-pin dot-matrix printer that produces beautiful text. Like other 24-pin printers, the Toshiba can deliver letter-quality text in one pass of the printhead, unlike the double pass that older printers required for "correspondence" mode.

Three type fonts are built in, and others can be added with a cartridge (\$69) or by downloading them from a disk

(\$35-69). (To download fonts you need an additional board, \$89).

The Toshiba—which is

sturdy and attractive—prints at 180 characters per second (cps) in "high-speed" mode, and 80 cps in "high-quality"

mode. Only the most discerning eyes will be able to distinguish this from a letter-quality type. The high-quality mode is a bit noisy, but the results are worth it.

The optional tractor-feed mechanism (\$99) makes loading continuous-form paper easy. You can also print single sheets, using the friction feed mechanism. A cut-sheet feeder that continually feeds single sheets is available as an option (\$219). If your software doesn't have a Toshiba printer on its configuration menu, you can choose the Gume or Diablo configurations. The P-321 is available with a parallel or serial interface, or both. —NICK SULLIVAN

**BEST OF 1986
MONITOR**

NEC Multi-Sync Monitor

**NEC
\$899**

Up until now, switching from one computer to another, or upgrading your video interface, meant upgrading the monitor as well. Switching from a monochrome to a color monitor, or from a composite color to an RGB monitor, meant buying another monitor. With the new NEC Multi-Sync monitor, however, we at last have a high-quality RGB monitor that can be connected to the RGB connector on just about any computer, in-

cluding the Amiga and IBM's new Enhanced Graphics Adapter. In most cases, you can just connect the monitor to the video output of your system, and the internal in-

terface automatically adjusts to receive the computer's video output. The image from an RGB input is first-rate—sharp and steady.

You can even connect the

NEC to an IBM monochrome adapter, although it's not designed for that and the image may flicker slightly. Nonetheless, not having to buy separate monochrome and color monitors is obviously a great boon. Some computers and video interfaces may require a special cable (as is the case with all non-IBM compatible computers). Yet, this versatile display will work reliably with most popular systems, the standard AT&T 6300 video adapter excepted. At a frequently discounted price of \$700 (available by mail order for under \$600), the NEC is comparable in price to many high-resolution units but a better value because of its adaptability. —CHARLES H. GAJEWAY

BEST OF 1986 M O D E M

Leading Edge Model L

Leading Edge Products
\$149

The Leading Edge Model L modem doesn't do anything special. But it does add 1200-baud communications capability to your Leading Edge, Tandy 1000 and 1000 SX, IBM PC, and other IBM compatibles, at an unprecedented price. Leading Edge also sells a 2400-baud modem for \$289. Often the most obvious and simple ideas are the best.

The modem is on a short circuit card and will fit into both half- and full-size slots on IBM compatibles. You don't use the serial port or

have to add a serial card. The modem has two jacks—one for the outside telephone line and one for the telephone handset.

Software (*BitCom*) is included, so you can start making phone calls with your computer right away. *BitCom* supports the widely used Xmodem file-transfer method and allows you to reconfigure the modem's setting while on-line. Most communications software doesn't allow this.

You may also see this modem sold under the name Amazing Things (Model A), a company set up to market a variety of "amazing" electronics products. Amazing Things is a subsidiary of Leading Edge World Trade, which is an affiliate of Leading Edge Products.

—NICK SULLIVAN

BEST OF 1986 ACCESSORY

StyleWriter

Carolina Engineering Laboratories
\$198

The wild success of print-oriented software, such as *The Print Shop* and *The Newsroom* and the great interest in desktop publishing, indicates that getting a printer to perform tricks is one of the great delights of computing. With StyleWriter, a hardware unit that attaches between

your dot-matrix printer and computer, you can print letter-quality text in a variety of typefaces, even when using your regular word processor.

Each typeface comes on a ROM chip (\$13 each), and up to five chips can be installed in the Stylewriter box (three come with the main unit).

ROMs are available for Epson, Okidata, ImageWriter, and C. Itoh dot-matrix printers.

When you want to use your printer's regular capabilities, StyleWriter will pass the text or graphics through. But when you press a button to put this device in letter-quality mode, it uses your printer's graphics function to produce letter-quality text. Since it uses the graphics mode, StyleWriter prints somewhat slowly, but it does have an 8K buffer, so it can store about four pages while you work on something else.

—DAVID HALLERMAN

COME BACK OF THE YEAR

Macintosh

Apple Computer, Inc.
\$1699 (512K)

A year ago, the Macintosh was the totem of a company that had soared high and was falling low. The computer itself had offered such promise when it was first introduced, but it was castigated for being slow and cumbersome and lacking a *VisiCalc* or *Lotus' 1-2-3* software package to define it. What a difference a year makes!

With the new Macintosh Plus (\$2,199; one megabyte, an 800K internal disk drive, and a new operating system) and upgrades for older 128K and 512K Macs, the machine is finally realizing its potential. The SCSI port on the Mac Plus means you can connect a hard-disk drive without using the slower serial

port. And the surge in desktop publishing (programs like *PageMaker* and *Ready-Set-Go* have defined the Mac) is really propelling the Macintosh into corporate offices. Increased sales at the high end mean the price on the Macintosh 512K Enhanced (with 800K disk drive and improved operating system) has dropped into consumer range. It will continue to drop, especially if Apple introduces new enhancements for the Macintosh Plus next month, as expected.

Macintosh sales are surging, and the big software houses (Microsoft and Ashton-Tate among them) are developing new business programs. At the same time, software for virtually every other computer on the market is starting to look more and more like Macintosh software—with icons, windows, drop-down menus, and mouse control. The machine is on a roll that could not have been predicted last year.

—NICK SULLIVAN

BEST DEALS

These products are not necessarily new but have established themselves over the year as price-performance leaders.

ATARI 1040ST

Atari Corp.
\$999 (w/monochrome monitor)
 The Atari 1040ST is 1986's computer bargain of the year. The 1040ST was the first computer—and is still the only one—that sells for less than a dollar a kilobyte (K). It also includes a built-in disk drive that stores 720K, plus serial, parallel, hard-disk drive, and MIDI in and out ports. (The new Macintosh is the only other computer with a built-in hard-disk drive port.)

For \$999, you get the monochrome monitor system, which is quite sharp and a pleasure for business tasks. For \$1,199, you get the color monitor system, which displays the ST's eye-pleasing color graphics.

The mouse-controlled GEM operating system replaces cryptic commands with easy-to-use drop-down menus. All of this is driven by a Motorola 68000 processor with incredible speed.

A growing library of software takes advantage of the ST's features. Programs like *Microsoft Write* and *PaperClip Elite* make powerful word processing a reality. *D.E.G.A.S.* lets you create spectacular graphics in color or black and white. *Music Studio* can play music on the ST's three-voice sound (which plays out through the monitor's speaker) or with MIDI synthesizers. With its large selection of software, ease of use, sharp screen displays, and megabyte of memory, the 1040ST offers more capabilities at a lower price than any other computer.

—MATTHEW STERN

APPLE COLOR MONITOR II

Apple Computer, Inc.
\$379

I don't know how Apple did it. The Color Monitor II offers 80-column resolution and NTSC (regular color monitor) compatibility at half the price of many RGB units. Every test I've run on it shows that text and graphics im-

ages are just as bright and clear as all but the most expensive RGB units. And you don't need an RGB interface. Because it's a standard composite monitor, the Color Monitor II can be plugged into any NTSC-output computer, video game, or VCR to give a stunningly sharp and colorful image.

I prefer the IIc version for its sleek, high-tech styling, but the more traditional IIe model will match more components. If you want good color and 80-column text displays from one monitor and don't care to shell out for an RGB monitor, check out the Color Monitor II.

—CHARLES H. GAJEWAY

COMMODORE 1670 MODEM

Commodore Business Machines
\$200

Commodore has done more than any other computer manufacturer to make telecommunications affordable. The VICModem and then the 1660 were

low-priced 300-baud units that you could plug right into a VIC 20 or Commodore 64/128, without any cables. The same is true of the 1670—a 1200-baud unit that works with the VIC 20, 64, 64C, 128, and Plus/4. Current 64C buyers get sign-on software for *QuantumLink*, the Commodore-specific information service. And any-

one who owns *HomePak* owns *HomeTerm*, the wonderful communications program. These people have every incentive to buy a modem.

—NICK SULLIVAN

MacCHARLIE

Dayna Communications
\$795

MacCharlie is a device that connects to the side of a Macintosh and runs IBM software. It comes with one disk drive and 256K, or two disk drives and 640K (\$999). Thus, if you have a Macintosh, you can buy an IBM-compatible for \$999. Most people probably don't need such a luxury peripheral, but it would give those running home/small businesses a computer that could run all the world's top business software.

Besides running both IBM and Macintosh applications programs, MacCharlie allows you to move data between programs. You could, for instance, move a portion of an IBM spreadsheet into a Macintosh word-processing program or page-layout program. Using *Switcher*, which comes with MacCharlie, one click of the mouse will switch you from a Macintosh program to an IBM program.

When MacCharlie was first introduced, it cost nearly twice as much as now and was not nearly as attractive. But now that the cost has been slashed, MacCharlie is a tempting product for the right person.

—NICK SULLIVAN

SIDER HARD-DISK DRIVE

First Class Peripherals
\$695

Mail order is not new. And many companies that have made mail-order reputations are American institutions (e.g., L.L. Bean and Hamacher Schlemmer). But when First Class Peripherals began to advertise a 10-megabyte Apple II hard-disk drive for \$695 (with a 20MB unit at \$995), eyebrows were raised. (Through the end of 1986, you can buy a 10MB version for \$499 and a 20MB version for \$799, prepaid.)

Would people really buy something that expensive, complicated, and delicate through the mail, even with a 15-day money-back trial period and a one-year warranty? Yep. For two good reasons: The Sider drive works like water flowing downhill, and the company stands behind its product 110 percent.

No matter what operating system you throw at it—such as DOS 3.3, ProDOS, Pascal, and CP/M—the Sider can handle it. Copy-protected programs present a few problems, but that's true of nearly any computer with a hard disk. And you can back up your data to floppy disks, UniDisks, or tape.

Dealers don't carry the Sider because there's no profit for them. Competitors don't like it because they can't match the price through normal distribution channels. But for the user, the Sider is a no-lose product—a great performer at a stunning price. And once you've experienced the speed and convenience of a hard disk, you'll never want to go back to floppies.

—CHARLES H. GAJEWAY

TANDY MODEL 102

Tandy
\$499 (24K)

What can you say about a classic? Like an L.L. Bean duck boot or a 1955 Thunderbird, the Model 102 (a lighter, thinner version of the popular Model 100) is endlessly delightful and functional. It has a built-in modem and built-in word processing, communications, and filing software. When you turn it off, your data is stored. You don't need anything else to use it (though you can connect it to an external cassette, disk drive, or

monitor), and the three-pound computer will fit in your briefcase.

Best described as a model with a keyboard attached, the Model 102 is easy to learn, incredibly versatile, and rock-reliable. I've used my 100 to make mailing lists, take notes at seminars, write memos, reports and articles, download data while traveling, perform complex computations, and even play games. You can easily transfer data from the 102 to a desktop computer using a serial cable and communications software. The Model 102 is a worthwhile peripheral for any computer system.

—CHARLES H. GAJEWAY

PRINTER BARGAINS

Epson, Brother, Panasonic, Silver Reed
\$200 and up

With the rapid advances in printer technology in 1986, including the introduction of the 24-pin dot-matrix printers and laser printers, older printers have been relegated to sell-off sales. But they can print, and many computer and discount stores have them in stock.

The Fortis-DX 15 and Brother HR-15 (virtually the same model) and the

Silver-Reed EXP 400 are solid, letter-quality printers. They only print 12 or 13 cps, but to get anything significantly faster and better you're going to have to spend significantly more money. These printers are reliable and produce fine looking text. If you write business letters or want to throw a little spit and polish on your work, spit no further.

The Epson RX-80 series (100 cps), the Panasonic KX-P 1080 (100 cps) and KX-P 1091 (120 cps) are reliable dot-matrix printers, much faster than the letter quality, but with output not nearly so sharp and bold. And, they can print graphics. However, if you find a good deal on an Epson RX-80, make sure it has a tractor-feed mechanism. Not all do, and without one you'll have a hard time using continuous form paper. Any of these products would make excellent start-up printers or second printers in a two-computer household.

—NICK SULLIVAN

DISK-DRIVE DETECTIVES

MAKE
FICTION
COME
ALIVE
WITH
MYSTERY
GAMES:

BECOME
THE
SLEUTH
TRYING TO
CRACK
THE CASE

BY SHAY ADDAMS

Half the fun of reading a mystery novel is trying to figure out "whodunnit" before you finish the book. Disk-drive detective games are even more fun because they transport you *inside* the story to solve a crime. Instead of passively reading about how a detective shrewdly digs up evidence and solves the mystery,

SHAY ADDAMS wrote about "Board Games That Think" in the last issue of FAMILY COMPUTING.

you become the detective and actively participate in the drama. Cracking a case on your own—and you can't just flip to the last chapter to see who killed the butler—delivers a singular sense of accomplishment. Another important difference is that a novel's events always unfold in a fixed order set by the author. But many events in a detective game hinge on your decisions; arriving at the scene of the crime, you might choose to walk in

the front door or sneak around back to look for footprints. And though they differ in presentation, the plot twists in disk-drive detective stories are often as surprising as those in a tale by Dashiell Hammett or Raymond Chandler.

Most are adventure games in which you type actions such as "open desk" or "inspect gun for fingerprints" into the program's parser, which interprets your commands and displays

an all-text or illustrated response that varies with the program. A few detective games assume other forms that may appeal to the non-adventuring mystery fan. To get a range of gaming opinions, I asked some readers of *QuestBusters* (an adventure game newsletter I edit) and various inhabitants of CompuServe's Gaming Forum for comments on people's favorite mystery games. Their quotes follow throughout the article.

PUT ON YOUR FEDORA, AND GET TO WORK

Deadline, an all-text game from Infocom, elicited the biggest response. Patricia Fitzgibbons, who has played many mystery games, said, "I still have a soft spot for *Deadline*. I was amazed by the sophisticated prose and parser." One of the most difficult mysteries on disk, this story casts you as a police officer assigned to the murder of the wealthy Marshall Robner. In detective novels, *Deadline* would be called a "locked-room" mystery; the body is found in a study with a door that locks from the inside only. This means the first thing you must do is establish that the victim didn't commit suicide. The scene of the crime is a palatial, two-story Connecticut house, where you can grill the numerous suspects about each other as well as about any evidence you dig up. (As in most adventures, you'll have to draw a map of the game's many locations as you go along.) Your assistant, Duffy, will take items back to the station to have them analyzed for fingerprints, poison, or other clues.

Deadline's formula has been emulated often by subsequent games: After amassing enough evidence, you arrest one or more suspects, whose guilt or innocence is determined by a jury that reports its verdict months later. By talking to characters and discovering evidence, you must establish a motive, method, and opportunity in order to get a conviction. There are 24 alternative endings to *Deadline*, including one in which the grand jury dismisses the charges. (I was even arrested once and thrown off the police force!)

PRIVATE INVESTIGATORS SOLVE THE PUZZLES

A less common kind of mystery adventure has no provision for presenting evidence. It plays more like a typical adventure in which you solve a series of logical puzzles that lead to the final problem; that's when you

apprehend the outlaw. One such game is *Masquerade*. Illustrated with cartoon-like graphics, *Masquerade* sends you after a major criminal and is as deadly as *Deadline*. The puzzles are equally hard, but because you are concentrating on object-oriented puzzles, not people, the sense of participating in a novel-like mystery is somewhat diluted.

This is also true of *Mindshadow*, in which the mystery is your own name (remember Robert Ludlum's *The Bourne Identity*?). From the opening scene, which finds you stranded on a desert island, to the exciting climax when you confront a gunman in a Luxembourg hotel room, the game features colorful graphics and the most interesting story line in the series of Interplay adventures from Activision. But you won't really solve the crime by arresting anyone, only by unriddling puzzle after puzzle until you reach the conclusion. Lazy typists will appreciate the list of commonly used nouns and verbs that covers one-third of the screen; in many instances, you can issue commands by choosing words with the joystick or mouse instead of typing them in. Brightly colored graphics cover the other two-thirds of the screen.

The same user interface is employed in *Borrowed Time*, in which you play a hard-boiled private eye patterned after trenchcoat-wearing P.I.'s like Mike Hammer and Sam Spade. This caper kicks off in your office. You must study files on the suspects before setting out to rescue a kidnap victim, nab an arsonist, and apprehend the town's crime czar (by showing evidence to the police). The crime boss has put a pair of hit men on your trail, and the tense chase scenes that result often prove deadly. Graphics sparkle with spot animation that shows heads turning when you enter the bar, a phone jangling off the hook, and other diverting special effects. The only disappointment with *Borrowed Time* is the characters. They're stereotypes straight out of a pulp novel and lack the personalities of the inhabitants in other mysteries, especially the talkative souls in the Infocom games.

One of those games, *The Witness*, transports you to a ritzy southern California suburb in 1938, where the victim is gunned down before your (reading) eyes. Did Phong, the oriental butler, do it? Only by interrogating everyone and securing some incriminating evidence will you find

out. An all-text game, its best feature is the Chanderlesque prose style, and authentic lingo and settings from the thirties enrich the sense of intrigue. While *The Witness* has been criticized by advanced players who were able to race right through it, that same ease-of-play makes it a good introductory case for new cops on the beat.

Another period piece, *Déjà Vu*, is set in Chicago in the forties. As often happens to detectives in mystery novels, someone has "slipped you a mick" that wiped out your memory. You awake in Joe's Bar, where you struggle to solve a murder and kidnapping, as well as remember your name. Otherwise, you'll have to take the fall for the crime. The unique presentation uses icons and windows in addition to a type-in-the-words input. You can pick up objects by dragging an icon, shaped like a pistol or other item, into your inventory window; you examine things by "clicking" on them with the mouse.

If gangland Chicago is not your milieu, book a stateroom on a 19th-century paddle-wheel riverboat in *Murder on the Mississippi*. This animated tale lets you wear the gumshoes of Sir Charles Foxworth, a British sleuth vacationing on the Delta Princess, when he stumbles across a body. Instead of typing, you make your moves by choosing actions from a menu; you explore the staterooms by guiding Foxworth and his assistant, Regis Phelps, with a joystick. "It has good music and sound effects," said Susan Riley, an avid game player, "and I like using the menu for commands."

THE PRIVATE EYE AS AN AVERAGE GUY OR GAL

As mystery games proliferated, the "player as detective" perspective was joined by a fresh viewpoint in which you participate as an ordinary citizen who must solve the crime. In *Suspect*, a text-only adventure, you're a reporter attending a costume-party ball whose hostess is found strangled by a lasso that was part of your cowboy outfit. Unless you can lead the cops to the real killer, they'll arrest you. James Donnelly, a Gaming Forum habitue, called it his favorite mystery. "If you lose, you haven't just lost your job [in the game], but your life as well," he said.

It's off to the circus in *Ballyhoo*, where, as an innocent bystander, you have to rescue a kidnapped girl by participating in such big-top activi-

ties as walking a tightrope, visiting the fat lady, and taming a lion. And then you've got to save the girl from a runaway gorilla! Terry Clayton said, "I liked both *Deadline* and *Suspect*, but *Ballyhoo* is my favorite mystery because it requires a lot of puzzle-solving along with collecting evidence."

In *Earthly Delights*, you awake to find a burglar stealing a painting from your living room, and you must trail him to Paris to uncover an international gang of criminals with more than art theft on their minds. "It was like a real trip to Paris," recalled my son, Noel Moore. "I saw the Eiffel Tower, Napoleon's tomb, and the Can Can dancers. And there were no terrorists to worry about, either."

THE "REAL" DETECTIVES ENTER THE CASE

The latest trend is games based on the detectives that inspired the genre—games that let you assume the identity of your favorite crime solver. Sherlock Holmes, perhaps the most famous detective of all, is the subject of games from several companies (mainly because Holmes is in the public domain and the name doesn't have to be licensed). *Sherlock Holmes in Another Bow* is the title of a game that takes place on an ocean liner. It entails five related cases that must be unraveled before you polish off the main one. The cast includes historical characters such as Henry Ford and Gertrude Stein, and the graphics are well done. But it's not my idea of an adventure since it unfolds in a linear fashion, demanding that you be in the right place at the right time. I missed having the freedom to move about at will. And the parser, despite its 2,000-word vocabulary, makes communicating with the characters more frustrating than talking to a New York cabbie! However, Byron Byrd said, "I liked the graphics and writing style, and the plot was really good because the killer has you fooled all along."

I found *Baker Street Detective* more entertaining. It offers two murder cases to investigate: one victim is a bank president, the other a government witness in an extortion trial. As you cab back and forth across London (in 1893) to a variety of atmospheric locations, you'll notice that Holmes and Watson are portrayed more convincingly here than in *Another Bow*—even without graphics. This game employs a unique method for testing the results of your investi-

DS: Datasoft/IntelliCreations, (818) 886-5922.
IC: Infocom, (617) 492-6000.
MN: Mindscape, (312) 480-7667.
TS: Telarium/Spinnaker, (617) 494-1200.

Unless otherwise noted, minimum memory requirements are 48K for Apple II series, 48K for Atari 800/XL/XE series, 128K for IBM PC/PCjr or compatibles, and 128K for Macintosh. Titles listed for the IBM PC/PCjr will also run on many IBM PC compatibles; owing to the proliferation of compatibles, check with the program's publisher or your dealer for compatibility.

gation with an eight-question quiz that you can take up to three times during each time around. A third Holmes program, *221 B Baker Street*, includes 30 crimes to solve, and it blends animation with text. It can be played solo or with up to four people in competition.

Perry Mason, the creation of novelist Erle Stanley Gardner, always uncovers the killer by cleverly manipulating witnesses until they break down in court and confess. As Mason in *Perry Mason: The Case of the Mandarin Murder*, you must defend a woman charged with her husband's death. Paul Drake, Mason's ace detective, will race from the courtroom to sniff out evidence or pursue leads. Meanwhile, you devote your time to the duties of a lawyer: introducing evidence, objecting to the prosecutor's line of questioning, and even "whirling to face the jury" and other courtroom theatrics. *Mandarin Murder* exhibits an unusual graphics presentation. Instead of showing a full-screen picture with text below, it hangs a vertical illustration on one side and text on the other. You're offered several alternative endings, among them a hung jury. "Getting to make objections was my favorite part of the game," according to QuestBuster Ken Jameson. "The judge overrules me most of the time, but I still enjoy it."

If the idea of staying inside a courtroom throughout an entire game makes you claustrophobic, head for the racetrack in *High Stakes*. Adapted from a novel by former jockey Dick Francis, it puts you in the saddle as a wealthy British horse owner out to foil a sinister (what else!) plot to cheat you. Also set in England, Agatha Christie's *The Scoop* casts you as a newspaper reporter assigned to unravel the murder of a Mrs. Tracy. Was she knifed by the same person who killed the first reporter researching the story? As in most mystery games, you'll become just another crime statistic if you're not careful. It uses a menu filled with words you select via joystick and incorporates animation into the full-screen graphics.

What's the next trend for disk-drive detective games? Since mysteries based on detective novels have been so well received, don't be surprised if television-show detectives soon apply for work in the world of computer entertainment. I've got my fingers crossed for *64K Colombo* and *Murder, She Programmed*. ☐

BUYER'S GUIDE TO PORTABLE COMPUTERS

BY CHARLES GAJEWAY

THE PERFECT LINK BETWEEN HOME AND OFFICE, OFFICE AND HOTEL, HOTEL AND HOME

Ah, memories! The very first article that I wrote for FAMILY COMPUTING was entitled "Commuting with Computers" (October 1983), and it detailed some of the adventures I had lugging an Apple II from the office—home and back again—until I finally installed my first permanent home system and saved myself a lot of sweat and pain. Carrying disks was easier than carrying computers.

Since then, a lot of other people and I have found that carrying a small computer is a perfect compromise. You can make notes, write memos, and make calculations on trains and planes or in hotel rooms. Then, when you return to your home or office, you can transfer your data into your desktop. Or, if your portable has a built-in modem, as many do, you can send data via the phone lines back to home base.

"Portable" computers range from concrete blocks with handles to three-pound units that slip easily into a briefcase. There are four distinct classes of portable machines: notebooks, laptops, totables, and luggables. Each class has its own set of uses, advantages, and disadvantages, as well as outstanding performers.

NOTEBOOKS

Tandy Model 102

About the size of a three-subject notebook, notebook computers weigh from three to six pounds and will fit in most briefcases. They have a small LCD screen (8 or 16 lines by 40 characters), run on batteries, usually have built-in modems, and

always have software. A basic word processor, a communications program to make phone calls with the modem, and an address filer are standard.

Notebooks store data directly in RAM—even when the computer is turned off—although cassette recorders and disk drives can be connected. In short, notebooks are virtually complete systems, lacking only a printer. But they have both serial and parallel ports and work with a wide range of printers.

Notebooks are extremely useful for collecting small to moderate amounts of data that can later be uploaded into a larger PC or mainframe. Writers use notebooks to take notes and do rough drafts "on the spot." Businesspeople use them to store customer information and draft memos

and reports on the road. Students find them handy for taking notes in the library and even accessing electronic information services.

Tandy 102 and 200. The classic notebook machine is the Tandy Model 100. Especially with recent price reductions, it provides a lot of power per dollar. I have owned a 24K Model 100 for some time and find it an invaluable writing assistant, allowing me to write or take notes any time or any place there is enough light to see comfortably. (All Liquid Crystal Display screens need good light to be readable.) The newer Tandy 102 (now replacing the 100) is virtually the same computer, except it is smaller and lighter than the Tandy 100 (see chart).

The Tandy 200 is bigger and heavier than the 100 and has more software, including Microsoft's *Multiplan*, a spreadsheet. Its screen display is 16 lines by 40 characters, about the largest LCD display that is easily readable.

LAPTOPS

Toshiba
1100 Plus

Also referred to as "clamshell" computers because their LCD screens fold down over the keyboard, laptops generally include an internal disk drive so that large files don't hog RAM all the time. Thus, they don't have built-in software. You use commercial soft-

ware on a disk. With anywhere from 128K to 512K or more of RAM and generally battery-operated, laptops offer much of the functionality of a desktop PC to a mobile user.

However, you'd be hard pressed to fit them in a briefcase. Most are sold with their own shoulder-strap carrying bags. Also, the 80 column by 25 line LCD screens are dim and hard to read. "Is it turned on?" is a question that laptop users hear all the time, and, on occasion, ask themselves. Finally, battery life is generally limited due to the power drain of the disk drive motor.

IBM PC Convertible. Despite the hoopla and anticipation surrounding the IBM PC Convertible (see "Machine Specifics" in the November issue), it has been something of a disappointment. It offers little in the way of technological advancement and is difficult to configure. To connect a full-size monitor, the IBM LCD display must be disconnected. Moreover, you need a display adapter and a special monitor.

Two Toshibas. The new Toshiba 1100 Plus, however, is promising. It's lighter (nine pounds) and faster than the IBM PC Convertible and the screen is more readable. When you connect the 1100 Plus to a regular monitor,

Contributing editor CHARLES GAJEWAY owns a fleet of computers. Two of them—a Tandy Model 100 and a Compaq—are portable.

you merely fold the LCD screen flat. An internal 1200-baud modem is optional.

The Toshiba 3100 offers even more. Its gas-plasma screen display is extremely clear and readable in the dark. But the background and type are both in red and might take getting used to. The 3100 has a 3.5-inch disk drive, as well as a 10-megabyte hard-disk drive. The 3100 has more computing power per square inch than any other machine on the market. However, it does not run on batteries and there is no proof that portable hard-disk drives are reliable storage systems.

Zenith Z-181. Known mostly for its radios and televisions, Zenith is emerging as a major computer company, and its latest laptop can only propel them along. The Z-181 has arguably the clearest, brightest, and largest screen display of any computer in its class. It looks much like a regular CRT monitor, except that it has blue text and graphics against a white background. Zenith says it's working on an internal 2400-baud modem for this computer. If you've avoided portables because you find their screen displays unreadable, now's the time to take a second look.

TOTALS

Zenith Z-171

The newest class of portables is what I call the "totable," a machine the size of a portable stereo radio that weighs under 20 pounds. These systems offer backlit LCD screens, 5.25-inch disk drives, 512K or more of RAM, and standard serial and parallel interfaces. While they

don't generally run (or run long) on batteries, backlit screens are readable under most reasonable conditions, even with dim lighting. Thus, they are truly viable alternatives to desktop machines, even for full-time users. They would appeal to someone who has a cramped workspace at home.

Sharp PC 7000. I recently had the opportunity to try out Sharp's new IBM-compatible portable. I used it at home, carried it to the office, and ran all kinds of MS-DOS software on its twin 5.25-inch disk drives. The screen was very readable, even in a darkened living room, although its wide "aspect ratio" creates elongated graphic images, sometimes with humorous effect. This, of course, happens with many laptops and portables, since they translate screen displays designed for regular monitors to smaller screens with different proportions. Major software manufacturers (like Lotus and Ashton-Tate) are readying new versions of their software that are designed to compensate for the aspect ratios of some portables.

The screen is monochrome, naturally, but there's a built-in RGB interface for applications requiring color or accurate graphics. The full-sized keyboard (with numeric keypad) has a light, responsive touch, and clips neatly over the front of the screen for carrying and storage.

Quadram's Datavue. Very similar in concept to the Sharp PC-7000—though somewhat more expensive—the Datavue operates from a battery pack and is capable of holding more RAM (up to 1.3 megabytes). The keyboard has an infrared beam, so it can be used at a distance without a cord.

Zenith Z-171. The IRS recently bought \$28 million of these computers and Ford Motor Co. has ordered hun-

dreds for its executives, shining a spotlight on this capable little system. Like the Sharp, the IBM-compatible Zenith has a readable backlit screen, but its keyboard has no numeric keypad (maybe the IRS is getting lax!). This, of course, means that it's slightly smaller in size. The Zenith has two slim 5.25-inch disk drives. While this makes the computer somewhat larger than those with 3.5-inch drives, there's currently much more software available in the 5.25-inch format.

LUGGABLES

Compaq II

Welcome to bodybuilding for hackers! Stuffing a 9-inch CRT, at least two disk drives, expansion slots, and up to 640K of RAM into a case with a carrying handle gives you a 25 to 30 pound heavyweight performer. It can be moved and used anywhere

there's an electrical outlet and sufficient table space. Just eat your Wheaties and carry a spare can of spinach if you'll have to carry any more than a block or two.

Luggables primarily appeal to two types of people. First is the person who usually works in one spot but has a limited work area and/or occasionally needs to work elsewhere. This is my case, and I have been very happy with a Compaq Plus as my IBM-compatible machine (although I have been spotted drooling over the new Compaq II).

The other type of person is always on the go, but generally works from a car and rarely has to carry the machine very far—just out of the back seat into a building. CPAs,

BUYING TIPS

Disk Drives. If you want a briefcase-sized computer, you'll have to get one without disk drives. If you want a more powerful machine with disk drives, then you'll have to choose between 5.25-inch and 3.5-inch drives. The former run more software but take up more room; the latter store more data and allow for a smaller machine, but run less commercial software. To a certain extent, your decision depends on what kind of software library or other computers you already own.

Operating System. As in the "real" world of regular-sized computers, the portable-computer buyer must decide whether or not to go with an IBM compatible. The only reason to stray from the MS-DOS world would be to get the Tandy 100 or 200.

Screen Display. Most portables use Liquid Crystal Displays (LCDs), which react to video output more leisurely than regular CRT monitors. LCDs require good light to be readable, and some are unreadable under the best conditions. But only you can judge. Look hard before you buy.

The new totables have backlit LCD displays, so they provide their own light. These screens are much more readable, and they even work in semi-dark conditions.

Another factor to consider is the shape of the screen. Most portables have screens that are much wider than they are tall, whereas regular computer monitors are nearly square. Thus, graphics designed for the "square" screen sometimes become distorted on an oblong screen.

Portables with built-in interfaces for regular monitors are obviously preferable.

software developers, salespeople, engineers, and consultants all need the power of one of these systems, and they aren't bothered by their weight.

You still see a lot of luggables in airports, but I believe that most will be replaced by totables and the better laptops in the near future. It's nerve-wracking to wrestle a luggable into an overhead rack and frequently impossible.

Compaq II. The Compaq II and the Portable 286 offer the last word in speed, compatibility, and reliability in IBM-compatible luggables. Even mighty IBM, with the IBM Portable PC, couldn't shake Compaq's dominance in this market. Compaq's machines are a bit pricey, but quality materials and bullet-proof construction don't come cheap. You can buy the Compaq II with two 5.25 inch disk drives, or one floppy and a 10-megabyte hard-disk drive. You can run color graphics software on the green-screen monitor; on IBM PC and most compatibles you need a color monitor.

Macintosh. Don't forget the Macintosh! Slide a Mac with keyboard and mouse, an external drive, and a modem into one of Apple's carrying cases, and "voila"—you have a full-featured computer with a nine-inch CRT and two disk drives that weigh 25-30 pounds. Sounds like a luggable to me—and I've lugged one around enough to

know. If MS-DOS is not your cup of computer tea, a Macintosh may be just the flavor you've been looking for.

POOLSIDE PROSE

What kind of portable is for you? My rule of thumb is to pick the lightest machine that will do what you want without external add-ons. If you want to write a few pages of your novel by the pool or dash off a quick memo while riding to the airport in a taxi, you'd be happiest with a notebook unit. But if you need to revise your whole novel or do spreadsheet projections to accompany that memo, it's laptop time. On the other hand, if you need to dial up the Dow Jones News/Retrieval and do portfolio analysis wherever you go, you need a totable. If your eyesight mandates a larger, more readable screen, a luggable is in order.

Totables and luggables also make fine second machines for the growing number of two-computer households. They are compact, easily moved around the house, and generally less expensive than desktop machines of equivalent power. The professional user or advanced student can have dedicated power when and where it's needed without affecting the rest of the family's computer enjoyment.

It's safe to say that computers to go are here to stay! ☐

Family Crisis

BY SUE EDISON-SWIFT

Author Sue, her husband, Paul, and Annie

HOW ONE FAMILY BUILT A SUPPORT SYSTEM OF FRIENDS AND RELATIVES WITH ITS COMPUTER AND THE U.S. POSTAL SERVICE

Our family computer has helped us manage the budget and the checkbook, but I'm most grateful for the role our computer played in helping us manage a crisis.

This story began last fall when our pediatrician found a lump in our daughter's abdomen. Four days and many tests later, we were given a diagnosis: Annie had neuroblastoma, a huge, inoperable, malignant mass.

Many people had the right to know this news. How do you tell family and friends that beautiful, 4½-year-old Annie would probably not live to see her sixth birthday? Repeating this news over and over on the telephone was not possible, and to ask someone else to make these calls was not fair. Since we have a computer system, we had another option. We chose to write a letter:

September 28, 1985

There is no way to say this easily. Annie has neuroblastoma, a large cancerous mass in the abdomen that has spread to bone marrow. Neuroblastoma is considered a terminal illness, treated but not cured with chemotherapy. Statistically, children with this kind of cancer are likely to survive less than two years.

We know you are devastated. We know that you care. For awhile though, please don't call us. We are hanging on by threads and would find phone calls draining, not supporting. We are good at delegating, and believe us when we say we'll contact you "if there is anything you can do." In the meantime, two kind neighbors have been elected to take calls. They have the latest information, and you should feel free to call them.

SUE EDISON-SWIFT is a technical writer, who lives in Middleton, Wisconsin.

My husband, Paul, the computer enthusiast of the family, keeps an electronic address book using a data-base manager. Because this list is current, it was an easy task to select the people to receive the letter and print out address labels. In two hours, we had written, photocopied, stuffed, stamped, and applied labels to about 100 letters.

People complain about computer letters, but our family and friends were unanimously grateful to receive the news quickly—first hand from us. The one hundred letters generated an active support group of more than 1,000 people. Family, friends, and friends of friends sent cards and letters, mailed treasures to Annie, prayed for all of us, and did countless good works and kind deeds.

Happily, we had reason to mail a second letter seven days after the first. Annie's diagnosis had been made on the basis of several tests; the most important one was a bone-marrow biopsy. A hospital pathologist reviewed the biopsy slides and caught a slight inconsistency. As a result, an abdominal biopsy was ordered. Miraculously, the abdominal biopsy showed benign cells instead of neuroblastoma. It was unlikely, but suddenly there was a chance that Annie's tumor was not cancerous.

October 4, 1985

If the last letter we mailed you could have been entitled "despair," this letter can be called "hope." It seems there is a CHANCE that Annie has ganglioneuroma--the benign--not cancerous--mature form of neuroblastoma.

Surgery is scheduled for Wednesday morning, and the surgeon will try to remove as much of the massive tumor as he can. If the entire tumor is ganglioneuroma, Annie is CURED, and I can go back to worrying about the things most mothers worry about. If underneath this benign form of the tumor there is still neuroblastoma, then the prognosis is still bleak.

We are OK, in need of sleep, in need of more good news. Annie is a gift from God and is caring for us all. In the hospital playroom, she gives out her stickers to cheer up the other kids. "Don't worry," she told my friend Sibba. "I'll be all right." She gets scared and she cries, but she holds still and does what needs to be done.

The next time I write, I hope it can be titled "JOY."

Everyone on our mailing list liked the third letter best. Annie's football-size tumor was successfully removed and it was benign! It had been tricky, delicate surgery. It was a medical miracle. Our Annie was going to heal, and she was going to be all better.

October 14, 1985

JOY!

We have a miracle to report. On Wednesday, October 9, Annie's surgeon removed a football-size tumor from Annie's abdomen. He was able to remove 95 percent of the tumor which wound around, but did not invade, every

artery and organ in her abdomen (except the intestines). On Friday, the lab study proved that the entire tumor consisted of ganglioneuroma cells--the benign--not cancerous--form of neuroblastoma. This means Annie will be fine; she is CURED. No further treatment is needed.

The next letter mailed was a combination progress report, thank-you note, and holiday greeting. A letter timed for Thanksgiving seemed appropriate, for if any family had reason to be thankful, it was ours. Annie had healed quickly.

There were still worries. Annie's blood pressure had been elevated since her surgery, and her left kidney wasn't functioning at full capacity. We hoped both problems would resolve themselves with time.

Soon after Thanksgiving, it was clear that time was not helping. Annie would need a nephrectomy—her left kidney would have to be removed.

This time the surgery would be simpler and the prognosis clearer. Annie could easily manage with one kidney. We knew what to expect from surgery, and it wasn't anything fun. Annie returned to the hospital, and I returned to the computer, activating our support group once again.

December 5, 1985

Dear friends, once again we are asking for your help. Please pray that we be given the strength and courage to get through this. Please write us. Letters are concrete evidence of your concern, and they mean so much. Sending Annie "a little something" is always appreciated. Last time, the treasures she received did so much to lift her spirits and keep her occupied.

On December 19, we mailed our final letter. Annie's surgery went well, her blood pressure was normal, and she was recovering on schedule. *Have a merry, little Christmas*, I closed, *which is just what we intend to do.*

This story ended last year on Christmas Day, when we participated in a time-honored holiday tradition—traveling to Grandma's and Grandpa's house. My little girl had spent weeks in the hospital and had two major operations in two months. She was fine, and we were fine. It was a merry, little Christmas.

You see how our computer helped us deliver very personal messages. Paul's data base of addresses was used to help choose the families that would receive the letters, generate mailing labels, create a list of phone numbers to take to the hospital, and even keep track of gifts and kindnesses. Our word processor, spell checker, and grammar checker helped get the letters out. All of these things could have been done without our computer, but with it, the task was easier and faster. When managing a crisis, minimal stress and maximum speed are important.

Using the computer to write about Annie's progress had another, less obvious, benefit. Because we were essentially writing form letters, we could contact more people. Think of the important people in your life that you see or write to only occasionally. These were the

CREATE AN ELECTRONIC ADDRESS BOOK

Keeping an electronic address book is a nice way to integrate your computer into your life. Medical emergencies aside, you can use a single data base to: 1) make current address lists for invitations, announcements, and vacation postcards; 2) generate mailing labels; and 3) print out Rolodex cards for a computer-generated address book.

We keep our address book in *dBASE II* (Ashton-Tate). Each address is entered using this format.

LAST NAME (25 CHARACTERS) *This is used for alphabetizing.*
FULL NAME (34) *Entered as you want it to appear on a mailing label.*

ADDRESS LINE 1 (34) *We limit the address fields to 34 characters so it will fit on a mailing label.*

ADDRESS LINE 2 (34)
CITY, STATE, ZIP (34)
PHONE 1 (25)
PHONE 2 (25)
PHONE 3 (25)
CODES (10)

We use codes to help select subsets from the data base. For example, C=Christmas card list, B=Business, F=receives all family mailings. A temporary code here will let you print out just the new entries.

Using *dBASE II* and *WordStar* (MicroPro), you can print out Rolodex cards for each entry. Making multiple copies gives you access to current addresses and phone numbers everywhere you need them . . . by each phone, on the desk, or at the office. When crazy Aunt Sophie moves for the 20th time, you just enter in the new address, print out four new Rolodex cards, and everything remains neat and current (2¼" x 4" Rolodex cards are available at a stationery store as a continuous form for your printer for about \$17 per 1,000 cards).

people especially touched when we included them. In fact, some of the most comforting letters and greatest help came from people on the periphery of our lives. We wouldn't have had the time or strength to contact so many people any other way. A mass mailing allowed more people to be involved, to help, and to show they cared.

One year later, Annie's only apparent scar is the one spanning her tummy. Annie is a bright, happy, funny kindergartner who wants to be a singing-mommy-doctor when she grows up. The close of last year's Thanksgiving letter still rings true:

We are fine, the three of us. We learn from Annie how to put some of this experience behind us and some of it ahead of us. Instead of counting blessings we will try to use them. And we will always remember how the love of God, our love for each other, and the love from all of you, saved us. Our best wishes for happy holidays and a new year filled with joy.

It's time for me to power up the computer and write my 1986 holiday greeting. It will probably be dull when compared to last year's letter. I don't think anyone will mind. ☐

A MASS MAILING ALLOWED MORE PEOPLE TO BE INVOLVED, TO HELP, AND TO SHOW THEY CARED.

Writing Shortcuts

SAVE TIME, INCREASE ACCURACY,
AND END DRUDGERY WITH
WORD-PROCESSING MACROS

BY DAVID HALLERMAN

As a teenager back in 1964-65, I regularly went to the New York World's Fair in my home borough of Queens. What fascinated me most were the colorful exhibits that portrayed a future of increasing automation, based on the up-and-coming "thinking" machine, the computer.

Now, more than 20 years later, computers have automated a multitude of tasks. Writing with a word processor is one of these. Yet our expectations from computers have become so high, we question the efficiency of automation when it can take seven keystrokes to check what files are on a data disk. And if it's necessary to write the same sentences over and over again in business letters, or repeat a long title

in a school report, then the advantages of automation are not so apparent.

MACROS: THE ESSENCE OF PERSONAL IN COMPUTING

With a word-processing function called a *macro*, however, you can automate more of your writing. A macro is a collection of keystrokes for doing a particular task that has been converted into only one or two keystrokes. (*While not our focus here, other applications, such as spreadsheets and telecommunications, also benefit from macros.*)

One type of macro lets you insert text throughout your documents, anything from an abbreviation to a good-size paragraph. For

DAVID HALLERMAN is reviews editor for FAMILY COMPUTING.

example, you can create a text macro that—after you simultaneously press the ALT and the N key (N for name)—places your name and address in correspondence. Another example: I remember when I helped my non-word-processing wife put together her final paper for cooking school, a restaurant proposal for Marco Polo, an imaginary Italian-Chinese restaurant in Nyack, New York. Just as with a proposal for a real restaurant, a hefty (75-page) section was filled with recipes. I could only type “2 oz.” or “1 tbl.” or “tomatoes” so many times before going bananas, but macros kept me sane, with one for each measurement and ingredient. When you need to write the same words repeatedly, text macros reduce tiresome typing and make work flow smoothly.

The other type of macro can help you speed up the word-processor's functions, such as loading files or search and replace. Here's one instance. I often move from paragraph to paragraph by searching for the return character found at the end of a paragraph, but even that automation takes six keystrokes with my word processor, *AppleWriter* (Apple Computer). By using a macro to link those six keystrokes, however, I just tap the OPEN APPLE and the PERIOD keys simultaneously, and my cursor jumps from one paragraph to another.

I enjoy making macros. They let you customize a word processor with commands of your choice, according to your work patterns, not some inflexible structure. I'm fond of saying that macros put the “personal” in personal computers. In some cases, you can even enhance a program by adding new commands to your program that the publisher has not included. For example, with *AppleWriter*, you can normally delete a word only when the cursor is at the end of it. However, I wrote a macro that lets the cursor sit anywhere on a word, and I just press the OPEN APPLE and the D keys together to delete it.

If the sequence of commands represented by the macro is a complicated one, then you need to get it right only once, which eliminates errors and needless memorization. One helpful macro I use daily organizes the beginning of a letter for me by setting the correct tab stops and margins, embedding the needed printer codes to give me elite type, and then moving my cursor to the right side, where I can key in the date.

Unfortunately, not all word processors offer a macro function, although they're seen in a few family-level packages and are common in professional-level programs. (See *Part 1 of “The Guide to Writing with Computers” series in the August 1986 issue to find some programs that allow macros.*) If your writing software doesn't allow macros, but you have an IBM or compatible or a Macintosh, you can usually add a separate keyboard macro program (see box, “*Macros For All Reasons*”).

HOW TO MAKE A MACRO AND MAKE IT WORK

Before you register a sequence of keystrokes into a macro, you must assign those keystrokes to a single key, sometimes known as the “call key.” Depending on your word processor, call keys can be numbers, letters, punctuation marks, symbols, and even control characters. When you want to replay any particular sequence, you press the call key you've chosen along with your program's particular key for invoking macros (some function key, such as ESC, ALT, OPEN APPLE, or F3). That's why you want to choose call keys that are easy to remember. For example, you might press a two-keystroke set such as ALT-C to cut a block of text or ESC-M to set up special margins.

Again depending on your word processor, there are two ways to make a macro: Record it or write it.

Recording a macro is akin to recording music with a tape recorder. Instead of musical notes, though, it's keystrokes in a particular order that are captured. And rather than being saved on a cassette, a macro is recorded in memory, and then saved to disk. When you replay the macro, it rapidly retypes your original keystrokes automatically, while your hands stay off the keyboard.

With slight variations from program to program, here's how you record a macro:

1. Turn on the macro function's record mode.
2. Go through precisely the same steps you need to perform the task without the macro.
3. Turn off the record mode.

That's it. For example, to make a macro with *Mindscape/Scarborough's MasterType's*

**FOR
ELIMINATING
DULL WORK,
TEXT MACROS
ARE
NONPAREIL.**

MACROS FOR ALL REASONS

If your word processor doesn't deliver a macro function, yet you're working with an IBM PC or compatible or a Macintosh, macro help is available as separate, stand-alone software. These packages give you macros not just for your word processor, but for any program that uses the keyboard, such as a data base or a spreadsheet. While minor variations are found among macro generators, they all do pretty much the same thing. As a convenience feature, a macro program records a series of keystrokes, letting you play them back at the touch of one or two keys.

Macros are good for holding text, but they're even more impressive when it comes to automating tricky word-processing commands.

As an editor for Henson Associates, the producers of the Muppets, Louise Gikow writes scripts on her computer. She writes with *WordStar* (MicroPro International), a word processor known for its complex, multiple-keystroke editing and formatting commands.

Gikow's scripts require extensive centering, boldfacing, underlining, and indenting. “When I looked at the list of *WordStar* commands,” she recalled, “I thought it would take me more time to make a script look right than to write the script itself.”

A macro generator became the solution to her dilemma; her choice was the highly regarded *ProKey* (Rosesoft). (Two more macro programs are *SuperKey* from Borland for the IBM PC or compatibles and *Tempo* from Affinity Microsystems for the Macintosh.) New character names, type style, and placement on the page can be assigned to simple key combinations. Every time Gikow holds down the ALT key while pressing the letter K, Kermit's name appears, properly centered and boldfaced, and the word processor returns to non-centered, normal type mode for writing the lines he speaks. When it's Miss Piggy's turn, ALT-P performs the same function, and so on, through all of Muppetdom. Magnifique!

—STEVE MORGENSTERN

**BUILD UP FILES
OF STANDARD
MACROS FOR
YOUR EVERYDAY
WORK AND
CREATE CUSTOM
MACROS FOR
EACH PROJECT.**

Writer (the C 64 or Apple II versions), you press CTRL-T to turn on record. Then type in your text or use the ESC, cursor, and RETURN keys to choose commands from the various menus. When done, press CTRL-T again to stop recording. The program automatically assigns each macro a number from 1 to 20. When you want to make one work, press ESC together with the corresponding number.

With word processors that make you write macros, however, the process is not as automatic. You commonly write a macro in a separate document used solely for macros. Instead of writing in full sentences, though, you string together keywords or special characters, such as <ESC> as a stand-in for the ESCAPE key or a] (right bracket) for the RETURN key. You need to be exact in writing macros; each character or keyword has a specific meaning and must be placed in a definite order. If you keep a scratch pad beside you, and note in order all the keystrokes and menu choices needed to do a particular task, writing a macro becomes relatively simple.

As an example, let's look at *AutoWorks* (The Software Touch), an add-on program that gives *AppleWorks* (Apple Computer), a macro function, among other new features. *AutoWorks* lets you either record macros and save them into a word-processing file or write them directly using the *AppleWorks* word processor. Here's how a macro written to catalog a data disk would look:

```
C: <MAIN> 5 <RETURN> 2 <RETURN>
```

You invoke this macro by pressing SOLID APPLE and C (the call key) together, which represent these five keystrokes: <MAIN> takes you to the main menu, and 5 highlights selection number five, "Other Activities." The first <RETURN> moves you to the next menu, and 2 highlights the choice, "List all files on the current disk drive." The final <RETURN> catalogs that disk.

**THESE ARE A FEW OF
MY FAVORITE MACROS**

Since macros are used to combine common word-processing functions, the idea behind many macros is the same from program to program, even if the execution varies. You'll have to figure out the details yourself for the following macro suggestions, but that's part of the fun.

Text macros. The actual words you put into a macro are, of course, up to you. But for eliminating dull work, text macros are nonpareil. For example, you could create a set of macros with the call keys A, B, and C to insert three different opening paragraphs in a business letter. You would invoke macro A when writing to current customers, macro B for letters to old customers, and macro C for potential buyers. Or, if writing fiction, you might make up macros for your characters' names.

Search and replace. The search-and-replace commands combine well with macros. If you saw Part 3 of this series in the October issue, you'll remember some tips for using those functions. So, for instance, when I search for a place marker in my text, I insert the same character consistently as a marker, and automate the search for it with a single macro whose call key is that character.

Transpose two words. This macro one-step transposes two words. Before you call the macro, put the cursor on the word you wish to move.

1. Mark or highlight the word with your word processor's cut-and-paste function.
2. Cut the word, temporarily removing it from your document. At this point, your cursor should be sitting on the space where the word once was.
3. If you want to transpose the word to the right, continue the macro with a search for the next space to the right. If you want to transpose the word to the left, search for the next space to the left.
4. Paste back the word.

Would you like to make paragraphs trade places, too? Automate the same basic steps: cut, search, and paste.

Save and load documents. While the mechanics of this next school of macros will vary with the program, the schemes are the same. Saving and loading documents are the basics of file handling. Although you manipulate files every time you write, calling them up and storing them consumes anywhere from three keystrokes and up, more often up—perfect jobs for macros. I suggest setting up a macro to load each file you're working on regularly—bypassing menus and extra keystrokes. And if your word processor demands more than a couple of keystrokes to save your current document, make a macro.

Change margins. When you reformat most word-processed documents by changing margins or setting up new headers or footers, you use several keystrokes without macros. Since I use the same six different margin settings all the time, each is assigned its own macro. Other print parameters, such as pica or elite type and single- or double-spaced lines, can be set with the same macro, or I use separate ones for finer tuning.

Remember, almost any word-processing task can be accomplished with a macro. Once you get used to making macros for your word processing, you'll not only build up files of standard macros for your everyday work, you'll probably learn to create custom macros for each project. When it comes to writing shortcuts, there's nothing like a macro. ☐

NOTE: Next month, we'll continue our word-processing series by showing you how to control your printouts.

enter the world of Middle Earth

HEREIN LIES THE KEY TO MAGICAL SOFTWARE ADVENTURE

Cross the bridge on Old South Road... bear right at the fork... take a left at East Road, past Weather-top Mountain... then... enter the world of J.R.R. Tolkien's classic fantasy novels. Roam about in this captivating, imaginary world, filled with creatures and situations beyond your wildest dreams. Become Bilbo Baggins!

This season, Addison-Wesley and Melbourne House Software take a step beyond THE HOBBIT to bring you Tolkien's THE FELLOWSHIP OF THE RING. In addition to the features and exceptional graphics that made THE HOBBIT a software

bestseller, THE FELLOWSHIP OF THE RING contains two complete, consecutive adventures. This program has over 100 graphic locations, which allow you to see Middle-earth through the eyes of Frodo, Sam, Merry, and Pippin.

You can assume the role of any one of these characters—or play with up to 3 friends, each of whom can become a different Hobbit.

THE FELLOWSHIP OF THE RING and THE HOBBIT are available now at your local computer store, bookstore, or wherever software is sold. Your opportunity to live a few hours of your life as a Hobbit is here!

THE FELLOWSHIP OF THE RING and THE HOBBIT are available for the Apple IIe/IIc, the Commodore 64/128, and the IBM PC/PC jr.

EVERY BUSINESS NEEDS AN IBM-PC WHO WANTS TO PAY IBM PRICES? WE HAVE A SOLUTION!!!

FACTORY
DIRECT
\$799.
STANDARD
MODEL

100% Compatible PC-XT
BASE PRICE \$950.00 LEASE \$39/MO
With 20 MEG Hard Disk \$1399.00 LEASE \$56/MO

Upon Approved Credit

Our **PC-XT SUPER TURBO COMPUTER** runs all the popular Business Programs, like Lotus 1, 2, 3, Word Perfect, Wordstar, dBase III, Homebase, Sidekick, and Flight Simulator. In addition to running the programs at the standard IBM clock speed of 4.77 Mhz, it also runs at 8 Mhz — **almost twice as fast as IBM.**

ACS has developed the fastest, most powerful XT and AT computers available today. We have also researched the numerous software programs available to automate your office. If you are considering buying a computer, call ACS. We can recommend the software and hardware system that will best solve your business needs.

HERE'S WHAT YOU GET

- ACS-Turbo Mother Board 4.77/8.0 Mhz
- 640K of RAM
- Two 360K Floppy Drives
- Heavy Duty 135 Watt Power Supply
- Keyboard New "AT" Type with Large Enter Key
- Parallel Printer Port
- Monochrome Graphics Display Card
- High Resolution Mono Monitor
with Swivel Base and Anti-Glare Screen

OPTIONS

- | | |
|------------------------------|----------|
| 20 MEG Hard Disk | \$449.00 |
| 20 MEG Tape Back-Up | \$595.00 |
| Clock/Calendar | \$ 59.00 |
| Internal Modem 300/1200 BAUD | \$199.00 |
| Okidata 192 Printer | \$399.00 |

PROGRAMS INCLUDED

Included in the purchase price is MS-DOS, the standard IBM operating system. With our Hard Disk Computer, you also get HOMEBASE, a general purpose multi-function program to perform word processing, electronic filing, and data base management. HOMEBASE has a built-in calendar, with monthly, weekly, and daily scheduling. The Homebase Calculator lets you perform calculations on the monitor and the ability to print a paper tape if desired. HOMEBASE also includes a communication program with autodialer for communication with other computers (requires a modem).

5 YEAR WARRANTY AVAILABLE

GUARANTEE & WARRANTY

We guarantee you will be delighted with our ACS-Turbo Computer or return it within 30 days for a refund (less shipping charges). We warranty our Turbo Computer 100% Parts & Labor for 1 year. We believe our computer is even more reliable than IBM — that's why we're offering a five-year extended warranty for only \$30.00 a year. Order early for the holidays — delivery may take over 30 days.

HOW TO ORDER

Call us at (818) 889-1092. We have experienced salespeople to advise you with your computer requirements. Ask for our experts — ask for Department FD.

You can charge our ACS-Turbo Computer with a VISA or MasterCard. We also have a lease plan available for qualified businesses, with payments from 36 months to 60 months.

*IBM is a registered trademark of International Business Machines.

BACK TO BASIC

OUR NEW NUMBER GAME MAKES IT EASY TO START LEARNING BASIC

BY PASQUALE M. CIRULLO

Is there a new computer in the house this holiday season? Or do you finally have a little time to take the first step toward learning BASIC? Here's a good way to start programming. This month's *Back to Basic* features a short program that's both fun and easy to understand. We'll take you through each word in the BASIC language that the program uses and show you how the words work together. Along the way, we'll lead you on some simple explorations that will quickly have you "talking" to your computer—and your computer will understand and obey your commands. At the end, we'll suggest a few ways you can experiment with our program and actually create your own versions.

Of course, if you want, you can just type in and enjoy the program. But be brave! Read further, and you'll discover how easy it is to make sense of BASIC.

A JUMBLE OF NUMBERS

Numble is an entertaining, fast-moving and new cross-number game that tests your knowledge of the arithmetic tables and your ability to use numbers creatively. You can play on your own or compete against others.

When you type RUN, the screen clears and you see something like this:

```
TARGET NUMBER: 5
4 9 1 0
4 5 1 5
6 3 4 9
1 8 8 0
```

Your goal is to find as many different combinations of adjacent numbers as possible that can be strung together,

with +, -, ×, and ÷ signs and parentheses inserted between them (e.g., $(5 \times 4) / (7 - 3)$) to give the "target number" as a result. But you have to hurry; you only have a few seconds until the computer declares that you must "STOP!!"

In the grid above, you could choose the last 5 in the second row and the 0 at the end of the first row, inserting a minus sign to get $5 - 0$; the 1 in the second row could be multiplied by the 5 on either side, or added to the 4 below, to get 5×1 , 1×5 , or $1 + 4$; any of these results could be multiplied by the 1 in the first row to get $(5 - 0) \times 1$, $1 \times 1 \times 5$, or $1 \times (1 + 4)$. These are just a few possibilities. But you can only move from one number to the number directly above, below, to the side, or diagonally connected to it, in order. Thus, you couldn't claim $4 + 1$ by adding either 4 in the first two rows to either 1 in the same two rows, because they're not adjacent.

With a little practice, you'll find yourself uncovering more and more combinations that equal the target number. Your score is the number of different combinations you find before the computer calls STOP!!

To play against others, take turns typing RUN, and keep track of your cumulative scores; and of course you can play in teams, too.

TYPING IN YOUR FIRST PROGRAM

If this sounds like fun, but you've never typed a program into your computer before, never fear! It's really quite easy.

Gather together your computer's manuals and a disk or cassette (if you want to save your program to use again later). Check your disk-drive manual to find out how to

BEGINNER PROGRAM

format or initialize your disk; that prepares it to receive programs and data. Then check the program heads to determine which version will work on your computer. (The program for the Apple II series appears in "The Anatomy of a Program" on page 84.)

Next, check your manuals to find out how to get into BASIC. On some computers, this is as simple as turning the computer on; on others, you must load BASIC the same way you'd load a game or word-processing program.

Then check "Tips to the Typist" on page 106 for help with typing in the program. When you've typed in every line, LISTED the program (displayed all the lines in order) on the screen or printer, and checked every line for accuracy, SAVE it on your disk or cassette. (Again, check your system's manuals, or consult "How to Type in Programs" in the September 1984 issue of FAMILY COMPUTING for help with LISTING and SAVEING.)

When you're done, type RUN and press the RETURN or ENTER key . . . and start finding those number combinations! And if the program doesn't work, LIST it again and double-check each line against the magazine.

You got the program to work? Congratulations! Read on to find out how easy it is to understand what the program is doing. For best results, have a seat in front of your computer, and try typing in—and experimenting with—each short example as you come to it.

LINE NUMBERS

In most versions of BASIC, every line of a program must begin with a number. These line numbers tell the computer the order in which to execute the lines. For the line numbers, you may use any positive whole numbers you wish, usually with an upper limit of about 65000. These line numbers are OK:

100
1
0
65432

These are illegal:

-5 (must be positive)
2½ (must be a whole number)
98.6 (must be a whole number)
70000 (too large, on most systems)

What's important is that the line numbers increase from the beginning of the program to the end. You can type the lines in any order, but the computer will automatically arrange them in order from the smallest line number to the largest.

Often, programmers use line numbers that increase by 10 (500, 510, 520, etc.) so that more lines can easily be added later in case a line was forgotten or the program is expanded. If you number your program lines 10, 20, and 30 and then need to insert a line after line 10, you can call it line 15. But if you number your lines 10, 11, and 12 instead, you can't add a line after line 10 without first changing the numbers of lines 11 and 12. So it pays to be safe and leave space between your line numbers.

CLEARING THE SCREEN

You can't expect the computer to understand English, but BASIC does have a small vocabulary of English or English-like words to which it assigns special meaning. *Numble* uses eight of these: HOME (or the equivalent word in other dialects of BASIC), PRINT, FOR/NEXT, INT, RND (some also use RANDOMIZE, discussed below), TAB, and END.

The first command, HOME, is line 100—the first line of most versions. This command clears the computer's screen. It also moves the cursor (the block or underline,

POWERFUL ENOUGH TO COMPUTE OUR NATIONAL DEBT. YET IT COSTS SO MUCH LESS.

Allow us to introduce the most powerful electronic spreadsheet in the Commodore world.

Multiplan®

This is the same intensely simple, staggeringly brilliant program over a million Apple and IBM owners count on.

And now it will count for you, on any 64 or 128.

Ironically, however, though we recently lowered the price of Multiplan, we actually increased its capabilities.

The enhanced version not only takes full advantage of the 128's expanded memory and 80 column screen.

Not only includes a *Quickstart* instruction manual.

And not only comes with 10 ready-to-go templates.

But it is the fastest loading spreadsheet

Multiplan works beautifully on a budget.

you can buy. Which means in mere seconds you can check your checkbook. Take stock of your stocks. Or calculate your risks.

You can plan, budget, analyze, question, ponder, revise, estimate and forecast.

Just by doing little more than pressing a few keys.

In fact, there really isn't any kind of hardcore number crunching you can't do faster and easier with Multiplan at your control.

Whether you're managing a family of 4. A business of 50. Or a nation of 250 million.

Multiplan and Microsoft are registered trademarks of Microsoft Corp.

EPYX

usually blinking, that moves as you type to indicate your position on the screen) to the upper left-hand corner of the screen.

The command varies from one machine to another: on the Apple it's HOME; on the Atari, PRINT CHR\$(125); on the Commodore, PRINT CHR\$(147); and on the IBM PC, Macintosh, and Tandy computers, it's CLS. Though these commands look very different, they all accomplish the same thing.

To see this command in action, type HOME or the appropriate command for your computer, and press the RETURN key. (Some computers have an ENTER key instead of a RETURN key; it performs the same function.) Now type a few lines of anything just to fill up the screen and repeat the exercise. You should notice that the screen is erased. Though this command clears everything off the screen, it has no effect on the computer's memory.

You've just used what's called "immediate mode." When you type in a line that starts with a number, BASIC assumes that it's just one line of a longer program and stores it away, waiting for you to enter more lines or type RUN or LIST. When you type in a line that doesn't start with a number, BASIC assumes you want it to execute the command *immediately*, and does so if it can. That's why HOME clears the screen, but 100 HOME adds a line to the program in memory.

WRITING ON THE SCREEN

The PRINT command, found in lines 110, 120, 140, 170, 190, 230, and 240, is perhaps the most necessary command in BASIC because without it, you will not get answers or other information from the computer.

PRINT is BASIC's way of saying "display on the screen." The word PRINT (and not DISPLAY) is used in most versions

of BASIC because the first users of BASIC weren't lucky enough to have monitors or any other kind of display screen; they communicated with their computers through teletypewriters, punched cards, and line printers (huge machines that print a line at a time). To get information out of the computer, they would give the command to PRINT on the teletypewriter, card punch, or line printer. When BASIC was moved over to microcomputers, the commands stayed the same while the equipment changed. That's why we PRINT to the screen, while some versions of BASIC use LPRINT to send output to a printer.

The PRINT command is very versatile, but it's also easy to write incorrectly. (If you do make a mistake, BASIC will complain that you've made a SYNTAX ERROR or words to that effect, and let you try again . . . and again, and again.) You can use PRINT to put words on the screen, to tell you the value of a function or formula, to display the result of a calculation, or to print a blank line to make your screen easier to read.

The simplest form of the PRINT command prints a blank line. You might use this to double-space your screen display or to print some things at the top of the screen and others at the bottom, leaving the middle blank.

To print a blank line, we just use the word PRINT with nothing else on that line. For example, when the computer encounters lines 120, 190, and 230 of the program, it will move down to the next line.

To have the computer print the value of a function or formula, just insert the function or formula after the word PRINT (see line 110 of *Numble*). To see how this works, type the following line:

```
PRINT 10*5-3
```

and press RETURN. The computer should respond with the answer 47, which is $10 \times 5 - 3$. (BASIC uses the

If you feel like a lost soul when it comes to music software, get the bible.

Almost every bit of music software you could possibly want or need can now be found in a unique single source: Coda, the bible of music software.

Detailing over 500 items which range from software to accessories to books, Coda is a remarkably user-friendly catalog that takes the confusion out of searching for the right music software. It's the computer-using musician's best

resource today. In fact, if you can't find what you need in Coda, chances are it doesn't exist.

Order Coda today for only \$4.00, by simply calling the number below. Or write to: Wenger Corp., 555 Park Drive, Dept. F2, Owatonna, MN 55060. It's not only inspirational, it's divine guidance.

Coda. 1-800-843-1337.
All major credit cards accepted.
Or call collect 1-507-451-1951.

CIRCLE READER SERVICE 88

asterisk to mean multiplication.) You can PRINT just about any formula you like; BASIC will let you use your computer as a big (and expensive!) desktop calculator.

Here's an example of how to use this kind of PRINT statement in a program:

```
10 A = 10
20 B = 7
30 PRINT A*B
RUN
```

A and B are *variables*. A variable is a number that the computer has stored in its memory. Line 10 gives the variable A the value 10, and line 20 makes the variable B equal to 7. If A equals 10 and B equals 7, $A \times B$ equals 70; and that's the value this program prints.

You can use the PRINT command to print the value of a variable by just putting the name of the variable you want printed after the word PRINT. Try this program to see:

```
10 X = 10
20 Y = 7
30 Z = X*Y
40 PRINT Z
RUN
```

You will notice that the computer gave the same answer as in the previous example. The two methods of doing a calculation are somewhat interchangeable. The second method is usually used when the calculations are complex, to give a little more clarity to a program, or when you want to use the result for further calculations.

The last way to use a PRINT statement is to have the computer print a phrase on the screen. You print it by enclosing it in quotes and putting it after the word PRINT, as on line 240 of the program. When the computer reaches line 240, it will print exactly what is between the quotes. (It doesn't print the quotes themselves, though.) See if you can make the computer print your name.

Sometimes you want to print more than one thing on a line. Any combination of items can be used in the same print statement as long as they are separated by a semicolon (;). (Some versions of BASIC let you use a space to separate items, with no semicolon, but a semicolon will always work.) Here's an example of printing two messages and the result of a calculation, all on the same line:

```
PRINT "HELLO. "; 10*7; " HOW ARE YOU?"
```

A semicolon is a signal that there's more to come on the same line. When a semicolon is placed at the end of a print statement, the computer will print the contents of the next PRINT statement on the same line. So the following program prints the same thing as the statement above:

```
10 PRINT "HELLO. ";
20 PRINT 10*7;
30 PRINT " HOW ARE YOU?"
RUN
```

FOR/NEXT: TRAVELING IN CIRCLES

The third command, FOR/NEXT, is actually a combination of two commands that must always be used together. If you use one without the other, the computer will tell you that you have an error.

FOR and NEXT are used to mark the start and end of what is called a loop. A loop is used when you want the computer to execute a series of lines more than once or when you want the computer to count. *Numble* contains examples of both uses.

When the computer sees a FOR statement, it knows that you want it to start counting. You must give the computer a variable to store the count (called a counter or index), tell it what number to start counting from, and tell it

when to stop counting (the upper limit). The NEXT command is used to tell the computer to go back to the FOR command and increase the index by one. All the commands that are between the FOR command and the NEXT command will be repeated until the computer reaches the upper limit. Try the following program:

```
10 FOR X = 1 TO 100
20 PRINT X
30 NEXT X
RUN
```

In this program, we are telling the computer to print all the numbers between 1 and 100. Line 10 tells the computer to use X as the index (or counter), start by setting X equal to 1, and stop when X is greater than 100. Line 20 tells it to print the value of X. Line 30 tells the computer to go back to the matching FOR statement (in line 10), increase X by one (the computer always counts by 1's unless you tell it otherwise), and continue—unless X is now greater than the upper limit (100 in this example). If it is, the computer goes on with the next statement after the NEXT command.

Numble uses nested loops. Two FOR/NEXT loops are called "nested" if one is inside the other. We used nested loops because we need to print four lines with four numbers on each line. To see how a computer counts with nested loops, try the following short program:

```
10 FOR X = 1 TO 5
20 FOR Y = 1 TO 5
30 PRINT X, Y
40 NEXT Y
50 NEXT X
RUN
```

Note the comma used in line 30. When you separate items to be printed with a comma instead of a semicolon, the computer acts as if you've pressed the tab key on a typewriter: it moves over to its next preset tab location before printing the next item.

A FOR/NEXT loop can also be used if you want the computer to wait for a set amount of time, "not doing anything." This is called a delay loop. Take a look at lines 210 and 220 of *Numble*. In these lines, we ask the computer to stop and count from 1 to 3000 before continuing with the program.

YOUR FIRST FUNCTIONS

Most of the other words from BASIC's vocabulary used in *Numble* are functions. A function is a special command in BASIC that performs a specific operation, usually on a number.

For example, the INT function is used in lines 110 and 160 (except in the CoCo and Models III/4 versions, where it's not needed; we'll see why soon). INT stands for integer. This function tells the computer to convert the number in parentheses into an integer (a whole number). The computer does this by dropping all the digits after the decimal point. So INT always rounds to a lower number, never larger.

To better understand this command, type the following four examples. Don't forget to press RETURN after each line.

```
PRINT INT(7894)
PRINT INT(3.2)
PRINT INT(-576.563)
PRINT INT(999.9999)
```

If you typed the lines correctly, the computer should have answered with 7894, 3, -576, and 999, respectively. You can try your own examples by just substituting your own numbers within the parentheses. →

can even earn your Associate in Applied Science Degree in Electronics Engineering Technology. Of course, you set your own pace, and, if you ever have questions or problems, our instructors are only a toll-free phone call away.

The first step is yours.

To find out more, mail in the coupon below. Or, if you prefer, call toll-free 1-800-321-2155 (in Ohio, 1-800-523-9109). We'll send you a copy of CIE's school catalog and a complete package of enrollment information. For your convenience, we'll try to have a representative contact you to answer your questions.

CIE MAKES THE WORLD OF ELECTRONICS YOURS.

Today's world is the world of electronics. But to be a part of it, you need the right kind of training, the kind you get from CIE, the kind that can take you to a fast growing career in business, medicine, science, government, aerospace, communications, and more.

Specialized training.

You learn best from a specialist, and that's CIE. We're the leader in teaching electronics through independent study, we teach only electronics and we've been doing it for over 50 years. You can put that experience to work for you just like more than 25,000 CIE students are currently doing all around the world.

Practical training.

You learn best with practical training, so CIE's Auto-Programmed® lessons are designed to take you step-by-step, principle-by-principle. You also get valuable hands-on experience at every stage with sophisticated electronics tools CIE-designed for teaching. Our

4K RAM Microprocessor Training Laboratory, for example, trains you to work with a broad range of computers in a way that working with a single, stock computer simply can't.

Personalized training.

You learn best with flexible training, so we let you choose from a broad range of courses. You start with what you know, a little or a lot, and you go wherever you want, as far as you want. With CIE, you

BEGINNER PROGRAM

This function comes in handy whenever you have to deal with integers instead of fractions. For example, in a game program, you may have to compute how many steps the purple monster should take. It can only take full steps, not part of a step.

PICK A NUMBER, ANY NUMBER

The RND function, also used in lines 110 and 160, is the computer's random-number generator. This function tells the computer to pick a (rational) number between 0 and 1, such as 0.00432564 or 0.9876543.

This function differs slightly from one computer to another. On the IBM PC and compatibles and Macintosh, each time you use RND in a BASIC line, it will be replaced by a different random number. On the Apple, Atari, Commodore 64, and Tandy Color Computer and Models III/4, you have to put a number (in parentheses) after RND; RND(1) will give you a number between 0 and 1.

Note that owners of IBM PC and compatible computers and Macintoshes need a companion command, RANDOMIZE, to give the computer's "bowl" of random numbers a good stir before picking out the first number. This command prevents the computer from picking the same series of numbers each time a program is run. It manages this by asking you to choose a number, called the "seed," used by the random-number generator to determine how much to "stir" the bowl of random numbers before starting to pick numbers out. When the computer encounters the RANDOMIZE command, it displays the following message on the screen:

```
RANDOM NUMBER SEED (-32768 TO 32767)?
```

Type in a whole number in that range and press RETURN. The number you type in won't be one of the random numbers produced thereafter by the RND function, but if you enter the same number every time you run the program, you'll get the same sequence of random numbers every time.

The Macintosh and many versions of BASIC for the IBM PC and compatibles have a way around this problem: the command RANDOMIZE TIMER. This instructs the computer to take its "seed" from the computer's internal clock rather than asking you to type in the seed. Since the computer keeps track of time by the microsecond, it's unlikely you'll get the same "seed" and the same sequence of random numbers twice.

To see the RND function in action, try the following program:

```
20 FOR X=1 TO 5
30 PRINT RND(1)
40 NEXT X
```

```
RUN
```

```
RUN
```

RUN (every time you type RUN, the program runs again from the start).

If you are using an IBM PC or compatible or Macintosh, use this version:

```
10 RANDOMIZE
20 FOR X=1 TO 5
30 PRINT RND
40 NEXT X
```

```
RUN
```

```
RUN
```

```
RUN
```

IBM and Mac owners may wonder what happens when line 10 is removed (by typing 10 alone on a line and pressing RETURN). Try it and see! You can also experiment with changing line 10 to read

```
10 RANDOMIZE TIMER
```

(Remember: some versions of BASIC for the IBM PC don't accept the word TIMER in this statement.)

So RND (or RND(1), depending on your computer) provides a number between 0 and 1, not including 0 and 1 (*exclusive*). But often we don't need a fraction, but rather a whole number in a certain range. For example, all the numbers printed on the *Numble* playing screen need to be between 0 and 9, including 0 and 9 (*inclusive*).

This problem is easy to handle. On the Tandy Color Computer and Models III/4, we just replace the 1 in parentheses with our upper limit. For example, RND(86) will give us a random whole number between 1 and 86, inclusive; RND(5) will give us 1, 2, 3, 4, or 5. Since RND(9) gives us a random number between 1 and 9, and we want one between 0 and 9, the CoCo and Model III/4 versions use RND(10) to get a number between 1 and 10, then subtract 1 from that result to get a number between 0 and 9.

On other computers, we can multiply the RND function by our upper limit, and apply the INT function to the result if we want whole numbers only. For example, here's how to print a number between 0 and 49:

```
Apple, Atari, Commodore 64: PRINT INT(RND(1)*50)
```

```
IBM PC & compatibles, Macintosh: PRINT INT(RND*50)
```

```
Tandy Color Computer and Model III: PRINT RND(50) - 1
```

Remember, RND and RND(1) produce a number between 0 and 1, *exclusive*. So RND*50 (or RND(1)*50) gives you a number between 0.0000001 (or thereabouts, depending on the accuracy of your computer) and 49.99999; and taking the integer part of these numbers produces a value between 0 and 49, *inclusive*.

PRETTYING UP THE SCREEN

The last function used in *Numble* is the TAB function, found in lines 110, 140, and 240. (Ataris don't have the TAB function, so the Atari version of *Numble* prints everything at the left margin. Atari owners can use the POSITION command, explained in the Atari BASIC manual, to place words in specific positions on the screen.)

Notice that the TAB function only appears in PRINT statements. TAB (short for "tabulate") tells the computer how far over on the line to go before PRINTING the next item. Depending on the computer, the number inside the parentheses after the word TAB represents either how many spaces to skip before printing the next item or the number of the column in which the next item should be printed. For example, TAB(20) either indicates a prompt to skip 20 spaces or to print the next item in column number 20. (This column will appear near the center of a 40-column screen, depending on whether your computer numbers its columns 0 - 39 or 1 - 40.)

This may sound complex, but a couple of minutes of trial and error will quickly show you how your computer's TAB function works. To start out, try the following program:

```
10 PRINT "12345678901234567890"
20 PRINT "--->"; TAB(8); "X!"
RUN
```

Depending on your BASIC, the X will appear either under the 8 (if your computer numbers columns starting at 1), under the 9 (if your computer numbers columns starting at 0), or under the second 3 (if your computer interprets TAB(8) to mean "skip 8 spaces"). Here's another example:

```
10 FOR X=1 TO 10
20 PRINT TAB(X); X
```

ANATOMY OF A BASIC PROGRAM

Apple II series/Numble

Indent 13 spaces, print TARGET NUMBER : Pick and print a whole number from 0 to 9.	100 HOME	Start with a clear screen.
Skip a line.	110 PRINT TAB(13);"TARGET NUMBER: ";INT(RND(1)*10)	
Start a FOR/NEXT loop to print four lines of random numbers. X assumes the values 1, 2, 3, and 4 as the first, second, third, and fourth lines, respectively, are printed.	120 PRINT 130 FOR X = 1 TO 4	
Start a FOR/NEXT loop to print four random numbers per line. Y assumes the values 1, 2, 3, and 4 as the first, second, third, and fourth numbers are printed on a given line.	140 PRINT TAB(17);	Indent 17 spaces. The semicolon at the end of the line makes the computer stay on the same line in preparation for the next PRINT statement.
End the loop started in line 150: go back to line 150 and increase Y by 1, unless it's already equal to 4, in which case proceed to line 190.	150 FOR Y = 1 TO 4 160 NUMBER = INT(RND(1)*10)	Pick a whole number from 0 to 9. Store that number in a variable by the name of NUMBER .
End the loop started in line 130: go back to line 130 and increase X by 1, unless it's already equal to 4, in which case proceed to line 210.	170 PRINT NUMBER;" ";	Print the number stored in the variable named NUMBER , followed by a space. Do not move down to the next line.
End the delay loop.	180 NEXT Y 190 PRINT	Go to a new line (the semicolon at the end of line 170 had been holding us on the previous line).
Skip a line.	200 NEXT X 210 FOR D = 1 TO 3000	Start a delay loop that will count from 1 to 3000 and then continue with the program.
Indent 17 spaces and print STOP!!	220 NEXT D 230 PRINT 240 PRINT TAB(18);"STOP!!"	
End of the program.	250 END	

THIS HOLIDAY SEASON

Enjoy the World's Sweetest Ham!

The
Spiral Sliced
and
Honey Glazed
Ham from

The Ham You've Heard About

Imagine the eating pleasure you'll share when you serve this fully cooked, glazed, sliced, ready to serve and eat ham from the folks at Culpeper! This sweet and succulent ham is cooked slowly to tender perfection. Then we smoke it over a real hickory fire. Once it is fully cooked and smoked, we spiral slice it—so the thin meat just peels off the bone.

Moist And Sweet

When you taste this ham, you'll find it exceptionally moist and sweet. That's because it's cured with less salt. That's also because we add our own special recipe glaze, made with honey, brown sugar and other good things. The result—a ham that'll make you want to come back for seconds. A ham that'll be a hit with everyone.

Serves a Crowd

One half-ham will serve up to 24 people. And when your holiday feast is over, you can use the leftovers for soups and sandwiches that'll never be forgotten. And serving it is so easy. Just unpack, add garnishes, and you're ready to go. Serve cool, serve at room temperature, or heat it up for hot ham delight!

Free Jar of Honey Mustard

When you order a half-ham from us, you'll get—ABSOLUTELY FREE—an 8 oz. jar of Culpeper's own delicious Honey Mustard. It's made with real honey—you can tell by the consistency! Normally \$4.75 in our store.

CALL TOLL FREE 800-228-8828 and have your VISA, MC, or AMEX CARD READY.

ORDER TODAY FOR THE HOLIDAYS!

YES! Please rush me my SPIRAL SLICED AND HONEY GLAZED HALF-HAM (7-8 lbs). I have enclosed \$46.00 per half ham plus \$3.50 for shipping and handling. Please don't forget my FREE JAR of Honey Mustard. Ham shipped frozen.

Mail This Form To: Culpeper Fine Provisions, Dept. FC6C, P.O. Box 1117, Culpeper, VA 22701

```
30 NEXT X
RUN
```

This next example shows how easy it is to print in columns:

```
10 FOR X=1 TO 10
20 PRINT "LINE"; TAB(8); X
30 NEXT X
RUN
```

As you can see, like all other items you might use in a PRINT statement (numbers, formulas, messages, variables, etc.), the TAB function should be separated from the other items with a semicolon.

THE END

Finally, the END command tells the computer to stop working; it's reached the end of your program. This may be handy if your program ends somewhere other than at the last line. (It can happen!) It also serves as a reminder to you that you've typed in the whole program rather than having stopped in the middle.

NUMBLE REVISITED

With your new knowledge of BASIC, the *Numble* program should be much easier for you to understand. Turn to "The Anatomy of a Program" on page 84 and follow how the program works step-by-step. If you're unsure of how a line works at any point, try making a small change in the line to see what effect it has. Or you can type in the program line by line; type RUN after each line and watch each piece of the program perform. Remember, though, that whenever you have a FOR command, there must be a matching NEXT.

The best way to learn BASIC is to sit at your computer and experiment with different combinations and uses of BASIC commands. You can't hurt your computer by typing the wrong thing; usually, if you type something that BASIC doesn't like, you'll just see an error message saying that it isn't legal. In rare instances, you may have to press the BREAK or RUN/STOP key, or turn the computer off; but when you turn it back on again, it has completely forgotten any errors you might have made and is ready to start again.

With that in mind, you can try making a few modifications to *Numble* to design a program that's closer to your liking. Some changes might be easy; others will require you to do a little hunting in your BASIC manual. Here are some ideas:

The size of the square of numbers (4 × 4) is easy to change. It's controlled by the FOR statements in lines 130 and 150. You can make either or both dimensions larger or smaller. (Try a 3 × 6 rectangle.)

It's even easier to play with the delay loop in lines 210 and 220 to give yourself more—or less—time before the computer says STOP!. The larger the number the computer is counting to, the longer it will take the computer to count.

If you change the numbers used in the TAB functions, you can move things around on the screen. (Atari owners need to use the POSITION command to do this.) You may want to add some PRINT statements to customize the computer screen to your liking.

A more difficult problem—to be tackled only when you're very confident that you understand all the commands used in *Numble*—is to change the program to print a square of randomly chosen letters instead of numbers, creating a word-search game. (Hint: Look up the CHRS function.)

EDITOR'S NOTE: Look for Part II of "Back to BASIC" in next month's issue for another short, fun program that will introduce you to more BASIC statements. We'll also include a list of resources for you in case you want to expand your BASIC knowledge.

Atari 400/800, 600/800XL, & 130XE/Numble

```
100 PRINT CHR$(125);
110 PRINT "TARGET NUMBER: ";INT(RND(1)*10)

Drawing Icons

Special Function Icons

Since publishing the Atari, Commodore, and IBM PC (actually PCjr and Tandy 1000) versions of *Christmas Tree Construction Set* last December, we've been flooded with requests for translations for other computers. This year, we're presenting Apple and IBM PC versions of the program.

With *Christmas Tree Construction Set*, your family can create its own version of the "perfect" tree and decorate it—right on your computer screen. You can let your Christmas creativity run wild: Create trees of different shapes and sizes, build wreaths, and generally "deck the halls" to your heart's content. Each family member can SAVE his or her best work on disk, so you can display a different tree every day. These trees don't need to be watered and never lose their needles—and you

don't have to rearrange the furniture to set them up!

USING THE PROGRAM

Christmas Tree Construction Set, like the commercial "construction set" programs on which it's modeled, lets you use a joystick to select small pictures or "icons" (an ornament or a piece of tinsel, for example), and place them on a screen to form parts of a larger picture. Across the top of the screen you'll see the 10 images you can choose from, including evergreen boughs of various shapes and sizes. To the right are four boxes containing icons for special functions you can perform.

To draw on the screen, use the joystick to move the cursor to the symbol or icon you want. Then press the joystick button. The cursor disappears, and when you move the joystick, a copy of the icon moves with it.

HOLIDAY PROGRAM

When you've positioned the icon where you want it in the drawing area, press the button again, and a copy of the icon you are "holding" will be "stamped" on the screen. You can then move the icon and "stamp" it elsewhere in the drawing area, or you can return to the top of the screen and select a different icon.

To use one of the special functions, move the cursor to the box for that function and press the button. The eraser icon lets you clean up mistakes on the drawing screen. Just move the eraser over the area you wish to erase, while holding down the button. The "crossed-out tree" is for clearing the entire drawing screen and starting over; use it with caution. The large candle is for special effects: selecting it will play a tune to round out the cheery mood.

Press the button again to continue drawing.

The disk icon is for **SAVING** and **LOADING** your creations to and from disk. When you select it, you'll see another screen, where you'll be asked to enter an appropriate command and file name. (Don't worry—your picture is still safe until you actually **LOAD** another one over it.) If you decide you don't want to **SAVE** or **LOAD** a picture, just press **RETURN** or **ENTER** at the command prompt and you can continue drawing.

The simplicity of *Christmas Tree Construction Set* makes using it an ideal holiday pastime for young children, since it's easy to produce attractive results without a great deal of coordination and skill. Kids will be pleased at the quality of the designs they can create and will enjoy **SAVING** them and showing them off.

Apple II series w/joystick & disk drive/*Christmas Tree Construction Set*

HOLIDAY PROGRAM

IBM PC & compatibles w/joystick & disk drive/ Christmas Tree Construction Set

This program has been tested and found to work on the following computers and hardware configurations, using the BASICs shown: IBM PC w/Color/Graphics Monitor Adapter and Advanced BASIC A2.00. It should also work on many other PC compatibles.

of PrintMaster™

Introducing the Affordable Desktop Publisher...

Bring the publishing world within reach of your pc and dot-matrix printer.

Available at your local dealer

In less than an hour, you can be a publisher of attractive and functional newsletters, brochures, manuals, ads, rosters, schedules, bulletins, menus – just about anything you can imagine.

No printing, typesetting, or graphics experience is required. Whether for business, pleasure, school, or an organization, you can satisfy your publishing needs without complication or expense.

NewsMaster features a variety of layouts and designs:

- 1 to 10 columns per page
- up to 99 pages in a single document
- 10 fonts in a variety of sizes
- fonts with bold and italic typefaces
- over 100 pieces of clip art
- vertical lines, horizontal lines, and box lines of any width
- 20 fill patterns
- use with Art Gallery I and Art Gallery II, from Unison World

NewsMaster makes editing a dream:

- automatic text flow around artwork, from column to column, and from page to page
- screen shows full page or one of 8 "zoom" views
- on-screen help for all commands
- cut and paste both text and artwork
- fully integrated text and artwork
- can read files created with most word processing programs

Available on the IBM PC and compatibles. Requires color adaptor with color monitor or Hercules™ monochrome adaptor with monochrome monitor, and 256K memory

Unison World
2150 Shattuck Avenue
Berkeley, California 94703
415-848-6666

"The Twelve Days of Christmas"

BY JOEY LATIMER

"The Twelve Days of Christmas," a very old and unusual cumulative carol from England, has become one of the most popular Christmas carols in the 20th century. At FAMILY COMPUTING, we like it so much that we have put together a program

making it possible for your computer to play the familiar melody, while simultaneously printing the lyrics on your monitor.

Once you have typed the program into your computer and saved it to disk or tape, you can gather your family and friends around the computer for a fun, old-fashioned sing-along. If you get tired of the traditional lyrics included in the program, it's easy to replace them with your own verses, although they may not format easily, or try the extra set of lyrics the staff at FAMILY COMPUTING has put together (see below). This is done by replacing lines 1050-1160 with the following DATA statements:

1050 DATA AND A BRAND NEW ATARI ST.
1060 DATA "TWO PC CLONES,"
1070 DATA "THREE FAT MACS,"
1080 DATA "FOUR COMMODORES,"
1090 DATA "FIVE FLOPPY DISKS,"
1100 DATA "SIX KEYBOARDS CLICKING,"
1110 DATA "SEVEN SPELLING CHECKERS,"
1120 DATA "EIGHT MODEMS DIALING,"
1130 DATA "NINE DATA BASES,"
1140 DATA "TEN INTERFACES,"
1150 DATA "ELEVEN PRINTERS PRINTING,"
1160 DATA "TWELVE DISK DRIVES SPINNING,"

Apple II series/The Twelve Days of Christmas

At Last! A Chess Program that's On YOUR Side!

FREE 3-DAY DELIVERY!

**Paul Whitehead
Teaches Chess
\$49.95**

BOARD 180
MOVE 3 White
Hit Choice
1=Mf3
2=cxd5

Chigorin's Defense. A fighting defense. Black develops a piece and attacks in the center. White's Choice: 1=Mf3 is a good developing move; 2=cxd5 is premature.

Now, over 40 hours of interactive animated chess instruction are yours, from the mind of an American Open Champion. For beginners to seasoned tournament players, the techniques of a top master are exposed!

Here is a sampling of what you will see come to life on the screen:

- Rules
- Chess Notation
- Opening Principles
- Piece Development
- Surprise Checks
- Greed
- Traps
- "Desperado" Moves
- Pins
- Forks
- Skewers
- Overloaded Pieces
- In-Between Moves
- Back-Rank Checkmate
- Smothered Mates
- Stalemates
- Sacrifices
- Blockades
- Fianchettoes
- The Lucena Position
- King & Pawn Endings
- The Active Rook

- OPENINGS:**
- King's Gambit
 - Ruy Lopez
 - Scotch Game
 - Giuoco Piano
 - Petroff's Defense
 - Alekhine's Defense
 - French Defense
 - Sicilian Defense
 - Caro-Kann
 - Pirc Defense
 - Center Counter
 - English Opening
 - Bird's Opening
 - Larsen Attack
 - Sokolsky's Opening
 - Benko's Opening
 - Grob's Attack
 - Queen's Gambit
 - King's Indian
 - Benoni Defense
 - Nimzo-Indian
 - Queen's Indian
 - Dutch Defense
 - Gruenfeld Defense
 - The Dunst Opening

... and more!

ROAD MAPS

Each package includes a detailed two-sided ROAD MAP that lets you keep track of your journey through the tutorial database. The Road Maps label the parts of the tutorial both by topic and by Board Number. Using the Board numbers and the EXPRESS DEPOT feature, you can hop around the tutorial at will. You can also skip over material you already know.

**FREE!
COFFEEHOUSE
CHESS
MONSTER**

When you want to test your new knowledge against an opponent, a single key calls the COFFEEHOUSE CHESS MONSTER opponent program. It will automatically set up the position you were viewing in the tutorial, offer you a new game, or let you enter a game from a newspaper listing. This is a fully-featured opponent program, which allows you to save an unlimited number of your own games onto disk, modify them, print them out, and re-animate them later.

WHERE IN THE WORLD IS CARMEN SANDIEGO?

The Master Detective Thriller That Takes You Around the World

Here is an adventure game every family member will want to play. Your pursuit of 10 master thieves takes you through 30 different countries where you must investigate the geography, history and customs in order to match wits with the evil-doers. You can get help in your search with a special edition of The World Almanac included in the program.

This fascinating program combines the best of graphics, trivia games, mysteries and arcade animation to introduce the basics of geography, research and investigation.

ONE-ON-ONE

A Shoot Out Between Dr. J and Larry Bird

Who is the greatest player in basketball? Dr. J? Larry Bird? Take your pick; then take his place. Make his move, his fakes, his favorite shots, even his shooting percentage. It's all in One-On-One's program, the result of thousands of photographs from every spot on the court.

One-On-One lets you play against the computer or against a friend. There's a three-point play and a 24-second shot clock, even hot streaks that improve your shooting and a fatigue level that affects your play.

One-On-One's realism is so great it includes backboard-shattering dunks and an instant replay when the computer credits you with a particularly good play. But, most of all, One-On-One gives you the magical feeling that you are Dr. J or Larry Bird.

MILLIONAIRE

Capture the Excitement and Risk of the Stock Market

Now you can make a killing in the stock market—without getting killed.

In this highly realistic simulation, you start as a novice with \$10,000 and a choice of fifteen different stocks. If you are able to master the fluctuation in the market well enough to increase your net worth to certain levels, you can then buy stocks on margin and purchase call options.

You progress through Investor, Speculator, Professional and Broker rankings as your net worth increases, using the whole spectrum of market techniques until you become a millionaire. Then you start on your second million and this state-of-the-art investment fantasy becomes even more thrilling.

THE AMERICAN CHALLENGE

Championship Sailing Without Getting Your Feet Wet

This dynamic simulation captures the excitement and challenge of real-life sailboat racing. Beginners have the time of their life while learning the basic principles of sailing. Experienced sailors compete on a variety of race courses leading up to the ultimate challenge: beat the Aussies' formidable record and win back the Cup and America's sailing pride!

If you'd rather cruise than sail, there's a motorboat you can take for a test drive in the bay, or a spin on one of seven daredevil race courses. So don't let the rainclouds discourage you. With THE AMERICAN CHALLENGE you can enjoy a delightful boatripe anytime, in any weather.

THE STOCK MARKET SIMULATION™

SUCCESS WITH TYPING

The Quickest Way From Computer Mystery to Computer Mastery
Now you can learn to type and use your computer to its fullest potential, both at the same time.

Success With Typing's step-by-step program makes it easier than ever to learn touch typing. Its eighteen lessons take you through everything from practice drills to speed tests. The unique Advice Function examines your progress in each practice drill, analyzes your strengths and weaknesses and advises you what to emphasize in your next drill. As you gain typing mastery, you will learn the building blocks of computer use. First the concept, structure and set-up of a database; then practice in word processing skills.

Success With Typing is the keyboard course that's so comprehensive, all you need is fingers!

FIRST DRAFT

The Cure for Writer's Block!

Whether you're writing a term paper, a sales presentation or community newspaper, you know the hardest part of writing is getting started. Well now there's the silent partner you've been waiting for. Someone to brainstorm ideas with, help you organize your thoughts and put your facts into logical order.

First Draft does all these things plus much, much more. This simple-to-use software automatically numbers your ideas, ranks and sorts them for you and displays or prints them in standard outline form—all with a single keystroke! You can use First Draft as a word processor to enter, delete, rearrange paragraphs and print out documents. Or you can insert your completed First Draft outline into any major word processing program.

First Draft is a breath of fresh air for students, executives and professional writers.

MICROZINE

The Amazing Software Library from Scholastic

This award-winning series for children 8-12, raises interactive learning to new heights. Every issue of Microzine contains 4 totally original full-length programs, each designed to give children the problem-solving and critical-reasoning skills today's school curriculum demands. Microzine has everything... from reading and language arts programs to history, geography and economics. From Science programs to graphics. Even real-life utility programs, like filing systems and databases.

SPECIAL INTRODUCTORY OFFER!

We're sure that once you try Microzine, you'll want to become a regular subscriber. That's why we're willing to send you your first issue for only \$4.99. Just a fraction of the retail value. Then if you approve, we'll send you a new issue with 4 new programs about every 8 weeks. We will bill you \$29.95—just \$7.49 per program—for each issue you keep. You can return any disk you don't want within 10 days and can cancel at anytime simply by notifying us.

GOLF'S BEST

Exact Replicas of the Greatest Courses in the World

How would you like to play St. Andrews, where the wind gusts from the Firth of Forth like a gale? Or tackle Pinehurst, with more bunkers than the Maginot Line? Now you can, because Golf's Best simulates every trap and tuft of rough, every gust of wind, that makes these courses such legendary tests of skill.

On each course, you'll select the Championship or Medal tees. You'll choose the clubs. You'll decide how hard to hit, the exact direction of each shot, and whether to hit straight or hook.

Don't expect to shoot par. These courses are as tough as the originals. Will you break 100? 90? 80? Tee up and find out!

SCIENCE TOOLKIT

Experience the Thrill of Scientific Discovery

Everything you need to perform real—not simulated—laboratory experiments. Two sensory probes—a thermistor and a photocell—and an Interface Box which connects these two sophisticated pieces of equipment to your computer. Plus four on-screen instruments—a thermometer, a light meter, a timer and a strip chart.

The easy-to-use software allows you to read, analyze and manipulate data, and print out a record of your results with step-by-step instructions for performing scores of experiments, including investigating the behavior of plants, chemical reactions, concepts of time, motion and the physiology of your own body.

We can ease your mind...

and put your computer away.

Introducing TaskMaster Mobile Workstation with Security.

An ergonomic workstation that organizes the entire computer system, adds mobility, and secures it from theft.

Check these outstanding features...

Compact Size. Easy to maneuver.

Fully Locking. Secures the entire computer system and printer compartment.

Slide-out Printer. Heavy duty hardware plus casters will handle most printers.

Adjustable Inner Shelves. Set-up the computer the way you like it and adjust the monitor height.

Cable Management System. Keeps the cables out of the way.

Rear Access Door. Easy access to components for installation or removal.

Optional Surge Stopper Electrical System. All power controlled by one switch. 12 ft. cord.

Popular Colors. Available in Oak, Walnut or Putty laminates.

Order today by phone or mail.

MicroLand Furniture Co. Inc.

17 Madrone Ave.
San Anselmo, CA 94960

ALL NEW

COMPUTEREYES/2™

VIDEO DIGITIZING SYSTEM FOR APPLE II SERIES COMPUTERS

The world's highest-quality, lowest-priced video digitizer has just gotten even better! The new card-based COMPUTEREYES/2™ for Apple II, II+, IIe and compatibles connects to any standard video source to capture real-world images on your Apple's graphics display. Hundreds of applications!

COMPUTEREYES/2™ features include:

- Fast scanning—single 6 second scan for all capture modes
- Automatic and manual control over both brightness and contrast
- Keyboard-controlled video switching to allow previewing the video source on the Apple monitor.
- New, familiar, Appleworks-style menu
- Standard software supports Apple Hi-Res and Double Hi-Res graphics, plus Gray-Scale boards for really superb images!
- Optional COMPUTEREYES/2™ Enhancement Software package available to convert COMPUTEREYES images to Printshop, Printmaster, Newsroom, and other formats, perform image negate, flip, etc.
- Also available as complete system including quality video camera

STILL ONLY \$129.95

LEARN TO TYPE QUICKLY, ACCURATELY
AND FOR KEEPS. WITH...

Type! from Brøderbund is the first software program to take advantage of extensive research on how you learn to type.

It doesn't matter whether you're a beginner or nearly an expert. **Type!**'s interesting lessons and advanced diagnostics can help you—by displaying detailed graphs of your performance and by recommending customized exercises to improve your speed and skill. The program can even save daily results for several people and print out progress reports.

Type! also includes an exciting, arcade-style typing game that will both challenge and entertain you.

Available for... IBM, PC, PC XT, PC AT* and 100% compatibles; Apple II+//IIe/IIc; and Commodore 64/128.

*Supports IBM Monochrome Display Adapter, IBM Color/Graphics Adapter, Hercules Monochrome Graphics Card.

Type! is a trademark of Brøderbund Software, Inc.

Look for **TYPE!** at your local dealer or fill out the order form below, put it in an envelope and mail to:

NEW FROM SCHOLASTIC!

KIDS LOVE MATH WHEN THEY MANAGE THE MATH SHOP™

The Math Shop, with everything from groceries to lumber, makes math more exciting for children 9 through 14.

Children put their math skills to work as they make change, measure goods and pack purchases. They use practical math, from working with fractions to using ratios, decimals and proportions. They can move from job to job, competing against the clock, with tasks getting harder. Scores—the number of customers served—are displayed on the screen, so there's instant reward and motivation.

For Apple II series, 64K, Tandy 1000, IBM PC and compatibles

To order, just call 1-800-325-6149.

Still Searching?

MAC Version

now
available

What does the
Bible say? And
where?

We offer an integrated family of software products that allow you to search the Bible as never before.

With "THE WORD Processor" software (which includes the complete text of the KJV or NIV Bible) you can create indexes on key words, phrases, even concepts, as well as search, display or print, for just \$199.95. Greek and Hebrew Transliterator products which include Strong's Concordance are also available. Or choose from a host of other exciting Biblical software products available in varying price ranges.

So if you're still searching, give us a call. We're anxious to show you how your PC can help you access your Bible as never before.

BIBLE RESEARCH SYSTEMS

2013 Wells Branch Parkway, Suite 304
 Austin, Texas 78728 (512) 251-7541

Include \$3.00 for postage and handling. For Apple, IBM PC, Commodore 64, TRS80, Macintosh, CPM 2.2, MS-DOS.

TIPS TO THE TYPIST

BEFORE TYPING IN A PROGRAM . . .

1. Check to see if it will run on your computer under a version of BASIC you have available. Also check to see if special hardware—a disk drive, joysticks, or a printer, for example—is required. Unless the program heading indicates otherwise, you can assume that a program will run under any standard version of BASIC on any standard hardware configuration of your machine, with these exceptions:

- “Apple II series” programs will run under Applesoft BASIC on the Apple II plus (w/language card), IIe, and IIc. Programs requiring a disk drive will work equally well under DOS 3.3 or ProDOS.

- Compatibility of IBM BASIC Programs is determined by both the hardware and the version of BASIC used. Our “IBM PC & compatibles” programs are composed on IBM PCs & PCjr’s and tested under most versions of BASIC available for those machines. They are then tested on a variety of IBM-compatible machines under the versions of BASIC supplied with them. Each IBM PC & compatibles program listing is supplemented by a rundown of the machines and versions of BASIC under which the program is guaranteed to work. Most programs will probably run on many other PC compatibles and under other versions of BASIC.

- TI programs not marked “w/TI Extended BASIC” should be run under standard (console) TI BASIC.

2. If you have a disk drive, prepare (“format” or “initialize”) a disk so you can save the program once you’re finished typing. Your DOS (Disk Operating System) manual or disk-drive manual will tell you how.

3. Get your version of BASIC fired up and ready. Read the introductory chapters of your BASIC manual for instructions.

WHILE TYPING, KEEP IN MIND THAT . . .

1. BASIC programs consist of “lines,” each beginning with a line number (Macintosh BASIC “lines” don’t need line numbers), containing letters, numbers, and punctuation marks of various kinds. Each “line” may be composed of several “statements”—instructions that tell the computer to perform various actions—and may continue over several physical lines on the page and/or on your screen.

When typing in a BASIC program, forget considerations of format and get the *content* of what you type to match the *content* of what you see on the printed page. Regardless of how margins may break up a program “line,” it hasn’t ended until you reach another line number or the end of the program listing. Begin typing with the line number, then continue on, typing every letter, number, space, and punctuation mark in the order it appears, ignoring margins. Where the “line” ends, there will usually be some trailing spaces (which you don’t have to type in), followed by the next line number at the left margin of the listing. At this point, all you have to do is press the RETURN or ENTER key to register the “line” in memory, then continue with the next “line.”

2. All marks in a program listing—including every letter, number, space, and punctuation mark—*mean* some-

thing to your computer. Moreover, even symbols that look very similar to you mean completely different things to the machine. For example, it is important to distinguish between “1” (number one) and “l” (small letter “L”), or “O” (capital letter “O”) and “0” (digit zero). Note that zeros are slashed in most program listings to facilitate discrimination.

It’s important, therefore, to duplicate every line exactly when typing. Otherwise you can’t expect the program to work as it should, or even work at all. Even uppercase versus lowercase is important on certain computers; the words “PRINT” and “print” may mean completely different things.

3. Each computer has its own commands and keys for program “editing,” and your user’s manual will tell you how to use them. Besides the editing keys, there are two sure-fire ways of correcting errors in a BASIC program line. If you’re just typing along and make a mistake, press the backspace-delete key (the back-arrow key on most systems) to rub out the offending character, and then continue typing. Once you’ve pressed RETURN or ENTER to register the line, mistakes are a little harder to fix. You must use the editing keys or type the line in again from the beginning (including the line number) and press RETURN or ENTER. The new line will replace the old one with the same line number in your computer’s memory. This option is a little more work, but foolproof.

AFTER YOU’VE FINISHED . . .

1. Just type RUN and press RETURN or ENTER. If you’ve typed everything correctly, the program should work as described.

2. Of course, it almost never does, not even for seasoned programmers. Typing in a program and having it run off the bat qualifies as a small miracle. Usually there are one or more mistakes, major or minor, that have slipped past your careful scrutiny and are causing your computer to do unexpected things. Not to worry. Now comes what some people consider the most enjoyable part of the programming process: a procedure called “debugging”—finding and eliminating your mistakes. To review portions of your program on the computer screen, use the LIST command as explained in your BASIC manual. If you have a printer, you might find it more convenient to print out what you’ve typed (check your manual for the appropriate command). Look over each section of the program carefully, preferably with someone else’s help. Make sure you haven’t dropped a line or a character, miscounted spaces between a pair of quotes, mistaken a comma for a period, mixed up an “O” and a zero, or (most likely) all of the above. When you find a mistake, retype the offending line from the original listing, including the line number, and press RETURN or ENTER as explained above.

Naturally, mistakes tend to occur more frequently in certain areas of a program than in others. Complicated equations are easy to foul up by dropping or mismatching parentheses or math symbols. Data statements—program lines beginning with the usual number, followed by the word DATA—are another popular trouble spot. Check them carefully. And, of course, remember to SAVE a copy of the corrected program when you’re finished.

Good luck!

Stickybear® Printer and Picture Library 1

2 exciting print programs made for each other!

The lively assortment of paper products that you create — folding toys, stand-up towns, greeting cards, and much more — begins with *Stickybear Printer*. Choose from the large library of backgrounds, borders, and typefaces to build your creations. This neat one-disk program lets you see your creations on screen as you compose them! *Stickybear Printer* is simple enough for children, but challenging enough for adults!

Team *Stickybear Printer* with *Picture Library 1*, and you've tripled your creative output at once! Add *Picture Library's* two-disk program, full of hundreds of new pictures, backgrounds, typefaces, and patterns to your *Stickybear Printer* program — and create professional quality stationery, charts and signs, and 3-D storybooks in color.

"Store-bought" wrappings and greetings are a thing of the past! To celebrate births...birthdays...holidays... turn to *Stickybear Printer* and *Picture Library 1*!

Stickybear Printer Picture Library 1 requires the Stickybear Printer program and any computer in the Apple® II family. Color monitor suggested but not required. Stickybear Printer supports these printers: Apple Image-writer Color and Black/White; Apple Scribe Color and Black/White; Okidata 92.192 Standard Microline; Okidata 292 Microline Color and Black/White; Okidata Okimate Color and Black/White; C. Itoh Prowriter; C. Itoh 8510 Color and Black/White; Epson FX80.LX80; Epson JX80 Color and Black/White; Panasonic 1080.

K-POWER

FOR THE COMPUTER GENERATION

Dream Machines

K-POWER Readers Design the Computers of Their Dreams!!

Last summer, when we held our "Design a Computer Contest," K-POWER readers planned, drew, and described their "perfect" computers. Some K-POWER readers proved themselves to be inventors, artists, engineers, draftspeople, and comedians all rolled into one. Boy, what vivid imaginations some of you have!!! Two computers stood out above the rest, and FAMILY COMPUTING awarded \$25 to the creators of these machines. **Scott Doudera**, 15, of Alma, Illinois, designed the Titanic II, and **Jason Tucker**, 13, of Muncie, Indiana, designed the Eclipse Personal Computer. Here are their drawings and descriptions.

TITANIC II

The Super New Computer From SD Enterprises

• The most exciting feature of this new genre of computers is its revolutionary and new, artificial-intelligence brain. It has the exciting voice of, you guessed it, Ricardo Montalban! Ooooooh! Don't pinch yourself. You're not dreaming.

Scott Doudera's outlandish computer.

- Handles make the computer totally portable.
- An I.V. bottle provides nourishment for the hacker who isn't able to go for food.
- A swimming pool, located majestically atop the artificial brain, gives hours of relaxation to the tired hacker.
- There's a manual override for data processing, which consists of a pencil and a ballpoint pen.
- A handy modem provides 300 baud to the patient user.
- An open-grill barbeque gives a good taste to all meats.
- A good shower is perfect for the user who labors at the keyboard for weeks at a time.
- A handy little robot provides defense against maniac burglars. Two built-in flame-throwers and five submachine guns provide adequate protection against most thieves.
- A food vac contains all vital (I mean vital) snacks that the hacker must have to survive, such as pizza, chips, and sodas.
- This machine costs only \$399.98. —SCOTT DOUDERA, 15, Alma, Illinois

Eclipse Personal Computer

Software included:

- A built-in word processor, game maker, and spreadsheet.
- EclipDOS 2.2 Disk Operating System

- EclipDraw graphics program

Hardware included:

- mouse
- 3½" dual disk drive
- 93-key keyboard
- RGB monitor
- numeric keypad

Other features included:

- 14 redefinable keys
- built-in speech and stereo sound
- one megabyte of RAM
- 512K of ROM
- Made in the USA, the machine costs only \$2,000.—JASON TUCKER, 13, Muncie, Indiana (*Jason's "Design a Computer Contest" entry was created with Dazzledraw by Broderbund.*)

Jason Tucker sent his designs to K-POWER on a disk. Above are two examples.

STRATEGY

TIPS, TRICKS, AND HINTS

STRATEGIC CONQUEST

PBI Software. Tactical/Strategy. Your mission: Explore and conquer a vast, unknown world. You must create land, air, and naval forces (such as armies, bombers, aircraft carriers, and submarines) and deploy them against a computer opponent who wants to conquer the world. (*Hints and game are for Macintosh.*)

Once you've taken control of the island you start on, it's important to determine the direction in which the computer opponent lies. If it's not within fighter range (10 squares), build a destroyer and send it out to search for the enemy. Meanwhile, build a transport, load it with armies, and send it out in a random direction (unless you've located another island when scouting with a fighter).

Block enemy harbors with battleships.

If the enemy is close by, you will have a good chance of capturing a city on its island before the enemy does. This is often a good idea, because if you are able to establish a firm beachhead, the computer will concentrate on beating you back rather than exploring and conquering additional territory.

If the enemy is not close to you, it is best to send transports to conquer an island within bomber range of its island. Then, if the computer's starting area is near the center of the map, try to go around it and conquer the territories on the other side. If the enemy is near an edge, surround the enemy as quickly

Surround your city with armies to block enemy bombers.

as possible. The computer, however, is not going to just sit there and be idle, so it is wise to send ships to distract and engage its forces. Perhaps the best way to accomplish this is to scout its coastline with a destroyer and locate its port cities. Then bring in battleships (once you have two or three transports, start building battleships in your port cities), and place them directly next to the enemy port cities. This way, if the enemy builds a ship or transport, it will have to pass by your battleship, and you can sink it.

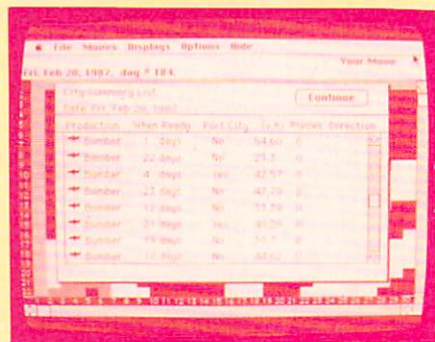

Before the first hundred days are up, build two or three bombers. Although they are not particularly effective, they make good "battleship busters." If you encounter an enemy battleship, it's best to simply bomb it because it can be difficult to sink.

This is a winning screen.

The key to the game is using the bomber. You really only need armies to conquer neutral cities and to maintain a defense against enemy invasions (which will be rare if you block enemy harbors). If you can get 10 to 20 cities all producing bombers at regular intervals (a new bomb-

er every one or two days), you will be almost unstoppable. Every time a new bomber is made, fly it to an enemy island and bomb any city you can (stockpiling more than two or three bombers is not a good idea). Make sure you time your strikes so that when the bomber runs out of moves for the day, you leave it over the water but within 10 squares of the target city. This way, enemy armies can't attack you, and you are less likely to be discovered by enemy fighters. Soon after you start this

Bombers are the key to winning.

saturation bombing, you will find it takes the enemy longer and longer to reclaim its cities. When it starts taking more than three days to do so, bring in your troops and capture the coastal cities. After this point, victory is almost certainly yours.

Battleships can also be used to lure enemy fighters. If you position a battleship near an enemy island, the enemy will start sending swarms of fighters after the battleship. The battleship will be able to destroy well over 15 fighters before it is sunk. And if you retreat in time, you can go to one of your harbors and repair the ship. This is an extremely effective way to drain enemy resources.

Do not try to contribute to the defense of a port city by placing a ship in it. A single enemy army can dispatch a battleship quite readily.

Submarines are not very effective because they move too slowly, and they don't possess enough strength to do serious harm. →

THE FIRST MATH SOFTWARE THAT THINKS LIKE A TEACHER

Works with Apple II series (64k)

**Introducing MATH TUTOR.
The first totally customized program that
knows how to teach your child basic skills.**

There's never been a math tutorial like this before. The MATH TUTOR is an integrated system of programs, one for each arithmetic operation, that starts by evaluating children's math skills and placing them into one of more than 40 skill levels. Then MATH TUTOR works with each child at their own individual level, at their own pace.

Builds strong math skills in three ways.

The Addition, Subtraction, Multiplication and Division modules all use the same teaching techniques proven in schools across the country. First the MATH TUTOR introduces a new concept by giving demonstrations and examples.

Then students work interactively with the program. Unlike other math software which just shows *when* you make an error, the MATH TUTOR patiently teaches *why*, so your child gains a true understanding. Only when your child has learned the present skill level thoroughly will the MATH TUTOR move them ahead to the next—so mastery of each math concept is virtually guaranteed!

Finally, there's independent practice, with a mixture of problem types. The MATH TUTOR corrects each error as it happens. So your child gets the immediate feedback necessary to build confidence and provide new-found self-motivation.

Best of all, this MATH TUTOR is available right in your own home, 7 days a week, 24 hours a day!

Special Introductory Risk-Free Offer

Explore the MATH TUTOR in your own home, for 15 days. If you're not convinced this amazing program can help your child improve his or her math skills, return the package in resaleable condition for a full refund.

For a limited time, each MATH TUTOR module costs just \$29.95, including shipping and handling. That's 33% off the regular \$39.95 price.

To order MATH TUTOR for your child, ask your dealer or call 1-800-325-6149, or send this coupon to:

 **Scholastic Inc.**
P.O. Box 7502

How to order

To get the fastest delivery of your diskettes, phone your order directly to our order desk and charge it to your credit card. Written purchase orders are accepted from approved government agencies and most well rated firms at a 10% surcharge for net 10 billing. For maximum savings, your order should be prepaid. All sales are subject to availability, acceptance and verification. All sales are final. All prices are in U.S. dollars. Prices, terms and specifications are subject to change without notice. No rainchecks on out of stock items. Not responsible for typographical errors. A \$5.00 additional handling fee will be charged for all orders with a merchandise total under \$50.00. All shipments are F.O.B. CEI warehouse in Ann Arbor, Michigan. No COD's. Non-certified checks require 3 weeks bank clearance. Michigan residents add 4% sales tax or supply your tax ID number and reason for tax exemption.

For shipping charges add \$6.00 per 100 diskettes and/or any fraction of 100 5 1/4-inch or 3 1/2-inch diskettes. Add \$1.00 per data cartridge or head cleaning kit for U.P.S. ground shipping and handling in the continental U.S. For Canada, Puerto Rico, Hawaii, Alaska, or APO/FPO delivery, shipping is three times the continental U.S. rate.

Mail orders to: Communications Electronics Inc., Box 1045, Ann Arbor, Michigan 48106-1045 U.S.A. If you have a Discover, Visa or Master Card, you may call and place a credit card order. Order toll-free in the U.S. Dial 800-USA-DISK. In Canada, order toll-free by calling 800-CA1-DISK. If you are outside the U.S. or in Michigan dial 313-973-8888. Telex anytime 671-0155 (6710155 CE UW). Order your disks from CEI now.

HOW TO MAKE A FORTUNE

ing K-POWER mail, and judging contests like this one!!!

Have you made any money using computers? What did you do? How much did you make? How did you come up with your money-making idea? Are you still rolling in dough? Tell us how you made your fortune (big or small). The reader with the best story will win \$25 and see his or her story in a future issue of K-POWER. Send your stories, along with this contest entry, to "How to Make a Fortune," K-POWER, 730 Broadway, New York, NY 10003, by December 24, 1986.

By now, you must have at least 1,001 uses for your computer. You may write letters, make music, play games, track your stamp collection, budget your allowance, and so on, and so on, and so on—all with your computer. But what's your favorite use for your computer? Game playing? "No way," said the hackers that hang around the FAMILY COMPUTING office. "Making money!" they all sang in unison. One kid works part-time at a company, typing results from a poll into a data base. Another fills his pockets with bucks by running

his own computer business. And, of course, the SPECIAL KS make money reviewing computer games, boning up on their gaming strategy, open-

NEW HARDWARE & ACCESSORIES

COMPUTERS

CompuTitan

MANUFACTURER: Mitac Corporation
ADDRESS: 3385 Viso Court, Santa Clara, CA 95054; (800) 321-8344
PRICE: \$1,695

One of the latest IBM clones from the Orient is Mitac's CompuTitan, due to reach U.S. dealers in time for holiday buying. The suggested retail price of this PC/AT-compatible system is \$1,695; that gets you an Intel 80286-based CPU that runs at speeds of 6 or 8 MHz, one 1.2 Mb floppy-disk drive, a hard-disk drive

controller, and a healthy 640K of RAM. You can choose options such as a 20-, 30-, or 40-megabyte hard-disk drive or Mitac's own enhanced graphics adapter (EGA). A monochrome or RGB monitor and a display adapter must be purchased separately.

The standard configuration of the CompuTitan includes a battery-backed real-time clock/calendar, the keyboard and a standard 8742 keyboard controller, eight expansion slots, a 192-watt power supply, and the highly IBM-compatible Phoenix BIOS. If you're planning to use the computer for number-crunching, such as statistics or heavy finance applications, there's also a socket where you can add an Intel 80287 coprocessor chip. MS-DOS 3.2 and GW BASIC are also standard with the machine.

Lower production costs enable Mitac, a 12-year-old Taiwanese electronics manufacturing firm, to distribute a computer with all these features and options at such an appealing price. CompuTitans bought at dealers carry a six-month warranty, but there's a word to the wise: Mitac is still negotiating for a na-

tional service contract. They expect to have one within the next three months, according to a company spokesperson.

ACCESSORIES

Vega Deluxe

MANUFACTURER: Video-7
ADDRESS: 550 Sycamore Drive, Milpitas, CA 93035; (408) 943-0101
PRICE: \$599

If you're the owner of an IBM or compatible computer and don't have a graphics adapter, that peripheral is probably high on your add-on wish list.

High resolution, IBM compatibility, and the flexibility to switch easily between different types of software are the hallmarks of a new high-resolution graphics adapter from Video-7. The Vega Deluxe also supports all major industry graphics adapter standards, such as the Monochrome Graphics Adapter, Color Graphics Adapter, Hercules Graphics Card, and Enhanced Graphics Adapter.

Microsoft Windows comes with the Vega Deluxe as an introductory offer until December 31, and you can buy the card in the standard EGA resolution of 640 x 350 or in optional resolutions of 640 x 480 and 752 x 410.

You won't have to think about changing modes once the program is up and running since the Vega Deluxe comes with menu-driven software. This enables the card to automatically select the right mode for emulation of the above graphics adapters. The Deluxe is a "short slot" graphics adapter that can be installed in any available slot of an IBM PC, PC/XT (including slot 8), PC/AT, or IBM-compatible computer.

Available now through computer

retailers, the Vega Deluxe carries a suggested retail price tag of \$599 and comes with a limited two-year warranty. A second oscillator is what gives the Deluxe higher resolution than the original Vega adapter, which will continue to sell for \$499.

Bodylink

MANUFACTURER: Bodylog, Inc.
ADDRESS: 34 Maple Avenue, Armonk, New York 10504; (914) 273-6480
PRICE: \$150-\$240

Your body is pumping out invisible signals 24 hours a day. Your heart is beating, your blood is pulsing, your temperature is rising, your muscles are in motion, and you're perspiring. You're hardly aware of it, but your body is a walking transmitter!

Bodylink, the new Commodore peripheral from Bodylog, Inc., transforms the signals from inside your body into something your computer understands (i.e., digital information), and transforms the data into something *you* understand (graphics and sound). You can use this information to "listen" to the signals your body is producing and learn to control them to relieve muscle tension; build muscles by computerized isometric exercises; play a computer game and get a workout at the same time; improve coordination; and monitor heart rate, blood pressure, temperature, muscle tension, respiration rate, and other processes of the body.

Bodylink is a peripheral that plugs into the Commodore 64/128 computer. Various sensors record internal body signals and relay them through Bodylink to the computer. When you buy a Bodylink package (\$150-\$240), it will include sensors and the appropriate cartridge software for one of four basic functions: muscle coordination, aerobic exercise, stress reduction, or isometric exercise. Depending on what additional body function you want to monitor, you can add sensors (\$40-\$100) to measure temperature, respiration, pulse rate, heart rate, blood pressure, and EEG (brain waves). Sensors must be used with the appropriate software, ranging from \$30-\$90; professional-applications software costs up to \$180. A demonstration program comes free with each basic Bodylink package.

LOOKING FOR THE BEST VALUE IN PC/AT COMPATIBLES?

INTRODUCING THE \$1495 A★STAR™

Looking for a lower priced, higher quality PC/AT compatible than our new A★Star™ is like looking for a needle in a haystack. You're more apt to come up with a case of hayfever.

A★Star gives you features you won't get from *any* other vendor. Not IBM. Not Compaq. Not even those foreign manufacturers. Features like a 220 watt power supply, eight *available* expansion slots and "network ready" multi-user operation. All for only \$1495. And that price includes a 1.2MB diskette drive, 512KB memory, a fixed disk/diskette drive controller, a tactile feedback keyboard (you'll love it!) and a 6/8MHz switch/software selectable 80286 CPU.

Best of all, A★Star is quality built right here in America by Wells American Corporation - an American Stock Exchange manufacturer. So now you

can buy with confidence from a vendor you can trust, just like you've trusted IBM. And you'll get a genuine, top quality product (not a cheap imitation) for a price even less than those "questionable" mail order clones. And if that's not enough, it's all money-back guaranteed!

The \$1495 Wells American A★Star.™

A PC/AT FOR ONLY \$1495? THAT'S NOTHING TO SNEEZE AT!

(Hurry! This offer *is* limited.)

- I'm tired of sneezing! Have someone call me immediately to take my order.
- A★Star sounds terrific. Tell me more.

It's not only the most popular educational software in America. It's also the most affordable.

MICROZINE.

The computer learning library with *four* great programs on every disk. Try it *free* and find out why it won the "Best Micro-computer Software of the Year" award.

Explore MICROZINE free in your own home—with no obligation to buy!

Whether your child is just a beginner or a computer wiz, he or she can expand their problem-solving and programming skills while reinforcing math, science and language arts with MICROZINE.

MICROZINE offers your child more built-in motivation and interactive learning power than any other software designed for an Apple computer.

And MICROZINE is also the greatest value in software.

At Scholastic, it wasn't enough to create the most challenging, most exciting, best learning software ever. It had to be the most affordable, too.

So affordable, your child can examine and explore the first four-program MICROZINE disk for 10 days—*free*. And if you decide to keep it, pay only \$14.95. That's four fascinating, full-length educational programs for only \$3.74 each!

So affordable, we'll send you a new MICROZINE disk every other

month—always on a risk-free trial basis—for only \$29.95, or \$7.49 per program. Incredible, when you consider that one Apple software program alone typically costs \$35 or more. And our prices include shipping and handling.

The most powerful learning tools ever developed.

The award-winning MICROZINE series is unquestionably the highest-quality educational software available today. Based on school curriculums for children 9 to 13, each high-interest disk contains *four* original programs—so each is a library full of exciting learning opportunities.

And MICROZINE is backed by Scholastic's 65 years' experience in making learning fun. So it's no wonder more students ask for MICROZINE than any other program in their school software library.

An expanding library for an expanding young mind

Your second MICROZINE issue features *Brain Drain*, an exciting TWISTAPLOT outer-space adven-

The Funhouse Caper is a totally involving TWISTAPLOT® adventure in which your child solves three spine-tingling mysteries by questioning suspects and sleuthing for clues. The program sharpens reading comprehension and map skills.

ture that enhances reading and decision-making capabilities; *Survey Taker* which teaches children how to conduct surveys on contemporary issues; *City Blocks*, a super-imaginative graphics program in which your child creates his or her own city scene; and *Back Page*, a thoroughly engaging electronic magazine. Each MICROZINE disk comes with a clear, self-instructional User's Manual. Together,

Give your child the educational advantage of a lifetime.

Your child will receive this four-program disk

FREE for 10 days:

Inventions and Inventions brings science and database management vividly to life. Your child will probe a database of real and imaginary inventors and inventions to solve a puzzle—and pick up valuable computer application skills in the process!

Cartoon Maker enables kids to use more than 50 graphics of people, animals, fantasy characters and word balloons to create and print out their own cartoon strips. This irresistible program teaches creative writing, art and design.

Puzzler helps your child create, solve and print out crossword and "cross-number" puzzles, while building vocabulary and improving math and problem-solving skills.

they comprise a powerful educational library that will take your child to the very limits of his or her potential. And with your second purchase, you will receive free a sturdy MICROZINE file-a-disk case to hold your library disks.

Give your child the educational edge

MICROZINE furnishes the tools your child needs to compete and excel in today's fast-paced world. An extraordinary opportunity you owe it to yourself to explore—cost-free, and obligation-free.

Order your introductory MICROZINE disk today. Send in the coupon, or call our toll-free number: 1-800-325-6149. (In Missouri, call 1-800-392-2179.) It's the educational advantage of a lifetime. Now, at the price of a lifetime.

SOFTWARE GUIDE

Welcome to FAMILY COMPUTING's Software Guide, the most comprehensive listing available of two dozen of the newest, most noteworthy, and/or best programs on the market. Our reviewers include families from all over the country who have judged the software according to the following criteria: long-term benefits and applications, adaptability, and advantages of using a computer for a given task. Programs have been evaluated and rated for their performance in each of the categories listed below. More detailed reviews follow the chart. Unless otherwise noted, all programs are in disk format, and minimum memory requirements are 48K for Apple II series, 48K for Atari, 128K for IBM PC/PCjr or compatibles, and 128K for Macintosh. "Atari" alone denotes the 800/XL/XE series. "C 64/128" means the software will run on both a C 64 and a C 128 computer in C-64 mode; "C 128" alone

means the software will run only on that machine. Here's a rundown of the rating categories and what they mean: **O** = Overall performance, given the limitations and capacities of the particular computer for which the software is intended. **D** = Documentation, or the instructions and literature that accompany a program. **EH** = Error-handling, the software's capacity to accommodate errors made by the user—an especially important consideration with software for younger users. **PS** = Play system (in the games reviews), the quality of the game design and the game's playability. **GQ** = Graphics quality, also evaluated in light of each particular brand's graphics capabilities. **EU** = Ease of use after the initial learning period, which varies from computer to computer. **V** = Value for money, or how the software measures up to its price.

INTRODUCING TYPE!™

Now you can learn to type quickly, accurately and for keeps. Learning to type is neither a game nor a drag, even though the leading learn-to-type programs treat it that way.

That is to say, the leading learn-to-type programs until now. Because TYPE! is the first product to take full advantage of extensive research on how people learn to type, and combine that with the full potential of your computer.

The result? A learn-to-type program that is equally effective for business professionals and students, beginners and advanced typists.

Among other things, TYPE! combines advanced diagnostics and continuous monitoring, then customizes drills to your individual errors so that now you can learn to type quickly, accurately and for keeps.

And just because we're as serious as you are about learning to type doesn't mean we can't include a game. So we did.

? HELP

Type!

Broderbund®

You'll swear you got a new computer.

TYPE! is available for Apple II and IBM personal computers. Coming soon for Commodore 64/128. Look for it at your favorite Broderbund Software dealer or call Broderbund at (415) 479-1185. © Broderbund Software, Inc., 17 Paul Drive, San Rafael, California 94903-2101. EDUCATION/ FUN LEARNING

Alice: The Personal Pascal

HARDWARE REQUIREMENTS: 256K IBM PC.

PUBLISHER: Graham Software Corporation

PRICE: \$95

PUBLISHER'S SUGGESTED AGES: 13+

If you write programs in Pascal—or would like to—you owe it to yourself to take a look at *Alice*, a Pascal programming system unlike any other you've ever seen.

The heart of *Alice* is a Pascal interpreter. An interpreter, such as the BASIC interpreter that probably came with your computer, lets you enter and run a program as parts of one process. In contrast, most Pas-

cal products, like Borland's best-selling *Turbo Pascal*, are compilers. When you use a compiler, you need to go through at least three steps (and sometimes more) to write and run a program.

But *Alice* is much more than an interpreter. It's a well-thought-out programming "environment," including a program editor that lets you type in a program with fewer keystrokes and never allows you to enter an illegal construct. This is especially handy for Pascal, where everything must be just so, or no go.

When you start up *Alice*, you see the outline of a program on the screen. All you do is fill in the blanks! For example, type WHILE and immediately the editor provides an outline of an entire WHILE block for you. And if you make mistakes, you can undo your last steps repeatedly—and even redo some or all of the steps you've just undone. There are also extensive HELP screens available at any point, telling you what's legal to type at any moment.

Alice is not for you if you are new to computers or know nothing about

Pascal. While the tutorial manual takes you through the features in a clear and easy-to-follow way, it assumes you have a basic knowledge of Pascal programming. However, the publisher also sells a textbook that uses *Alice* to teach beginning programming concepts. And *Alice* is certainly much more useful to a novice than plain Pascals, most of which make little or no effort to help you learn the language's features.

On the whole, *Alice* is an extremely valuable programming system. It requires an investment in learning time, but it's well worth it. Once you try it, you may never want to write and debug Pascal programs any other way.

—LANCE PAAVOLA

Certificate Maker

HARDWARE REQUIREMENTS: 64K Apple, C 64/128, 256K IBM PC.

PUBLISHER: Springboard Software, Inc.

PRICE: \$50-\$60

PUBLISHER'S SUGGESTED AGES: 8+

As Dr. David Sutherland—better known to his children as the com-

Infocom introduces four new gam

Infocom,™ the crazy people who brought you "Zork"® and "The Hitchhiker's Guide to the Galaxy,"™ has a habit of coming up with games that add a new dimension to interactive fiction. And the best keeps getting better. Case in point: "Leather Goddesses of Phobos."™ It has a scratch n' sniff card and a 3-d comic book to excite all your senses. Once your interest is

piqued, you'll embark on a rowdy romp through the solar system. This hilarious spoof of 1930's pulp science fiction has 3 "naughtiness levels," for the prude to the lewd. "Leather Goddesses" is sure to amuse members of either sex.

One's really warped.

Then there's "Trinity."™ It answers the question of whether a game can be both light-hearted

and profound. You journey through a time warp into a mischievous fantasy world where all atomic explosions are mysteriously connected. "Trinity" takes you back to the dawn of the atomic age and puts the course of history in your hands.

One's a real circus.

It has been said that the circus is the only really mysterious thing left in civilization.

One thing's for sure, there is plenty of mystery in "Ballyhoo."™ While trying to locate the circus owner's kidnapped daughter, you are somersaulted into a three-ring world of deception and crime. To solve the crime

SOFTWARE REVIEWS

puter doctor—tore into the package, he gleefully exclaimed, "Wow, I've been wanting to try this!"

"This" is *Certificate Maker*, a simple-to-use software package that helps you create personalized certificates with both comic and serious graphics and themes. You begin by choosing MAKE CERTIFICATE from the straightforward, on-screen menu. As you're prompted for the number of the certificate template you want to use, you'll reach for the non-threateningly short manual where the 220 templates are pictured. They range from such comic choices as the

"Rude Awakening Award"—with a picture of a gorilla leering over a horrified man in bed—to scholastic, athletic, and religious awards. There are also blank awards, some with pictures and others with no graphics at all.

Next, you're asked for a border type (24 different patterns and a no border option). As the cursor lands on each type, that design is shown bordering the screen. Similarly, a sample is shown at the bottom of the screen when you're choosing one of the five type faces. A regular or a large type size is available for each line, and your text is automatically centered.

When you move on to the print menu, you can keep your startup printer configuration or change the setup. Dozens of dot-matrix printers are supported, so yours probably is, but check before buying. Printing out the certificates is easy, and the quality is very good.

Everyone in our home found the software fun while making awards for family and friends. Heather, age 7, and a new reader, managed with

little assistance, while Davy, age 3, could join in making choices because of the package's use of graphics. *Certificate Maker* is also ideal for schools, clubs, and other organizations.

—BETTY J. SUTHERLAND

Geometry

HARDWARE REQUIREMENTS: 512K Macintosh.

PUBLISHER: Sensei Software, published by Broderbund

PRICE: \$100

PUBLISHER'S SUGGESTED AGES: 15 +

I always wished my geometry teacher had a blackboard that could be animated. *Geometry*, a new program for the Macintosh, makes that wish come true. Diagrams of triangles, parallelograms, and circles slowly rotate through several planes, displaying angles, lines, and relationships in a way I could understand far better than an unmoving book.

This package is an excellent resource for a geometry student since it can be customized to match the textbook used in class. It's even similar to a book: the program is ar-

es. One really smells.

Every package includes an integral set of props to excite your senses and enhance the game.

and save your hide from a permanent spot in the freak show, you'll need to stretch your puzzle-solving skills to the limit.

One's really haunting.

Wrapping up this new quartet is a classic gothic mystery set in a haunted castle on the mist-shrouded seacoast of Cornwall. In "Moonmist"™ you'll explore the darkest reaches of Tresyllian

Castle and get involved with an eccentric cast of characters, including British nobility, while trying to save your best friend from a vengeful ghost. "Moonmist" offers four distinctly different sets of clues, problems, solutions and hidden treasures. So you'll die to replay it again and again.

All four are easy to get.

Simply follow your nose to your local software store today.

INFOCOM™

CIRCLE READER SERVICE 13

SOFTWARE REVIEWS

ranged by pages, and you "turn" an on-screen graphic page with the mouse button. The table of contents displays 10 chapters, starting with a discussion of points, lines, and planes; moving through congruence, parallel lines, parallelograms, etc.; and arriving at coordinate geometry and areas and volumes of solids. You also may select any chapter at any time, even if you're in the middle of a proof.

Two parallel streams run through the material: tutorials and problem sets. You can select to see only one at a time or a mixture of both. Tutorials take advantage of the Mac's click-selection capability and allow personalized study. For example, when discussing line segments, the program directs you to "click any bold-faced term to see an example." The examples are displayed upon a line segment containing a series of points and in turn flash to clearly demonstrate their features. Proofs are offered as tutorials and as problems. If you goof, the program tells you patiently "That is the wrong answer. Please try again."

At one point, I was reviewing the *Geometry* program at home with a borrowed Macintosh. My teen-age daughter, watching me struggle with the same proofs she was working on for school, asked when we were going to buy a Mac. When an educational program makes a teen-ager want to get a computer, that's one fine program. That's *Geometry*.

—MARLENE BUMGARNER ELTGROTH

HOME BUSINESS & PRODUCTIVITY

RightWriter 2.0

HARDWARE REQUIREMENTS: 192K IBM PC/PCjr.

PUBLISHER: DecisionWare, Inc.

PRICE: \$95

You've just finished the first draft of a report. Since you are eager for the final draft to be especially well written, you seek the opinion of a professional.

"Your report is not difficult to understand, though you can improve it. For example, you might use the active voice more often. You can also shorten and simplify some of the sentences and paragraphs. In a few places you can eliminate weak language. And consider using more widely understood words."

"That's easy for you to say," you reply. "How about some specific examples?"

"Well, your first sentence is long; consider shortening it or breaking it into two separate sentences. The second sentence might be stronger if it didn't begin with the word 'But.' In the fourth sentence, consider omitting the weak phrase 'It would seem that . . .'. In the same sentence, are you sure your readers will know the word 'sanguine'?" And on and on the comments go.

If your ego can tolerate such criticism, *RightWriter* may be the most useful software package you buy this year. The program analyzes each sentence in your document and inserts comments and suggestions for improvement where they are appropriate. In addition, it provides summary comments on overall readability, strength of writing, use of adjectives and adverbs, use of jargon, and unusual vocabulary.

It's so simple to use, too. Just type RIGHT, the name of the text file to be analyzed, and press RETURN. In almost no time, *RightWriter* puts an edited copy of your text on disk. Then, use your word processor to print it out or make changes in the original document.

That same simplicity makes *RightWriter* especially appropriate for family use. In addition, it only points to potential improvements in a document. You must then decide which suggestions would actually improve the writing. As a result, the more you use *RightWriter*, the more sensitive you will become to common weaknesses in your own writing. In the process, you learn how to differentiate between strong and weak writing.

I rarely recommend software as a "Must Buy!"—but in the case of *RightWriter*, four stars throughout!

—TONY MORRIS

The Personal Choice Collection

HARDWARE REQUIREMENTS: 128K Apple IIe/IIc, C 64/128, IBM PC/PCjr.

PUBLISHER: Activision

PRICE: \$100-\$120

While the word processor, data base, and spreadsheet that make up *The Personal Choice Collection* are all available separately (at \$40 to \$50 each), together they act as an integrated series. Reports from the spreadsheet and data base are easily transferred into the word processor.

Writer's Choice is a straightforward and comprehensive writing tool. Standard features include cut-and-paste, headers and footers, and a preview mode. On the C 128 version I looked at, it utilized the extra keys very well. Just a press of the HELP key, for example, called up immediate assistance when I ran into trouble. Included with *Writer's Choice* is *Spell Right*, a 50,000-word spelling checker. It worked well enough; unfortunately, it had to be booted separately, after I saved my document.

The data base, *Filer's Choice*, was more full-featured than I expected. Complete with a report generator, it lets you make calculations between fields and perform complex searches using such criteria as *greater than* or *less than*. I could design my form with fields anywhere on the screen, with the leeway to use up to 80 lines for the form.

Planner's Choice, the spreadsheet, is more like the word processor in the familiarity of its features. Cells are labeled from column AA to JU with 255 rows, giving you 65,025 cells (although all are not usable in a single spreadsheet). The screen can be divided into two windows, which let me compare two distant sections of any spreadsheet. Tapping the ALT key whisked me from window to window, so I could change information as needed.

While printing out a document from any of the three modules is easy, I was disturbed that the package did not support my printer's (the fairly common Okidata 92) capabilities for underlining or boldfacing. Everything worked fine on an Epson, but check to see if all enhancements work with your printer prior to purchasing this series.

All in all, while not special in any way, these productivity programs ran well and should be more than

satisfactory for home or small business use. Considering the price, they're excellent values indeed.

—JUDITH ZORNBERG

TimeLink

HARDWARE REQUIREMENTS: Atari ST, Macintosh.

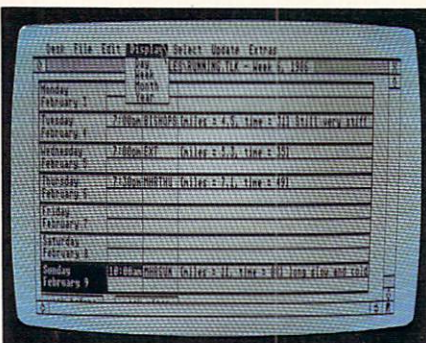

PUBLISHER: Batteries Included

PRICE: \$50

When I was in college, I always drew up a weekly schedule. It was the only way I could organize my classes, studying, working, and what social time I could squeeze in. Life after college has been more of the same, juggling work, writing assignments, meetings, dates, and golf games.

TimeLink is designed for busy people like me. This time management program does more than schedule appointments, though. It keeps track of how long you spend on a particular project or client, searches for activities by specific keywords or dates, calculates the time between two points, and prints your schedule.

Entering appointments is easy, since the program accepts the time and date in a variety of ways. For instance, you can enter 2:00 p.m. as 2:00p, 14:00, 2p, or simply 2 (hours for 1 to 7 are assumed to be p.m., since they're the afternoon hours of a normal business day). Dates are displayed in windows, and you can view appointments by the day, week, month, or year.

When writing an appointment's description, words wrap at the end of a line, just like on a word processor. Your text can be highlighted and cut or copied to be pasted in elsewhere. Entire appointments can also be copied. So, for example, if there's an activity you do every day, like jog or go out to lunch, just copy the entry and edit the time and date.

A keyword can be added to your appointment, which makes it easy to

When you make a better learning toy, it speaks for itself.

ANNOUNCING THE CURE FOR WRITER'S BLOCK

For Apple II series, 64K, Tandy 1000, IBM PC and compatibles

The easiest way to make your first draft your final draft.

It's not that most writers lack ideas. Usually you have too many of them. The problem is organizing them. Outlining your facts into meaningful order so your writing flows easily and smoothly.

Now there's help. FIRST DRAFT from Scholastic. The planning, outlining and writing tool designed specifically for writers who use a word processor.

The brainstorming tool that simplifies the toughest writing jobs.

FIRST DRAFT works for all kinds of writing: term papers, sales presentations, newsletters and reports of any type. The perfect writing partner, FIRST DRAFT helps you gather your thoughts through brainstorming. Then it automatically numbers, ranks and sorts each idea. You can build, rearrange, expand and collapse your outline—all with a single keystroke. And you can search, replace text, enter paragraphs, merge one outline with another and print out your finished draft.

Turns your basic word-processor into a sophisticated writing tool.

Best of all, FIRST DRAFT can insert your outline or draft into any major word processor for final editing and formatting. So you don't lose a minute translating your ideas into a finished document. And with FIRST DRAFT's outlining and brainstorming functions, your word processor becomes state-of-the-art. The price for all this help? An easy \$69.95.

Examine Risk Free for 15 Days.

If you need strong medicine for your next writing assignment, see your local computer store or send in this coupon. If, after 15 days, you're not satisfied, return the package in resaleable condition for a full refund. **Credit card orders call 1-800-325-6149.**

Offer valid through March 31, 1987.

search for a particular event. It also helps you figure out the time spent on a project, which, along with a feature that adds up expenses associated with an appointment, can help with billing.

Best of all, *TimeLink* requires little time to learn, since it uses the Atari ST or Macintosh menus and point-and-click mouse techniques. The manual is brief but includes useful examples.

While *TimeLink* has obvious business applications, it's also useful at home to schedule daily appointments within a family or to track how much you spend on items such as take-out dinners. Besides my word processor, it's one of the most useful programs I own. It gives me a lot more information than my old, handwritten schedule could, and it's also fun to use. —MATTHEW STERN

ing two computers lets gamers compete across the room or across the country by modem. It's exciting to see your and your competitor's ships on-screen simultaneously. You can even send brief messages to each other during the race.

For those who prefer speedboating (including those who are frustrated by the sailing game's tough play system), alternate races can be run in a fast, little motor boat.

As detailed as *Flight Simulator*, and with the same practical teaching applications, *The American Challenge* is a first-rate program.

The Chessmaster 2000

HARDWARE REQUIREMENTS: Amiga, Apple IIe/IIc, Atari, Atari ST, 256K IBM PC/PCjr, 512K Macintosh.

PUBLISHER: Software Country

PRICE: \$40-\$45

CRITIC'S SUGGESTED AGES: 10+

Not only does *Chessmaster 2000* pack in practically every feature we've run across in other chess simulators, it also incorporates a new chess algorithm that makes it a top-level player. Boasting the world's largest library of opening moves (over 71,000), this program works equally well as a tutor for beginners, an opponent for novice to expert players, and a crack analyst of your own game problems.

Beginners are offered every possible aid to learn chess, including a special mode that shows where moves can be made, various play hints, and a feature that lets you replay an entire game with a move-by-move analysis.

As players improve, or for experienced hands, *Chessmaster* shows greater and greater expertise. Great matches from history are on disk to replay, and there's a "watch the *Chessmaster 2000* think" mode in which you can see the analytical functions of the program at work.

for more information on how you can succeed with *Success With Typing*.

Perhaps the most important program you could ever buy is now at your fingertips.

A TYPING TUTOR AND COMPUTER COURSE IN ONE.

It's called *Success With Typing*. The first software course that not only teaches you how to type, but teaches you what to do once you know how—namely, word-processing and database management.

A TYPING COURSE THAT DOESN'T STEREOTYPE STUDENTS.

First, you develop fluidity in touch typing through a series of 18 highly personalized lessons. You work at your own pace. Get instant feedback on your progress as well as your errors. Receive specific advice on areas that need work. You even design tests for yourself. All the while, you learn the typing technique that has been proven most effective for computer use: the

"territorial" method, which helps you easily incorporate all of the special computer keys.

THE KEYS TO UNLOCKING YOUR COMPUTER.

Then, once you're a master typist you learn the building blocks of personal computer use.

First, the concept, structure and set-up of a data base, one of the computer's most important business applications.

And then, a lesson on word-processing, the skill that has turned the computer into the world's most valuable tool.

This revolutionary software package is available at your computer or software dealer for only \$49.95 complete, including an easy-to-use manual and two 5¼" disks.

So discover *Success With Typing*. A keyboard course so comprehensive, virtually the only thing it doesn't provide is fingers.

THE QUICKEST ROUTE FROM COMPUTER MYSTERY TO COMPUTER MASTERY.

For Apple II series, 64K, Tandy 1000, IBM PC and compatibles

SOFTWARE REVIEWS

The graphics are superb, with revolving 3-D and 2-D boards giving you views from the side and overhead. Above all, there's the game itself—sophisticated yet easy to play with. *Chessmaster 2000* is one of the year's best.

Gettysburg: The Turning Point

HARDWARE REQUIREMENTS: 64K Apple, Atari, C 64/128.

PUBLISHER: Strategic Simulations, Inc.

PRICE: \$60

CRITIC'S SUGGESTED AGES: 12 +

When it comes to the Battle of Gettysburg, I've played every war game I could get my hands on. Yet none compare to the new computer simulation, *Gettysburg: The Turning Point*.

This remarkably detailed game covers any one day, or all three days, of the battle which many historians feel changed the balance of the American Civil War from the South to the North. Players maneuver their armies from dawn to dusk each day, jockeying for position to seize key points on the battlefield.

The brilliant play system allows a degree of reality never as well achieved before. You adjust your unit's effectiveness on the basis of multiple factors—morale, fatigue, movement, position, formation, visibility, light conditions, leadership, and command control, among others. The battle is not won or lost by combat alone but by the wide use of resources so essential in the makeup of a great general.

Variable play levels allow gamers, whether beginning or experienced, to play each other or the computer on a relatively equal footing, too. Add the usual fine options included in most SSI war games, and you have *Gettysburg*—the best strategy and tactics game we've seen this year.

—REVIEWS BY JAMES DELSON

LEARN PROGRAMMING

MASTER COMPUTERS IN YOUR OWN HOME

Now you can write programs and get a computer to do just what you want. Get the most out of any computer, and avoid having to pay the high price of pre-packaged software.

LEARN AT YOUR OWN PACE IN YOUR SPARE TIME

Our independent study program allows you to learn about computers, operations, applications and programming in your spare time, at home. Our instructors provide you with one-on-one counseling.

LEARN EVEN BEFORE YOU DECIDE ON A COMPUTER

Everything is explained in simple language. You will enjoy learning to use a computer—EVEN IF YOU DON'T OWN ONE. Learn to program on any personal computer, IBM, APPLE, COMMODORE, TRS, and more.

BE YOUR OWN COMPUTER EXPERT

Programming is the best way to learn to use computers, and we can show you the best—and most economical—way to learn programming! Send today for your free information package. No obligation. No salesmen will call.

CONVERSE WITH YOUR COMPUTER

AT LAST! A FULL IMPLEMENTATION of the original ELIZA program is now available to run on your personal computer!

Created at MIT in 1966, ELIZA has become the world's most celebrated artificial intelligence demonstration program. ELIZA is a non-directive psychotherapist who analyzes each statement as you type it in and then responds with her own comment or question—and her remarks are often amazingly appropriate!

Designed to run on a large mainframe, ELIZA has never before been available to personal computer users except in greatly stripped down versions lacking the sophistication which made the original program so fascinating.

Now, our new personal computer version possessing the **FULL** power and range of expression of the original is being offered at the introductory price of only \$45. And to let you find out how she does it (or teach her to do more) we have included the complete **SOURCE PROGRAM** (written in BASIC) at no extra cost.

Order your copy of ELIZA today and you'll never again wonder how to respond when you hear someone say, "Okay, let's see what this computer of yours can actually do!"

READ WHAT THE EXPERTS SAY ABOUT OUR VERSION OF ELIZA:

"Much more than a mere game... You'll be impressed with ELIZA... A convincing demonstration of Artificial Intelligence."
 —PC MAGAZINE

"Delightful entertainment... An ideal medium for showing off your system."
 —MICROCOMPUTING MAGAZINE

"ELIZA is an astounding piece of software... A fascinating program to use and study."
 —BARON'S MICROCOMPUTER REPORTS

"ELIZA is a great way to introduce your friends to computers... A very funny party game."
 —PETER A. McWILLIAMS

"ELIZA is an exceptional program, one that's fun to use, shows off your machine, and has great historical interest."
 —POPULAR COMPUTING MAGAZINE

"This version of ELIZA is the best we have seen. As a party game, it is unmatched."
 —HOME APPLICATIONS FOR THE C-64

ELIZA IS AVAILABLE IN THE FOLLOWING FORMATS:

- IBM PC, PCjr, PC-XT and all compatibles.
- All Apple II computers (II, II Plus, IIc)
- Apple Macintosh (Microsoft BASIC required)
- Commodore 64 (specify disk or cassette)
- 5 1/4 inch or 8 inch disk for all CP/M systems

All versions are \$45 and include a six page users manual. Please add \$2.00 shipping and handling to all orders (California residents please add 6 1/2% sales tax)

HOLIDAY GIFT GUIDE

DESIGN NEEDLECRAFT CHARTS

for Counted-Cross-Stitch, Needlepoint, Latch Hook, Knitting, etc. using a revolutionary new computer program--

The Stitch Grapher.

Graphs as large as 240 X 400 stitches with up to 30 symbols may be generated and printed with any of 3 grid styles along with a color chart. A unique windowing feature allows the designer to move, copy, rotate, mirror image, save and re-use previous designs.

The Stitch Grapher is compatible with the 64K Apple II and 256K IBM-PC microcomputers. Disk plus 90-page spiral bound manual--\$89.95. Dealer inquiries welcome. To place an order, or for complete information contact

COMPUCRAFTS

RFD 2 Box 216, Lincoln, MA 01773
(617) 259-0409

Apple version supports the Imagewriter and Scribe printers directly (depicted grid style is available for these printers only). Other dot matrix printers require graphics capable interface card or separate support software. IBM-PC version supports IBM/Epson compatible printers.

PROTECH™ YOUR DISKS With a Better Travel and Storage System!

The Product:

Five reinforced, heavy-duty, anti-static vinyl jackets. Each hold four 5-1/4" floppy disks (20 disks total storage). These jackets can be stored or used independently of the premium quality ring binder included. Mix and match units to build the system that meets your needs.

The Advantages:

You get maximum protection, versatility and convenience. Toss, turn and flip them, the disks can't fall out. These jackets travel well in an attache case, even use them as a mailer. They store on top of a desk or can be hung in a file cabinet or draw. Color coded for fast, easy identification. Only \$29.50 per unit.

Send check or money order to: ROBERT WEST (201) 925-0414
626 East Elizabeth Ave. • Linden, N.J. 07036

\$ "I Saved Time and Money with Physical Exam."

I use a data base program to keep records for our club. Last week I experienced read errors. Luckily I have a 1541 Physical Exam program. The alignment test confirmed what I had suspected, my drive was out of alignment. I am happy to report that I aligned my drive MYSELF. I avoided the wait for repair and paid a fraction of the cost.

Package includes: • True digital alignment disk with offset tracks. • Mechanical Stop Test • Speed Test • Instructions for performing alignment, adjusting speed and stop position. • Hard copy mode to print test results for future reference.

Physical Exam is available for these drives: 1541, 1571, 8050, 8250, 4040, SFD 1001. PLEASE SPECIFY DRIVE! \$39.95 EA + SHIP

Attention all FX80, FX100, JX, RX, & MX owners: You already own half of a great printer

Dealer
inquiries
welcome.

Now
Only
\$79.95

Now for \$79.95 you can own the rest. You see, today's new dot matrix printers offer a lot more.

Like an NLQ mode that makes their letters print almost as sharp as a daisy wheel. And font switching at the touch of a button in over 160 styles. But now, a Dots-Perfect

upgrade kit will make your printer work like the new models in minutes— at a fraction of their cost.

And FX, JX and MX models will print the IBM character set, too.

So, call now and use your Visa, MasterCard, or AmerEx. Don't replace your printer, upgrade it!

READER SERVICE FREE INFORMATION

Readers are invited to learn more about our advertisers' products. This is a free service to FAMILY COMPUTING readers. Follow the directions below and the materials will be sent to you promptly and free of charge.

1. Circle the number(s) on the card that corresponds to the key number appearing on the advertisement. For advertisements with no number, please consult your local retail outlet or write to the address listed.
2. Simply mail the card. Postage is necessary. The literature you requested will be mailed to you directly, free of charge by the manufacturer.
3. Print or type your name and address on the attached card. To receive the requested information, answer all questions on the reader service card.
4. Circle number 138 on the reader service card if you wish to subscribe to FAMILY COMPUTING. You'll be billed for 12 big issues for only \$19.97.
5. Do not use the card for change of address. Please use the subscriber service form in the magazine.

Your kids.

As you already know, your kids consider themselves experts on a number of subjects.

Cars. Clothes. Junk food. Music. Film. TV. And juvenile funding — otherwise known as “the allowance.”

But what you may not know is that your offspring

are eminently qualified to advise you on a highly technical and often adult-intimidating subject:

Computers.

Largely because they're probably using them in school. And if you ask them which personal computer

OK, the answer is Apple II.

This year there are three Apple II's to choose from. Each runs over 10,000 programs — including the greatest number of quality programs for kids, and some of the most popular productivity programs for adults.

So which one do you choose?

Read on, and we'll make it easy to decide which one of our family is right for your family.

THE APPLE IIc. READY, PLUG, GO.

The IIc is our easiest-to-get-into Apple II. Not just financially, but physically as well.

Because it comes ready to run right out of the box. With built-in equipment that would cost hundreds

of dollars more on another computer system. Like 128K of memory. A built-in disk drive. And built-in peripheral cards that let you add accessories like printers, modems and extra disk drives just by plugging them in.

So your child will be able to start using the IIc almost as soon as you can get it home. To learn reading, writing or just about any other subject. Because almost every top-selling education program available can run on an Apple IIc.

Add an ImageWriter™ II printer and your child can print out his or her handiwork in dazzling color.

All this is not to say the IIc is child's play. With its easily transportable 7½ pound weight* and its new-found ability to expand to a full megabyte of memory,

**A monitor and power supply will add a few pounds.*

Now for the next question.

the IIc is powerful and flexible enough to handle just about any adult job.

Like word processing. Home finance management. Record keeping. Even small business accounting. After all, kids aren't the only ones with great ideas.

THE APPLE IIe. MILLIONS OF KIDS WON'T SIT STILL FOR ANYTHING ELSE.

There was a time, not very long ago, when if you wanted a child to remain stationary in an educational setting, you had limited options.

You could feed the child cookies.

Or encourage the child to rest for an hour or so.

Then along came the Apple IIe.

Suddenly, even the most kinetic youth were more than happy to sit still for hours on end learning whatever interested them. Because teachers had a new tool to make everything more interesting.

All of which has made the Apple IIe the leading computer in education.

The key to its popularity is the flexibility it offers to anyone who chooses it — the IIe is the computer that can grow with you and your family.

It comes with 128K of memory. Built-in features like 80-column text display for word processing. And graphic capabilities for colorful charts and drawings.

Best of all, the IIe comes with "expansion slots" —

If you want
to know which
computer to
get your kids,
ask the experts.

When you buy an Apple II you're buying Apple, too.

No matter which Apple II you choose, you can be sure of one thing: we stand behind every Apple you sit behind. We'll be there to help you in any way we can.

And, it just so happens, we can help you in a lot of ways. Especially now, before the holidays.

For starters, there's our Apple Credit Card. Which, if you qualify, can get you credit of up to \$2,500 right on the spot.

And right now, there's an Apple Holiday Bonus.* Buy any basic Apple II system and get half off on any additional Apple peripherals or software you buy, up to \$500. You'll also get a free 3M® Apple Care Kit with diskettes and other accessories to help you get started.

But you'll find that Apples aren't just easy to buy, they're easy to live with.

Have a question that's not covered in our manuals or free tutorial disks? Your authorized Apple dealer will be happy to answer it in the kind of detail you usually have to watch public television to get. Thanks to AppleLink™, our exclusive electronic information network, they always have up-to-date answers.

If you feel like talking Apples with a fellow owner, there's a toll-free 800 number that will put you in touch with a local Apple User Group. An association of men, women, and children more than willing to share information, insights, and an occasional potato chip.

Of course, Apples are the gold standard of computer reliability. But, for a small annual fee, you can enjoy the added security of AppleCare®, the gold standard of extended service plans.

Rest assured: when you show your support by buying an Apple II, we'll never stop showing ours.

The power to be your best. 

* Offer valid from November 1 through January 10. Apple, the Apple logo and LaserWriter are registered trademarks of Apple Computer, Inc. AppleCare is a registered service mark of Apple Computer, Inc. ImageWriter, Apple IIgs, AppleLink, AppleWorks and AppleMouse are trademarks of Apple Computer, Inc. Macintosh is a trademark of McIntosh Laboratories and is being used with their express permission. 3M is a registered trademark of Minnesota Mining and Manufacturing Company. Printed in the USA.

that's computerese for room to grow. So you can add everything from hard disk storage to the user-friendly, point-and-click AppleMouse.™

And with adult programs like AppleWorks™ — that can help you do everything from household inventories to tax preparation — you may be tempted to spend a few hours sitting at an Apple IIe yourself.

It's a workhorse of a computer that can start off simple and continue to expand as you see fit.

All the way up to the full capabilities of the brand new Apple IIgs™ — the little colossus parked on its right.

THE NEW APPLE IIgs. THE MOST POWERFUL APPLE II IN HISTORY. AND EVERY OTHER SUBJECT.

To say that the IIgs is the most amazing Apple II ever built would be an understatement.

It has all the features and high technology that at one time would have been reserved only for the very, very rich or certain covert government operations.

The G stands for Graphics. With a capital G.

Because it can reproduce 4,096 colors (for those at home keeping count, that's 4,024 colors more than you get in the jumbo pack of crayons). Everything from good old blue to pale violet to electric red to all those colors in between. All in high-resolution graphics.

The S in IIgs stands for Sound. As in Symphonic.

The IIgs has a 15-voice digital sound chip — the kind you find in sophisticated music synthesizers. So it can reproduce everything from the subtleties of human speech to the splendor of a philharmonic orchestra.

And the IIgs is easy to use. Because it works the same friendly way Macintosh™ does. With windows, pull-down menu bars and the now-famous AppleMouse.

How does the IIgs do all this? With a 16-bit microprocessor and 256K of memory (expandable to an awesome 8-megabytes).

Of course, the IIgs is still an Apple II. So it can run the vast library of Apple II software. But up to three times faster than any other member of the family.

And it's inherited the best traits of both its siblings. Like the IIc, it's ready to run right out of the box. And like the IIe, it can grow any which way you want.

You can add options like an ImageWriter II. An Apple LaserWriter® printer. An Apple Personal Modem. Or Apple's new Hard Disk 20SC that can store up to 20,000 typewritten pages.

So even though it's great for teaching art and music to kids, it has enough power to run a fair-sized family business. Like Saudi Arabia.

Of course, the question remains: does this kind of power belong in the hands of a minor? Yes.

Because as with every Apple II, it's nothing more nor less than the power to be your best.

EVERY SEASON, YOU'LL BE SEEING MORE NEW PROGRAMS.

Of course, there are lots more programs for the Apple II family than for any other personal computer in the world.

And our software list is getting longer all the time.

Take educational software.

We write our own programs, like Apple Logo, which teaches children to write *their* own programs. At the

Apple II's can now run Macintosh-like software with a mouse and point-and-click commands.

same time, we also encourage other education software developers to provide innovative learning solutions.

From special tools that help disabled students get an even break to courseware that helps ordinary students advance at extraordinary rates.

And education is just half the story.

Some of the best-selling productivity software in the world runs on Apple II's. Word processing programs. Spreadsheets. Databases. Accounting packages. Even communications programs to tap into a whole world of electronic information services.

So when your kids aren't busy using the Apple II for their homework, you can use it for yours. Running your business, balancing the household budget, tracking the stock market or doing a hundred other things.

Maybe even something educational.

To help you get more out of our huge software library, there's a huge reference library.

they're using, chances are they'll say an Apple® II.

It's the leading computer in education.

And one of the most popular computers in the larger world. Nearly 3,000,000 Apple II's are helping people in virtually every field of human endeavor.

So you can get as much out of one as your kid can. Which is why it makes so much sense to consider having an Apple II at home.

Besides, it's the only sure way to make your experts as expert as they think they are.

Take Hi Tech Home For The Holidays!

All you need is JingleDisk, your PC and printer, a little Holiday PrinterPaper and you'll create unique holiday cards even Santa won't forget!

After the cards are out and the gifts are given, just boot up your computer, turn up the sound and let JingleDisk entertain with Yuletide carols and vivid animations.

Available for Apple, Atari, Commodore and IBM formats.

PERIPHERAL PRODUCTS FOR YOUR ATARI, COMMODORE AND APPLE

MICROPRINT 2000

MICRO MERICS MICROPRINT 2000 delivers big performance without knocking a big dent in your budget. This wonderfully affordable, fast 120 CPS, letter quality built-in, DO⁷ MATRIX PRINTER has all of the features usually found only in more expensive models. MICROPRINT 2000 has graphics modes, tractor/friction feed, foreign language characters, bidirectional printing, snap-in cassette ribbon, user replaceable head, and standard parallel interface. With serial interface option, and fine near letter quality, it is no longer necessary to transfer your draft to the typewriter.

PARALLAX-AT

MICRO MERICS PARALLAX-AT is one of the best graphic and letter quality printer interfaces available for ATARI[®] computers. Guaranteed to meet all of your ATARI printer interface requirements, the PARALLAX-AT works with all ATARI[®] computers and all popular dot matrix printers. The PARALLAX-AT has an extra serial port to daisy chain other peripherals. It's easier to set up, has more printing modes, and a wider range of applications than any other printer interface on the market. PARALLAX-AT has a proven track record of being one of the most reliable printer interfaces available today.

MICROBUFFER

MICRO MERICS MICROBUFFER lets you keep working while your printer keeps printing. Stationed between your printer interface and your printer it stores the output from your computer until the printer can finish printing. Available with 32K of memory, or, for larger jobs, 64K.

MICROMODEM-AT

MICRO MERICS MICROMODEM-AT is a standard 300 baud modem that provides excellent performance for the ATARI computer user. It is designed to connect directly to any ATARI computer and to a standard modular phone cord. It uses the Bell 212A/103 protocol to allow connection to any Hayes or Bell standard modem, and features both auto-dial and auto-answer.

MICROMODEM-1200

MICRO MERICS MICROMODEM-1200, is a full feature 300/1200 baud modem. MICROMODEM-1200 comes pre-cabled to directly connect to your ATARI or COMMODORE computer, or with an RS-232 cable to connect to APPLE[®], IBM[®], or other popular computers. MICROMODEM-1200 is fully compatible with the Hayes command set and uses the Bell 212A/103 protocol to connect with the most popular modems all over the world. MICROMODEM-1200 features 8 LED's to indicate High Speed, Carrier Detect, Receive Data, Modem Ready, Answer Mode, Off Hook, Send Data, and Terminal Ready. For ease of use you can reselect communication options through the MICROMODEM-1200's 8 outside accessible switches. A top of the line modem, at an amazingly affordable price, MICROMODEM-1200 is all the modem you need.

PARALLAX-CD

MICRO MERICS PARALLAX-CD lets owners of all COMMODORE[®] home computers connect any letter quality or dot matrix parallel printer to their system. PARALLAX-CD emulates COMMODORE's own 1525 graphic printer when used with any other printer interface. All switches are externally accessible, and settings are clearly marked on the cover. PARALLAX-CD uses Compute Gazette mnemonics, and features 22 available print modes. It is simple to use, yet still allows the flexibility an expert programmer may need.

MICROMODEM-CD

MICRO MERICS MICROMODEM-CD, like the AT, is a standard 300 baud modem, providing excellent performance and value for any COMMODORE computer user. It connects directly to a standard modular phone cord. It uses the Bell 212A/103 protocol to allow connection to any Hayes or Bell standard modem, and features both auto-dial and auto-answer.
